Music-Gen v3 SPINE-2 Milestone — Fanout Clone 0: c23 Reproduce-Proofs on Chicken Grease and Rome (Cycles 1- 3)

Abstract

This report covers Cycles 1 through 3 of a fanout-clone branch spawned from the Music-Gen v3 campaign to execute the c22-deferred reproduce-proofs on the operator-blessed Chicken Grease and internal-gate-accepted Rome deliveries via the c22 unified `scripts/v3_spine/recreate_v3.py` driver. The clone (fork `d5530f8d1ccc`, clone 0) was assigned to prove that the c22 unified driver, when invoked in `--reproduce-check` mode against the two existing on-disk deliveries, produces panel outputs that match the originals within the rubric-defined per-key tolerances, thereby unblocking the c24 execution of the `_infra/retire-oneoff-drivers-c22` deletion contract (which would retire 37 catalogued per-song scripts). Cycle 1 pinned the rubric document `docs/v3_reproduce_proof_c23_rubric.md` (SHA `3fe5545bfce62723a9c9faf7391e6ad8f31a1731cde18641569e419d772f792e`) before any script under `scripts/v3_reproduce_c23/` and delivered both reproduce-proof reports plus the required output artifact `docs/v3_reproduce_proof_c23_report.md`. Both per-song verdicts fired mechanically as `REPRODUCE_PANEL_ONLY` per the rubric's frozen enum: panel equality holds on every key with delta magnitudes at the sixth-through-eighth decimal place (well inside the rubric's per-key tolerances), and byte equality on the panel JSON/TSV artifacts is honestly false because the two anchor deliveries pre-date the `c22 env_pin.json` manifest and thus fail the byte-equality gate that requires environment-pin identity. This is a first-class mechanism-of-record outcome per Fixed Decision 1 — the rubric's byte-equality gate honestly downgrades from `LANDS` to `PANEL_ONLY` when the environment-pin diff cannot be established against a null anchor, rather than smoothing over the drift or retrying. Cycles 2 and 3 were re-verification passes that live-checked every anchor byte-identically and closed the branch with `COMPLETE` and `[[BRANCH_COMPLETE]]` under the `<no-null-cycle-validation>` rule. The c24 execution of the

retirement deletion contract is now pre-authorized.

1. Introduction and scope

Cycle 22 landed the unified v3 driver scripts/v3_spine/recreate_v3.py and the accompanying env_pin.json manifest for future deliveries, plus a first-unified-driver delivery on Peach Dream to demonstrate the driver end-to-end. The c22 delivery catalogued 37 per-song one-off driver scripts as candidates for retirement under data/v3/recreate_v3/retirement_catalog_c22.json, but the retirement was gated on a reproduce-proof: the unified driver must be shown to reproduce the operator-blessed Chicken Grease delivery and the internal-gate-accepted Rome delivery within rubric-defined tolerances before the one-off scripts can be safely deleted.

Cycle 23 deferred that reproduce-proof to a subsequent cycle. This branch is that cycle: fork d5530f8d1ccc, clone 0 executes the c22-deferred reproduce-proofs on both Chicken Grease and Rome. Sibling clones in the same fork run other opening work (M-V3-RULES-1 first activation on clone 2; other downstream work on clone 1); they are reported separately.

The clone's scoped objective as issued:

- **Pin the rubric document** docs/v3_reproduce_proof_c23_rubric.md before any script under scripts/v3_reproduce_c23/, with a three-way rubric_hash_v3_reproduce byte-equality chain.
- **For each of Chicken Grease (31a164f845f8e27e) and Rome (51e433ade2a845e1)**, invoke scripts/v3_spine/recreate_v3.py --song <sha16> --section operator --reproduce-check <existing-delivery-dir> and emit data/v3/reproduce/c23/<sha16>/reproduce_report.json with per-stage diff, per-key panel diff, and env-pin diff-vs-original-manifest.
- **Verdict enum:** REPRODUCE_LANDS / REPRODUCE_PANEL_ONLY / REPRODUCE_FAILS per the rubric.
- **Preserve read-only anchors** byte-identical pre-versus-post: Chicken Grease c5 operator-blessed WAV cc919559b4508b6b..., Rome c20 verdict d2c2d704ce910fde..., c33 render_stem.py 214372d9...5b2b, c22 rubric anchor, c4 canonical serializer.
- **Panel-equal required always;** byte-equal required where env pins unchanged. Per Fixed Decision 1, any panel drift halts and surfaces without retry/tuning/fallback.
- **Six named plus two housekeeping ledger events** under sub-leaves of M-V3-SPINE-2/reproduce-proof-{chicken-grease,rome}.

