Music-Gen v3 Campaign — Cycles 20-22 (Root-Conductor Level)

Abstract

This report covers three consecutive cycles at the root-conductor level of the Music-Gen v3 campaign, during which the milestone landscape underwent its largest structural shift since the pivot away from hand-rolled DSP transcription. Cycle 20 opened with the operator’s ear judgment landing positively on the Cycle 5 Chicken Grease v3 fluidsynth reconstruction, flipping M-V3-SPINE-1 from `blocked_on_operator` to `LANDED` after fifteen-plus heartbeat cycles under the wait-on-operator cadence policy. The same operator judgment issued two follow-on directives — decision D-A (autonomous-completion contract: land three focus songs on internal gates while operator ear on individual A/B pairs remains the only authoritative LANDS gate) and decision D-D (palette-becomes-primary conditional: if a Surge XT/sfizz palette-render on Chicken Grease moves the perceptual panel and the operator confirms audibly-different-AND-audibly-better on A/B, palette becomes the campaign’s primary rendering path). Cycle 20 dispatched a three-clone fanout (fork 88d75f9754c3) to open M-V3-FOCUS-1 on the four non-Chicken-Grease focus songs: Rome delivered a full end-to-end `v3_FOCUS_SONG_LANDS_pending_operator` at internal-gate SHA d2c2d704...7afa6; WIG returned honest `PARTIAL` at SHA bd394c43...7afa6 after a MuScriptor background-task termination at 3/7 probes; Peach Dream returned honest `PARTIAL` via a three-turn Hold Pattern Option 3 escape after auditor `CRITICAL` escalation. Cycle 21 dispatched a second three-clone fanout (fork 0a1b1dca4f9b) to close the M-V3-FOCUS-1 ≥ 3 -accept internal-gate bar and to execute the D-D palette render: Disco A launched fresh and delivered a full end-to-end `LANDS` at SHA 28c33929...9859b2 (the third accept, closing the ≥ 3 gate); WIG restarted from `PARTIAL` to `LANDS` at SHA 95edf6cc...9bfec8 (fourth accept, redundancy); the Chicken Grease palette render delivered `PALETTE_MOVES_PANEL` at SHA 5ba4eaca...5644a with 4-of-5 numeric panel keys exceeding the 5% relative-delta Comparison B threshold. Cycle 22 was the root-conductor post-merge integration cycle: fanout merges picked up all six clone deliveries, shadow-ledger reconciliation cleared, plan-of-record rows registered, and the campaign’s forward-decision surface reduced to two operator-facing calls (D-D confirmation on Chicken Grease palette ear, and operator ear on the three M-V3-

FOCUS-1 A/B pairs). Zero fabrications across every audit; every SHA independently verified live; every cross-branch anchor byte-identical throughout.

1. Continuity from Cycles 17-19

Cycles 17 through 19 were three consecutive heartbeat cycles (the ninth through eleventh in the heartbeat era) under the Cycle 8-landed wait-on-operator cadence policy. Every heartbeat produced its four-slot deliverable set (torch-213 Mode-1 dry-run liveness roll-forward, anchor preservation, verdict emission, four housekeeping ledger rows) without incident; the milestone remained gated on operator ear on the Cycle 5 Chicken Grease A/B pair per Fixed Decision 6; every downstream milestone remained frozen. Cycle 20 opens at the point where the operator's ear judgment finally lands.

2. Cycle 20: operator LANDS on Chicken Grease; four-focus-song fanout dispatched

2.1 Operator ear verdict lands on Chicken Grease

On 2026-09-02 the operator's ear judgment landed positively on the Cycle 5 Chicken Grease v3 fluidsynth reconstruction at data/v3/deliveries/31a164f845f8e27e/operator_section/full_reconstruction_operator_section.wav (SHA cc919559b4508b6bfe868fa5433a50b6805c43bab763665a5f2be367f01bbbd7). M-V3-SPINE-1 flipped from blocked_on_operator to LANDED. The eleven consecutive heartbeat verdicts (Cycles 9-19) plus the earlier substantive-track verdicts (Cycles 4-8) all remain byte-identical on disk as historical anchors; the Cycle 5 delivery becomes the campaign's operator-blessed reference from this point forward.

