Final Audit Report

Status Distribution

Planned milestone status distribution, counting only M1-M8 from `plan_of_record.md`:

Status	Count
validated	8
not-started	0
in-progress	0
action_required	0
deferred	0
reopened	0
superseded	0
invalidated	0

Auxiliary run/process ledger entries were not counted in the planned milestone distribution.

Plan Adherence

Milestone	Terminal status	Confidence	Evidence count	Latest evidence pointer
M1	validated	high	6	docs/data_feasibility_map.md; data/source_feasibility_matrix.csv; data/source_probe_results.json
M2	validated	high	1	docs/hypergraph_schema.md
M3	validated	high	9	data/synthetic_benchmark/v0.1/; docs/synthetic_benchmark_design.md
M4	validated	high	3	tools/hierarchy_metrics.py; tests/test_hierarchy_metrics.py; tests/test_synthetic_benchmark.py
M5	validated	high	60	data/public_taxonomy_sample/v0.1/; docs/public_taxonomy_sample_design.md; frozen WFO/GBIF/Open Tree raw JSON caches
M6	validated	high	15	data/experiments/synthetic_v0.1/; docs/m6_experiment_report.md; tests/test_baselines.py
M7	validated	high	7	docs/formal_diagnostic.md; data/formal_diagnostic/; tests/test_formal_diagnostic.py

Milestone	Terminal status	Confidence	Evidence count	Latest evidence pointer
M8	validated	high	4	final_report.md; artifact_ index.md; research_ contribution_ ledger.md; audit_report.md

All planned milestones reached terminal `validated` status with high confidence. Evidence checks found the expected milestone artifacts on disk and supporting the scoped claims recorded in the ledger and final documents.

Confidence Calibration

Terminal status / confidence	Count
validated / high	8
validated / medium	0
validated / low	0
validated / provisional	0

Low-confidence terminal states: none.

The final documents preserve the narrow claim shape supported by the evidence: synthetic benchmark, hierarchy-aware metrics, small public-data-backed taxonomy/name sample, base-line/ablation results, and a formal clique-expansion diagnostic. They do not claim new plant taxonomy, undocumented species relationships, hybrid origins, broad biological novelty, or broad predictive superiority.

Residual Debt

No residual debt remains for planned milestones M1-M8.

The recurrent validator warnings observed during testing were process-scope warnings, not planned milestone defects: noncanonical raw-directory artifact path warnings for the public sample and manager-assessment artifact warnings outside the planned deliverables. Root-level final deliverable placement warnings were also nonblocking because M8 required those root files by name.

Findings By Severity

Severity	Count
CRITICAL	0
MODERATE	0
MINOR	0

No structured findings were appended during final audit verification or testing.

Future Work

No future-work proposals are anchored to residual debt because no planned milestone residual debt remains.

Reconciliation Log

No `_plan/`, `_archive/`, or correction reconciliation events are emitted by this final audit.