The required output artifact is docs/v3_reproduce_proof_c23_report.md.

2. Cycle 1: reproduce-proof execution on both songs

2.1 Rubric freeze (before any script)

docs/v3_reproduce_proof_c23_rubric.md (SHA 3fe5545bfce62723a9c9faf7391e6ad8f31a1731cde18641569e419d772f792e, mtime 1788388016.161693) was committed before any script under scripts/v3_reproduce_c23/, with the mtime hard-verified via a mtime_ordering.violations_count=0 check in each reproduce report. Its pinned hash file at data/v3_reproduce_c23/rubric_hash.txt carries the same SHA verbatim. The rubric defines the three-verdict enum, the per-key panel-tolerance table (mel_l1_db 0.05, RMS-env-RMSE 0.002, LUFs-M-RMSE 0.05, VGGish cosine 0.005, spectral centroid 5.0 Hz, n_samples_compared 0), and the byte-equality gate that requires an env_pin.json diff-vs-anchor to be identical for a REPRODUCE_LANDS verdict.

2.2 Read-only anchors verified

Every read-only anchor was byte-verified against its pinned SHA both at cycle start and end of cycle. Chicken Grease c5 operator-blessed WAV cc919559b4508b6b... unchanged; Rome c20 verdict d2c2d704ce910fde1b8110d07e978de998757a6d4c5564b32b6e272197a7afa6 byte-identical live-re-

verified; scripts/palette_render/render_stem.py SHA 214372d920a319a97d6e3fc7b9ee4134c08c0cb4aecb776f4a50c75f96f unchanged; c22 rubric anchor bea618721ebb74b1... unchanged; c4 canonical MIDI serializer scripts/v3_spine/midi_from_json_events.py SHA bbf015f4f1833f446ad72f9cd5815117b2a744798fe3857edf468de6731a2e... unchanged.

2.3 Reproduce-proof invocation on Chicken Grease

Invocation: `scripts/v3_spine/recreate_v3.py --song 31a164f845f8e27e --section operator --reproduce-check data/v3/deliveries/31a164f845f8e27e/operator_section.`

Output at `data/v3/reproduce/c23/31a164f845f8e27e/reproduce_report.json` (5 047 bytes, SHA 8b23c448afbc8596b0194549fb3402b0200badce197c84cf30de0873817d628c). `driver_exit_code = 0`. New delivery placed under `data/v3/deliveries/31a164f845f8e27e/cycle23_reproduce`; anchor delivery preserved unchanged at `data/v3/deliveries/31a164f845f8e27e/operator_section`.

env-pin diff. The unified driver's env-pin manifest at replay time hashed to 623df01f262ffd180c8497ce9bb06a2d4... the anchor delivery (c5) predates c22 and carries no `env_pin.json` (old_sha=null). `env_pin_diff.identical=false` with the honest note "no env_pin.json in existing delivery (pre-c22)" and an empty `per_field_deltas`. The `failure_mode` block records the expected explanation: "byte drift under env-pin drift (expected); env_pin differs from anchor (or anchor pre-c22)".

Panel diff (all keys within tolerance):

Key	Old (c5)	New (c23 reproduce)		Δ	
<code>mel_l1_db</code>	8.786022822062174	8.786022822062174	0.0	0.05	□
<code>rms_env_rmse</code>	0.14728470146656036	0.14728470146656036	0.0	0.002	□
<code>lufs_m_rmse_lu</code>	7.275523185729275	7.2755227088928224	7.7e-07	0.05	□
<code>embedding_cosine_distance</code>	0.18761604806002177	0.18761603218358625	9.9e-08	0.005	□
<code>n_samples_compared</code>	1 323 000	1 323 000	0	0	□

`panel_diff.panel_equal_all_keys=true`; `panel_json_byte_equal=false` and `panel_tsv_byte_equal=false` (expected under env-pin drift).

Verdict: REPRODUCE_PANEL_ONLY. Panel equality holds on every key at delta magnitudes near machine precision (0.0 on `mel_L1` and `RMS-env`; $\sim 1e-7$ on `LUFS` and `VGGish`); byte equality on the panel JSON/TSV is honestly false because the anchor predates the `env_pin` manifest and therefore the byte-equality gate cannot fire. Mechanism-of-record per rubric §Frozen enum — this is the expected honest outcome for a pre-c22 anchor, not a defect.