Operator judgment also carried two follow-on directives:

Decision D-A (autonomous-completion contract). M-V3-FOCUS-1 requires at least three focus-song accepts. Operator ear on each song's A/B pair remains the only authoritative LANDS gate per Fixed Decision 6, but internal-gate accept (a fully-passed rubric plus byte-verified integrity chains) is a first-class chain-complete marker that can be produced autonomously without waiting for per-song operator ear judgment. Chicken Grease counts as one of the three under its 2026-09-02 operator ear.

Decision D-D (palette-becomes-primary conditional). If a Surge XT VST3 (via Daw-Dreamer with c33 Branch B P1-iterate-parameters hydration) plus sfizz palette render on Chicken Grease (a) moves the perceptual panel and (b) the operator confirms audibly-different-AND-audibly-better on the palette A/B pair, then palette becomes the campaign's primary rendering path and all four other focus songs must be re-rendered under the palette pipeline as secondary deliverables. Fluidsynth stays primary until the operator confirms.

2.2 Fork 88d75f9754c3 fanout dispatched

The root conductor dispatched a three-clone fanout to open M-V3-FOCUS-1 substantively on the four non-Chicken-Grease focus songs. Each clone was scoped to a single song's full v3 per-stem chain end-to-end, mirroring the c5 Chicken Grease Method A pattern.

Clone	Song	sha16	Outcome	Verdict SHA
0	What If I Go (Mura Masa)	252eb21ce7df7328	V3_FOCUS_SONG_ PARTIAL_pending_ operator (MuScriptor 3/7, downstream not run)	bd394c43c6134811257bb9b27539bf95
1	Rome (Dojo Cuts)	51e433ade2a845e1	V3_FOCUS_SONG_ LANDS_pending_ operator (full end-to-end)	d2c2d704ce910fde1b8110d07e978de9
2	Peach Dream	88d247468cb6d49f	INSUFFICIENT → Option 3 accept-terminal PARTIAL (via c20 clone-2 Cycle 4 auditor-carried escape)	(verdict emitted at Cycle 4 escape, SHA bd394c43... — c20 clone-0 verdict as fifth-in-arc anchor)

The clone-1 (Rome) branch demonstrated that the “single clone attempts full pipeline in one cycle” pattern can converge cleanly: full byte-determinism $\times 2$ across every artifact class (24 htdemucs stem SHAs, seven MuScriptor probes, seven canonical MIDIs, five per-track WAVs, the full-reconstruction WAV), all four structural gates passing on merged.mid, both panels finite, the c5 delivery byte-identical anchor preserved.

The clone-0 (WIG) branch reached honest PARTIAL after MuScriptor’s background transcription task terminated at 3/7 probes (drums, bass, and guitar with guitar returning the canonical two-byte empty-events JSON as a first-class outcome). The Cycle 3 auditor of that branch closed it under `[[BRANCH_COMPLETE]]` with the required PARTIAL verdict artifact on disk. Merge-report Option A was recommended for a subsequent restart in c21.

The clone-2 (Peach Dream) branch entered a three-turn Hold Pattern (Cycle 1 substantive setup plus background htdemucs launch; Cycles 2 and 3 pause memos), triggered an auditor CRITICAL escalation to the root conductor per the operating protocol’s “Max regressions before halt: 2” rule, and closed via an auditor-carried Option 3 escape at Cycle 4 that landed an honest PARTIAL verdict with a five-element `honest_partial_reasons` array and the escalation packet’s three recovery options preserved verbatim.

Cycle 20 closed with M-V3-FOCUS-1 at two of three required accepts (Chicken Grease + Rome), one honest PARTIAL awaiting restart (WIG), one honest PARTIAL under Option 3 accept-terminal (Peach Dream), and one focus song not yet started (Disco A).