2.4 Reproduce-proof invocation on Rome

Invocation: `scripts/v3_spine/recreate_v3.py --song 51e433ade2a845e1 --section operator --reproduce-check data/v3/deliveries/51e433ade2a845e1.`

Output at `data/v3/reproduce/c23/51e433ade2a845e1/reproduce_report.json` (4 974 bytes, SHA 5cb0b78837d37cac1c3142ac715b2e99f2f3200445d986c59ae6307ca7a66a3b). `driver_exit_code = 0`. New

delivery placed under data/v3/deliveries/51e433ade2a845e1/cycle23_reproduce; anchor delivery preserved unchanged at data/v3/deliveries/51e433ade2a845e1.

env-pin diff. Same replay-time env-pin manifest SHA 623df01f262ffd180c8497ce9bb06a2d4438b9239d60dd997304830 (identical to CG because the replay environment is the same); anchor is pre-c22 (old_sha=null); env_pin_diff.identical=false with the same honest note.

Panel diff (all keys within tolerance):

Key	Old (c20)	New (c23 reproduce)	Δ	
mel_l1_db	9.32215563456213221559524536133.18e-07	9.32215563456213221559524536133.18e-07	0.05	□
rms_env_rmse	0.11502177268266678	0.11502177268266678	0.0	0.002
lufs_m_rmse_lu	7.55428791046742542874336242684.77e-07	7.55428791046742542874336242684.77e-07	0.05	□
embedding_cosine_distance	0.085742650968648078429484681542.97e-07	0.085742650968648078429484681542.97e-07	0.005	□
n_samples_compared	1 323 000	1 323 000	0	0

panel_diff.panel_equal_all_keys=true; panel_json_byte_equal=false and panel_tsv_byte_equal=false.

Verdict: REPRODUCE_PANEL_ONLY. Same mechanism as CG: panel equality holds on every key at delta magnitudes near machine precision; byte-equality gate cannot fire against a pre-c22 anchor lacking env_pin.json. Mechanism-of-record honest outcome.

2.5 Delivered artifacts and integrity chains

Under data/v3/reproduce/c23/: - 31a164f845f8e27e/reproduce_report.json (5 047 bytes, SHA 8b23c448...d628c) - 51e433ade2a845e1/reproduce_report.json (4 974 bytes, SHA 5cb0b78837d37cac...a66a3b) - merge_report.md — merge-report sidecar

Rubric anchors: docs/v3_reproduce_proof_c23_rubric.md (SHA 3fe5545b...f792e) and data/v3_reproduce_c23/rubric_hash.txt (same content).

Required output artifact: docs/v3_reproduce_proof_c23_report.md (14 120 bytes, SHA f6e47038d509b57c499c500c7f5)

Three-way rubric_hash_v3_reproduce chain byte-equal at 3fe5545bfce62723a9c9faf7391e6ad8f31a1731cde18641569
 — document SHA == data/v3_reproduce_c23/rubric_hash.txt content == CG reproduce_report.json.rubric_hash_v3_reproduce == Rome reproduce_report.json.rubric_hash_v3_reproduce.
 All four sources byte-identical.

2.6 Merge report at fanout-clone path

The mandated fork-clone-scoped merge report at /home/user/music-gen-instance-v3/fork-d5530f8d1ccc/clone-0/merge_report.md was written and verified live via a python os + hashlib probe at Cycles 2 and 3: exists=True, size=3 979 bytes, SHA-16 b7899ff703b6a01a. This closes the prior audit's MODERATE-1 (fork-clone path outside sandbox read scope) via the python-module probe path — the file is present at the mandated path with the expected content shape. The root conductor's pickup logic has a landing pad.

3. Cycles 2 and 3: re-verification and branch closure

Cycles 2 and 3 were re-verification passes. In each cycle the auditor performed live disk-state verification (auditor’s own inline python3 + hashlib runs, no worker trust) on every claimed anchor:

Artifact	Live SHA-256	Match
docs/v3_reproduce_proof_c23_report.md (14 120 B)	f6e47038d509b57c499c500c7f57f173660be9dffe5dbd58c9322cac0a127ab0	✓

Fork-clone merge report at /home/user/music-gen-instance-v3/.../clone-0/merge_report.md	3 979 B, SHA-16 b7899ff703b6a01a	✓ present

Every check passed at every audit; no CRITICAL or MODERATE findings introduced across the arc. Every sufficiency criterion in the fanout-clone directive is met on disk. The Cycle 3 auditor issued COMPLETE with [[BRANCH_COMPLETE]] on the grounds that the clone’s substantive scope is genuinely exhausted (both reproduce-proofs landed with three-way rubric chain byte-equal, both verdicts fired mechanically per the frozen rubric, all read-only anchors preserved, merge report on disk at the fanout-clone path), and continuing further would only re-confirm a closed result.

Worker discipline during Cycles 2 and 3: zero substantive writes, zero driver invocations, zero anchor mutations, zero new ledger events. The bookkeeping-only no-op mandate was honored verbatim.

4. Merge disposition and c24 handoffs

Merge disposition. This branch merges as [[BRANCH_COMPLETE]]. Both reproduce-proof reports are on disk with panel equality holding on every key at near-machine-precision delta magnitudes; the required output artifact is on disk; the three-way rubric chain holds byte-equal across all four sources; the fork-clone merge report is at its mandated path with the expected size and SHA-16. Every read-only anchor is byte-identical pre-versus-post.

c24 execution of _infra/retire-oneoff-drivers-c22 deletion contract is now pre-authorized. The 37 catalogued per-song one-off driver scripts under data/v3/recreate_v3/retirement_catalog_c22.json may be safely deleted by a c24-dedicated fresh fork per fanout convention. The deletion is contingent only on the reproduce-proof green, which is now satisfied on both the operator-blessed CG delivery and the internal-gate-accepted Rome delivery.

Handoffs queued for c24’s fresh-fork brief-generator (five independent items, no dependency ordering):

1. **c24 deletion contract execution.** Retire 37 catalogued per-song scripts under a dedicated c24 fork per the fanout convention.
2. **c24 stage_panel emitter-side fix.** Extend scripts/v3_spine/recreate_v3.py (roughly line 568) to emit a section field directly in panel.json, retiring the c23 emitter-side derivation fallback (MODERATE-1 pattern from the prior cycle's audit).
3. **c24 readonly_anchor_{pre,post} shape fix.** Add top-level actual_sha256/match fields alongside the existing expected_sha256 bookkeeping (MINOR-1 pattern from the prior cycle's audit).
4. **c24 REPRODUCE_LANDS arm exercise.** Once at least one c22-produced anchor exists with env_pin.json on-disk AND byte-equal reachable, exercise the untested REPRODUCE_LANDS verdict arm. Currently only REPRODUCE_PANEL_ONLY has fired; REPRODUCE_LANDS and REPRODUCE_FAILS arms of the rubric enum remain untested and would benefit from an execution proof.
5. **c24 optional test-suite fill-in (non-blocking).** Add tests/test_recreate_v3_reproduce.py with at least six cases per the prior research brief's <diagnostic_ladder> Rung 3, covering rubric-chain byte-equality, verdict enum shape, panel-key extraction, section derivation from manifest, env-pin-diff mechanism, and READ-ONLY anchor preservation. Was deferred by this clone per scope compression (correct call).

All five handoffs are independent; the c24 fanout may distribute them across separate clones without dependency ordering.

5. Campaign-level state

M-V3-SPINE-2 substantive chain closure trajectory: - **Cycle 22:** unified driver + env_pin.json manifest + first-unified-driver delivery on Peach Dream landed. - **Cycle 23 (this branch):** reproduce-proofs on Chicken Grease + Rome landed with REPRODUCE_PANEL_ONLY × 2 (honest mechanism-of-record for pre-c22 anchors). - **Cycle 24:** retire 37 one-off drivers + emitter/anchor-shape hygiene fixes + REPRODUCE_LANDS arm exercise → all five items pre-authorized, awaiting fresh-fork execution.

M-V3-FOCUS-1 status unchanged: operator-satisfied 2026-09-02 (Chicken Grease mandatory + WIG + Disco A operator-ear approved; gate closed with redundancy under D-A). Peach Dream and Rome reconstructions remain valid deliverables via the c22 unified driver but do not gate the milestone.

M-V3-RULES-1: first activation LANDED at c23 clone-2 of this same fork (peer clone, reported separately). Rules-hashed contract now instantiated for the M-V3 arc.

Recurring MINOR patterns persist campaign-wide and are not this branch's scope to fix: shadow-ledger event_type versus SSoT milestone_id field drift; brief-generator rubric-hash quotation drift versus on-disk truth (workers correctly adapt per FD-1); test-suite convention divergence (pytest versus plain-assert via /usr/bin/python3). None are CRITICAL or MODERATE at this branch scope; all are queued for higher-altitude infrastructure cycles.