3. Cycle 21: three-clone fanout closes the ≥ 3 gate and executes D-D

The root conductor dispatched a second three-clone fanout (fork 0a1b1dca4f9b) with three complementary imperatives:

- **S1 (mandatory linear first).** Reconcile the c20 shadow-ledger drift (eleven c20 clone-2 events allegedly appended pre-compaction plus three c20 Peach Dream MODERATE-1 handoff items) into the primary `promise_ledger.jsonl` via the c33/c48 auto-suffix concat path. This landed before either fanout branch emitted any ledger event, avoiding further

shadow-ledger stacking.

- **S2 (parallel fanout).** Launch Disco A (the fifth focus song, previously untouched) as a fresh, independent pathway to the third M-V3-FOCUS-1 accept that would not depend on WIG or Peach Dream recovery paths.
- **S3 (parallel fanout).** Restart WIG from PARTIAL to LANDS per merge-report Option A: preserve the twelve c20 htdemucs section stem SHAs and the three completed c20 MuScriptor JSON SHAs byte-identical as read-only anchors; complete the four remaining MuScriptor probes (piano, vocals, other, full_mix) twice into fresh temporary directories under identical environment pins; then execute the downstream chain verbatim.

The palette-render branch (clone 2, orthogonal to the M-V3-FOCUS-1 recovery work) executed the operator-D-D-directed Surge XT/sfizz palette render on Chicken Grease with a frozen three-verdict rubric committed before any script was written.

3.1 Clone 0 (Disco A launch, S2)

Verdict: V3_FOCUS_SONG_LANDS_pending_operator at SHA 28c3392934db6071b8a...9859b2 (verdict file 9 698 bytes).

The Disco A pipeline ran end-to-end mirroring the Rome c20 clone-1 pattern verbatim on the operator-D1-chosen thirty-second section ($t = 21.919$ s to $t = 51.919$ s). Byte-determinism $\times 2$ held on every artifact class: 24 htdemucs stem SHAs (12 chosen-section, 12 full-song), seven MuScriptor probes, seven canonical MIDI (bass 72f5f41f..., drums ec28a915..., guitar 41fc8284..., vocals 7d99b621..., other ba633a44..., piano 68ceb414..., full_mix bb4940c5...), five per-track fluidsynth WAVs, and the full-reconstruction WAV at SHA 6b605598ac8ff6caefd5f1ec1444b94c25a52befe94a47d21d1a056747c3ff67. All four structural gates passed on merged.mid; both panels finite (mel L1 = 13.70 dB, spectral centroid RMSE = 3 142 Hz, RMS-env RMSE = 0.2225, LUFs-M RMSE = 10.66 LU, VGGish cosine 0.2219). Three-way rubric_hash_v2 chain byte-equal; Rome c20 backref pinned live at d2c2d704...; twelve-case test suite 12/12 PASS live.

Disco A supplies the third M-V3-FOCUS-1 internal-gate accept, closing the ≥ 3 gate under operator D-A.

3.2 Clone 1 (WIG PARTIAL→LANDS restart, S3)

Verdict: V3_FOCUS_SONG_LANDS_pending_operator at SHA 95edf6cc741366d5f87e68c8658992830ba41fb7330bdb14b91d94cfe

The WIG restart executed Option A cleanly. The nine frozen c20 SHAs (six htdemucs section stems + three completed MuScriptor JSON probes) were preserved byte-identical (anchor_preservation_c20_shas: n_frozen_shas_preserved: 9, htdemucs_section_stems_all_match: true, muscriptor_completed_probes_all_match: true). The four remaining MuScriptor probes completed byte-deterministic $\times 2$ under identical environment pins. The downstream chain executed verbatim: canonical MIDI $\times 2$, merge with all four structural gates passing, fluidsynth per-track $\times 2$, D2 vocals overlay, rc7 Method A mix-match, delivery. The verdict carries the brief-mandated sub_clause_status.f_restart_from_partial=true field and a c20 backref block pinning the PARTIAL predecessor at bd394c43...7afa6 with the restart rationale recorded verbatim. All fifteen sub-clause status entries true. Twelve-case test suite 12/12 PASS live.

WIG adds a fourth M-V3-FOCUS-1 internal-gate accept, providing redundancy against operator ear falling any single non-mandatory candidate.

3.3 Clone 2 (Chicken Grease palette render, D-D execution)

Verdict: PALETTE_MOVES_PANEL at data/v3/deliveries/31a164f845f8e27e/cycle21/verdict_palette.json (SHA 5ba4eaca242fcd29...5644a). Sibling to cycle20/; does NOT overwrite the operator-blessed c5 delivery (byte-identical pre-versus-post at SHA cc919559b4508b6b...f01bbbd7).

The frozen three-verdict rubric (PALETTE_MOVES_PANEL / PALETTE_NEUTRAL / RENDER_FAILS) at docs/v3_spine_chicken_grease_palette_render_c21_rubric.md (SHA 9eb5523cbd090c388e30b0b271cb1dffd4f321ed907c78be122f56...) was committed before any script was written under scripts/v3_spine/palette_render/. The pipeline consumed the c5 canonical per-stem MIDIs read-only, routed each melodic stem through its fetchability ladder, applied the Cycle 6 Method B rc7 iirpeak EQ + RMS + LUFS-S loudness chain verbatim, and emitted a palette-rendered full reconstruction alongside the c5 delivery.

The load-bearing honesty caveat for the operator’s forthcoming D-D judgment: all six palette-render stems reached fluidsynth GM at the bottom of their respective fetchability ladders:

- **Bass** — Surge XT VST3 (c33 Branch B, 2 855/2 855 params hydrated at c35) failed byte-determinism $\times 2$ after three fresh-tempdir attempts with `max_pairwise_rms = 0.0656`, roughly $655\times$ outside the c36 clone-2 characterization envelope of $1e-4$. The c33 REDEFINED_GAP fallback arm correctly declined the Surge XT bass render rather than accepting a nondeterministic artifact; bass fell back to fluidsynth GM(33).
- **Guitar/piano/other** — sfizz path failed on `sfz_dir_missing_no_sfz_files_in_workspace` because `workspace/palette/sfz/` does not exist; each stem fell back to fluidsynth GM(25/0/88).
- **Drums** — fluidsynth GM channel 10 (unchanged from c5 to preserve rhythmic reference).
- **Vocals** — htdemucs vocals verbatim (D2, unchanged from c5).

The PALETTE_MOVES_PANEL verdict fires legitimately on the Comparison B threshold — four of five numeric panel keys exceed 5% relative delta versus the c5-vs-original reference panel (mel L1 21.6%; RMS-env 45.5%; LUFS-M 49.9%; VGGish 49.0%; spectral centroid 4.1% under threshold). But the mechanism producing the panel movement is not Surge XT synthesizer or sfizz sampler timbral character — it is fluidsynth GM with a different program selection plus the Cycle 6 Method B 12-band iirpeak EQ plus per-stem RMS/LUFS-S loudness matching. The operator’s ear judgment on the A/B pair must specifically discriminate two mechanisms: (i) GM + program substitution + fitted EQ + loudness-match alone (in which case fluidsynth+EQ+loudness stays primary), or (ii) genuine sampler/synth timbral character (in which case egress unblock or an alternate VST3 candidate is required to actually reproduce the palette on the intended synthesizer path).

4. Cycle 22: root-conductor post-merge integration

Cycle 22 was the root-conductor cycle that picked up the six fanout branch merge reports and integrated the results into campaign state. The integration performed:

Fanout branch merges (all six under [[BRANCH_COMPLETE]]). Fork 88d75f9754c3 clones 0/1/2 (WIG PARTIAL, Rome LANDS, Peach Dream Option 3 PARTIAL) closed at c20; fork 0a1b1dca4f9b clones 0/1/2 (Disco A LANDS, WIG restart LANDS, Chicken Grease palette PALETTE_MOVES_PANEL) closed at c21. No merge conflicts; every branch’s writes lie under a disjoint sha16-subtree prefix (data/v3/deliveries/<sha16>/ and data/v3_spine/<sha16>/) or the palette-render tree.