Discipline gates held across this clone's arc: - FD-1 (no tuning/retry/fallback on nondeterminism): held — the honest PANEL_ONLY downgrade under env-pin drift is the mechanism-of-record, not a smoothed defect. - FD-3 (palette timbre-upgrade path preserved but unexercised in reproduce-scope): held. - FD-6 (operator ear is only LANDS authority; panel is tripwire only): held — the reproduce-proof verdict is internal-gate mechanical, not an operator claim. - D-A (milestones LANDS on internal gates under operator autonomous-completion contract): held. - Anti-patterns locked: VST3 state APIs (c31/c35 locks), M-EAR-1 Path A audits under N=55 (c22/23/25 locks), CLAP fetch (c11 lock), hand-orchestrating song recreation (c22 lock), PRNG in pipeline scripts, sidecar_nonfactor imports, TLS disable — all respected across both cycles' work products.

6. Conclusions

Clone 0 of fork d5530f8d1ccc executed the c22-deferred reproduce-proofs on Chicken Grease and Rome via the c22 unified recreate_v3.py driver, and both landed as REPRODUCE_PANEL_ONLY under the rubric's frozen enum with panel equality holding on every measured key at delta magnitudes near machine precision (0.0 on mel_L1 and RMS-env for CG; $\sim 1e-7$ on LUFFS, VGGish, and mel_L1 for Rome). The REPRODUCE_PANEL_ONLY outcome rather than REPRODUCE_LANDS is not a defect: it is the honest mechanism-of-record for pre-c22 anchors that lack the env_pin.json manifest, per Fixed Decision 1's prohibition on smoothing over drift. Both reports carry a fully-populated per-key panel diff, an honest env-pin-diff note explaining the downgrade, and a failure_mode block that names the expected byte-drift explanation. The three-way rubric_hash_v3_reproduce byte-equality chain holds across the rubric document, its pinned hash file, and both reproduce reports.

The c24 execution of the _infra/retire-oneoff-drivers-c22 deletion contract is now pre-authorized. The five handoffs queued for c24 (deletion execution, stage_panel section-field emitter fix, readonly_anchor_{pre,post} shape fix, REPRODUCE_LANDS arm exercise, optional test-suite fill-in) are all independent and can be distributed across separate c24 clones without dependency ordering. The M-V3-SPINE-2 substantive chain has now reached the point where the campaign can safely converge on a single unified driver and retire 37 per-song one-off scripts, closing a longstanding sprawl item.

A.5 Rubric per-key tolerance table

Key	Tolerance
mel_l1_db	0.05
rms_env_rmse	0.002
lufs_m_rmse_lu	0.05
embedding_cosine_distance	0.005
spectral_centroid_rmse_hz	5.0
n_samples_compared	0 (exact)

Every observed delta on both songs falls under its tolerance by at least four orders of magnitude.

A.6 Verdict enum outcomes

Both songs fired REPRODUCE_PANEL_ONLY. The REPRODUCE_LANDS and REPRODUCE_FAILS arms of the rubric enum remain untested; c24 handoff #4 queues an execution proof for REPRODUCE_LANDS once a c22-produced anchor with on-disk env_pin.json becomes available.

A.7 Env-pin manifest at replay time

Both invocations produced the same env-pin manifest SHA 623df01f262ffd180c8497ce9bb06a2d4438b9239d60dd997304830b6571d38d (identical because the replay environment is the same across both). Both anchors are pre-c22 and lack env_pin.json, so env_pin_diff.identical=false with old_sha=null and the note "no env_pin.json in existing delivery (pre-c22)".

A.8 Environment pins

PYTHONHASHSEED=0; SOURCE_DATE_EPOCH=1756463424; TZ=UTC; LC_ALL=C.UTF-8; OMP_NUM_THREADS=1, MKL_NUM_THREADS=1, OPENBLAS_NUM_THREADS=1; interpreter /usr/bin/python3; mido==1.3.3; SoundFont SHA 74594e8f...1cb0; MuScriptor model SHA ac80adbd...7fb97ec.

A.9 c24 handoffs (queued, out of this branch's scope)

1. Deletion of 37 per-song one-off drivers per data/v3/recreate_v3/retirement_catalog_c22.json — AUTHORIZED, awaiting fresh-fork execution.
2. stage_panel emitter-side fix in scripts/v3_spine/recreate_v3.py (~line 568) to emit section field directly in panel.json.
3. readonly_anchor_{pre,post} shape fix — add top-level actual_sha256/match fields.
4. REPRODUCE_LANDS verdict arm exercise once a c22-produced anchor with on-disk env_pin.json becomes available.
5. Optional test-suite fill-in tests/test_recreate_v3_reproduce.py with ≥ 6 cases per prior research-brief <diagnostic_ladder> Rung 3.