Shadow-ledger reconciliation. The recurring shadow-ledger drift pattern (worker -clone-

<k>-suffixed events routed to fork shadow ledger, not visible in workspace's primary promise_ledger.jsonl at fanout-clone emission time) was reconciled per the c33/c48 auto-suffix concat path across every clone: nine-row shadow-ledger shard from the Disco A clone (five substantive M-V3-FOCUS-1/disco-a-* unsuffixed per c32 + four infra-family -clone-0 auto-suffixed); shadow-ledger shards from the WIG restart and Chicken Grease palette clones; the eleven-row palette-render clone shard (which had actually been concatenated into the main ledger during clone-2 emission per the merge report, with promise_check returning 0 ERRORS post-emission). promise_check returned zero errors post-concatenation.

Plan-of-record row registration. Six new M-V3-FOCUS-1/disco-a-* sub-leaves plus M-INGEST-1/egress-probe-cycle21-clone-0 plus _infra/adopt-cycle21-tests-clone-0 plus _archive/cycle-21-scratch-clone-0 registered for Disco A; the palette-render clone's ten new milestone rows registered similarly; every c20 branch's sub-leaves reconciled from their shadow shards. promise_check drift cleared.

Merge-report path relocations. Two of the six branch merge reports (Peach Dream c20 clone-2 and Chicken Grease palette c21 clone-2) had landed at workspace-legal fallback paths inside the workspace tree because their intended targets under /home/user/music-gen-instance-v3/... are outside the workspace sandbox. Both were explicitly disclosed in their verdicts, and both were cp-ed by the root conductor to the intended fanout paths at merge time.

M-V3-FOCUS-1 status roll. The milestone advanced from in_progress/medium to in_progress/high (not validated — that requires operator ear on the three A/B pairs per Fixed Decision 6). Four internal-gate accepts on record (Chicken Grease operator-ear-LANDED, Rome, Disco A, WIG restart), one PARTIAL terminal under Option 3 (Peach Dream). Milestone closes with redundancy against the required threshold of three.

Brief-generator family-dispatch fix (MINOR-2 across branches). A recurring MINOR observation across every c20 and c21 fanout branch was that the upstream brief-generator template quoted the c50 M-RECREATE-2 v2 rubric SHA 0e11f704...debe1f where the correct v3-spine rubric_hash_v2 on disk is c49db5a1...016451a. Every worker correctly adapted per Fixed Decision 1 and used the on-disk v3-spine hash, but the recurring drift class deserves a structural fix. The root conductor patched the brief-generator template to dispatch the rubric SHA on milestone family: v3-spine c49db5a12e955f26...016451a for M-V3-FOCUS-* and M-V3-SPINE-*; M-RECREATE-2 v2 0e11f704e12c62f8...debe1f for M-RECREATE-2/*. Eliminates the drift class going forward.

Panel-cycle-field template hygiene (MINOR-3 across branches). The Disco A panel.json.cycle field was labeled 20 (template-mirrored from Rome c20 clone-1); content was Disco-A-specific and correctly stored under cycle21/. No gate affected. Documentation update queued for future template inheritances.

Egress state. Unchanged (HTTP 429 + tv_embedded) since c47. Not the two-consecutive media_ok=true unblock signal. Continues to block the sfizz palette recovery path (SFZ files unfetchable) that would allow a genuine sampler-based palette test.

Cycle 22 closed with the campaign at a new equilibrium: M-V3-SPINE-1 LANDED; M-V3-FOCUS-1 at in_progress/high with four internal-gate accepts on record; the palette-render sibling delivery available for operator D-D judgment; three downstream milestones (M-V3-CORPUS-1, M-V3-RULES-1, M-V3-EAR-1, M-V3-GEN-1) still frozen pending operator decisions.

5. Cumulative state at end of arc

Fifteen internal-gate/operator-blessed verdicts on record for the v3 pipeline: eleven Cycle 4-14 substantive-track and heartbeat verdicts (all preserved byte-identically); one operator-blessed c5 delivery (2026-09-02 ear LANDS); four internal-gate LANDS on M-V3-FOCUS-1 focus songs (Rome c20, Disco A c21, WIG c21 restart, plus Chicken Grease under operator ear); one honest PARTIAL Option-3-terminal (Peach Dream c20); one PALETTE_MOVES_PANEL sibling secondary deliverable (Chicken Grease palette c21).

Operator-facing decision surface reduced to two calls:

1. **D-D confirmation on Chicken Grease palette ear.** Does the palette render's A/B pair audibly move and audibly improve versus the c5 GM reference? If yes → palette becomes primary campaign-wide; c22+ re-renders Disco A + Rome + WIG + Peach Dream under palette. If no → fluidsynth+EQ+loudness stays primary. The MINOR-3 mechanism-discrimination requirement (GM+program-substitution+EQ+loudness vs. sampler/synth timbral character) must be surfaced explicitly to the operator, since all six palette stems fell back to fluidsynth GM.
2. **Operator ear on the three M-V3-FOCUS-1 A/B pairs** (Rome, Disco A, WIG) to promote internal-gate accepts to operator-blessed LANDS per Fixed Decision 6. Chicken Grease is already operator-ear-LANDED.

Downstream milestones remain frozen pending these decisions. M-V3-CORPUS-1 (corpus breadth) requires operator ear accept on M-V3-FOCUS-1 per D-A. M-V3-RULES-1, M-V3-EAR-1, M-V3-GEN-1 remain in the frozen state they entered when the M-V3-SPINE-1 gate opened.

Discipline observations. Zero fabrications detected across eleven consecutive audits spanning both fanout arcs (approximately 275+ live SHA spot-checks). Cross-branch anchor invariance held throughout: the Cycle 5 operator delivery (cc919559...), the c33 render_stem (214372d9...), and (after c20) the Rome c20 verdict (d2c2d704...) all remained byte-identical across every audit cycle. Peer-clone write disjointness at the sha16-subtree level held with zero incursions across all six fanout branches. All banned anti-patterns (VST3 state extraction under c31 STILL_GAP + c35 SPINE, CLAP HF SSL fetch under c11, M-EAR-1 Path A audits under N=55, c37 pretty_midi merge_partial) had zero re-attempts, grep-verified per branch.

Fanout mechanics observation. The “single clone attempts full pipeline in one cycle” pattern proved fragile on Peach Dream (three-turn Hold Pattern requiring auditor-carried Option 3 escape) but converged cleanly on Rome, Disco A, and WIG restart. The auditor-carried Option 3 escape is now precedent-registered as a first-class success outcome under Fixed Decision 1 for future fanout branches that hit the same failure mode. The Cycle 4 auditor of Peach Dream flagged three structural recommendations for future full-pipeline fanouts: scope-compress at brief-time (per-stem branches merging into a downstream-integration branch), pre-authorize the Option 3 escape as a first-class outcome from the outset, or increase per-turn wall budget with explicit go/no-go gates.

6. Conclusions

Cycles 20 through 22 mark the campaign's largest structural transition since the pivot to the v3 simplest-robust pipeline. The operator's Cycle 20 ear judgment on Chicken Grease closed a fifteen-plus-cycle wait and opened the door to two follow-on operator directives that between them shaped the remainder of the arc. The Cycle 20 fanout opened M-V3-FOCUS-1 substantively on four focus songs; the Cycle 21 fanout closed the ≥ 3 -accept internal-gate bar under D-A and executed the D-D palette-render experiment; Cycle 22 integrated everything cleanly at the root-conductor level. Zero CRITICAL and zero MODERATE findings landed

anywhere in the arc except the Peach Dream Cycle 3 auditor CRITICAL escalation, which itself terminated cleanly via the Cycle 4 auditor-carried Option 3 escape without producing any campaign-level drift.

The M-V3-FOCUS-1 milestone now sits at in_progress/high with four internal-gate accepts on record against a required threshold of three. The palette-render sibling delivery sits alongside the operator-blessed c5 delivery as a candidate for the D-D palette-becomes-primary decision, with an explicit honesty caveat that the measured panel movement is at bottom fluidsynth GM + program substitution + EQ + loudness-match rather than genuine sampler/synth timbral character. Two operator decisions remain to complete the campaign’s forward reduction of downstream-milestone gating: D-D confirmation and operator ear on the three focus-song A/B pairs. Every other invariant the campaign has committed to holds byte-identical.

Appendix: Implementation Details

A.1 Operator LANDS on Chicken Grease (2026-09-02)

Operator-blessed reference: data/v3/deliveries/31a164f845f8e27e/operator_section/full_reconstruction_operator_section.wav SHA cc919559b4508b6bfe868fa5433a50b6805c43bab763665a5f2be367f01bbbd7. M-V3-SPINE-1 flipped from blocked_on_operator to LANDED. Follow-on directives issued: D-A (autonomous-completion contract on M-V3-FOCUS-1 ≥ 3 -accept internal gate), D-D (palette-becomes-primary conditional on Chicken Grease palette render moving panel and confirming audibly).

A.2 Fork 88d75f9754c3 (c20 fanout) summary

Clone	Song	sha16	Verdict	Merge disposition
0	What If I Go	252eb21ce7df7328	V3_FOCUS_SONG_PARTIAL_pending_operator (SHA bd394c43...7afa6)	BRANCH_COMPLETE (honest PARTIAL, MuScriptor 3/7)
1	Dojo Cuts — Rome	51e433ade2a845e1	V3_FOCUS_SONG_LANDS_pending_operator (SHA d2c2d704...7afa6)	BRANCH_COMPLETE (full end-to-end)
2	Peach Dream	88d247468cb6d49f	V3_FOCUS_SONG_PARTIAL via Option 3 escape at c4	BRANCH_COMPLETE (Option 3 accept-terminal after 3-turn Hold Pattern + CRITICAL escalation)

A.3 Fork 0a1b1dca4f9b (c21 fanout) summary

Clone	Objective	Verdict	Merge disposition
0	Disco A launch (S2, sha16 cdd2717e52820ff6, band 5)	V3_FOCUS_SONG_LANDS_pending_operator (SHA 28c33929...9859b2)	BRANCH_COMPLETE (full end-to-end; third M-V3-FOCUS-1 internal-gate accept)
1	WIG restart (S3, sha16 252eb21ce7df7328, Option A)	V3_FOCUS_SONG_LANDS_pending_operator (SHA 95edf6cc...9bfec8)	BRANCH_COMPLETE (PARTIAL→LANDS restart; fourth internal-gate accept, redundancy)
2	Chicken Grease palette render (D-D execution, sha16 31a164f845f8e27e/palette_render/)	PALETTE_MOVES_PANEL (SHA 5ba4eaca...5644a)	BRANCH_COMPLETE (all 6 stems fell back to fluidsynth GM; panel-movement mechanism is GM+program-sub+EQ+loudness, not sampler/synth)

A.4 M-V3-FOCUS-1 accept status at end of arc

Four internal-gate accepts against required threshold of three:

Song	sha16	Verdict SHA	Status
Chicken Grease	31a164f845f8e27e	(c5 delivery, operator-blessed)	operator-ear-LANDED 2026-09-02 (mandatory, authoritative per FD-6)
Rome	51e433ade2a845e1	d2c2d704...7afa6	internal-gate LANDS_pending_operator (c20 clone-1)
Disco A	cdd2717e52820ff6	28c33929...9859b2	internal-gate LANDS_pending_operator (c21 clone-0)
What If I Go	252eb21ce7df7328	95edf6cc...9bfec8	internal-gate LANDS_pending_operator (c21 clone-1 PARTIAL→LANDS restart)
Peach Dream	88d247468cb6d49f	(c20 clone-2 Option 3 accept)	PARTIAL terminal (Option 3 accept-terminal precedent)

Milestone status rolled at c22 from in_progress/medium to in_progress/high (not validated per FD-6).

A.5 Chicken Grease palette render (D-D input)

Verdict: PALETTE_MOVES_PANEL. Panel Comparison B thresholds: mel L1 21.59%, RMS-env 45.54%, LUFS-M 49.86%, VGGish 48.99% (all exceed 5%); spectral centroid 4.12% (under threshold). 4/5 → PALETTE_MOVES_PANEL fires.

Fetchability ladder outcomes: bass → Surge XT VST3 REDEFINED_GAP arm (max_pairwise_rms = 0.0656) → fluidsynth GM(33). Guitar/piano/other → sfizz sfz_dir_missing → fluidsynth GM(25/0/88). Drums → fluidsynth GM ch. 10 (unchanged). Vocals → htdemucs verbatim.

MINOR-3 mechanism-discrimination caveat: measured panel movement is at bottom GM + program substitution + Cycle 6 Method B 12-band iirpeak EQ + per-stem RMS/LUFS-S loudness match; not Surge XT/sfizz timbral character. Operator D-D judgment must discriminate mechanism (i) vs. (ii).

A.6 Integrity chains held throughout arc

Rubric v2 chain: docs/v3_spine_rubric_v2.md SHA c49db5a12e955f26c001165ad6e8f9d191bc26bfd96e24c1b163adc370164 == data/v3_spine/rubric_hash_v2.txt == every verdict's rubric_hash_v2 field.

Palette-render rubric chain: docs/v3_spine_chicken_grease_palette_render_c21_rubric.md SHA 9eb5523cbd090c388e30b0b271cb1dffd4f321ed907c78be122f56cbad5e1879 == data/v3_spine/31a164f845f8e27e/palette_render/rubric_hash_v2.txt == verdict_palette.json.rubric_hash_v2.

Cross-branch anchors: Chicken Grease c5 operator delivery cc919559b4508b6b...; c33 scripts/palette_render/render_stem.py 214372d920a319a9...; Rome c20 verdict d2c2d704... All byte-identical across every audit in the arc.

Backref chain: each c21 verdict pins its c20 predecessor's verdict SHA live-recomputed at emit time.

A.7 Cumulative discipline metrics

- Eleven consecutive audits across two fanout arcs.
- ~275+ live SHA spot-checks with zero fabrications detected.
- Zero re-attempts on banned anti-patterns (c31 STILL_GAP + c35 SPINE VST3 state extraction, c11 CLAP HF SSL fetch, c22/c23/c25 M-EAR-1 Path A under N=55, c37 pretty_midi merge_partial).
- Peer-clone write disjointness held at sha16-subtree level across all six fanout branches.

A.8 Environment pins (unchanged across arc)

PYTHONHASHSEED=0; SOURCE_DATE_EPOCH=1756463424; TZ=UTC; LC_ALL=C.UTF-8; OMP_NUM_THREADS=1, MKL_NUM_THREADS=1, OPENBLAS_NUM_THREADS=1; interpreter /usr/bin/python3; torch.manual_seed(0); mido==1.3.3; SoundFont SHA 74594e8f...1cb0; MuScriptor model SHA ac80adbd...7fb97ec.

A.9 Egress state

HTTP 429 + tv_embedded (unchanged since c47). Not the two-consecutive media_ok=true unblock signal. Blocks the sfizz palette-fetch recovery path.

A.10 c22 root-conductor session (linear cycle)

Cycle	Researcher	Worker
20 (root dispatch)	e53ecb11-9b5c-487f-a1df-76dca6a3e9c5	—
21 (root integration)	—	2e3ef486-3d29-495e-a981-8df14a07f032
22 (root post-merge)	b0fa93b5-f576-406c-a3dc-de6dbb2aef69	—

Fanout-branch source sessions are recorded in each clone’s own report; six branches spanning three cycles (c20 fork 88d75f9754c3 × three clones, c21 fork 0a1b1dca4f9b × three clones) contribute their own per-cycle researcher/worker/auditor triples.

A.11 c22 handoff status

M-V3-FOCUS-1: in_progress/high with four internal-gate accepts on record and Peach Dream PARTIAL Option-3-terminal. Awaits operator ear on the three M-V3-FOCUS-1 A/B pairs to promote to validated per FD-6.

M-V3-CORPUS-1: still frozen. Unblock gated on operator ear accept on M-V3-FOCUS-1 per D-A.

M-V3-RULES-1, M-V3-EAR-1, M-V3-GEN-1: still frozen. Unchanged.

Chicken Grease palette-becomes-primary decision: pending operator D-D confirmation on the palette A/B pair with MINOR-3 mechanism discrimination framed explicitly.

Egress unblock: pending. Would unlock sfizz palette recovery path for a genuine sampler-based palette test if the D-D outcome directs the campaign that way.
