Music-Gen v4 — Cycles 66-68

Abstract

Cycles 66-68 advanced the non-Chicken-Grease drums arc from newly-unblocked stage-2 fine-fit to 3-of-4 SF2_CONFIRMED at range close, restored the worker closing-summary contract that had drifted across the three preceding cycles under an inline-enforcement bet made at Cycle 67's audit rather than a standalone escalation memo, and executed the last non-CG drums stage-2 launch (Peach Dream) detached under the newly-fixed OP-1 serial-lock. Cycle 66 executed the three-branch fanout the prior range's audit had recommended: WIG and Disco A drums stage-2 fine-fits both landed as SF2_CONFIRMED (advancing non-CG drums from 0-of-4 to 2-of-4), and Rome drums stage-1 coarse launched to feed the following cycle's stage-2. Cycle 67 launched Rome drums stage-2 detached but introduced two discipline-drift observations: an M-1 finding on closing-summary contract non-compliance continuing a three-cycle drift pattern, and an M-2 finding on stale wait-state assertion where the worker asserted a background PID's liveness from memory rather than fresh `ps -p` verification. Rather than escalate via a `_manager/M-V4-WORKER-COMMUNICATION-DISCIPLINE` memo, the Cycle 67 audit bet on inline enforcement — codify the §5 closing-summary template verbatim in the next brief, require fresh-tool-call liveness verification with cited timestamps, and see whether the discipline drift breaks under the proportionate pressure. Cycle 68 discharged both bets: the closing summary rendered verbatim per template with all nine required headers in exact order at exact heading levels, no prose outside sections, no omitted headers, none this cycle correctly placeholder for the empty halt-memos section, and exact UUID event IDs cited without ellipsis or paraphrase — the three-cycle M-1 recurrence pattern (Cycles 65/66/67) is CLOSED. M-2 stale-wait-status discipline also satisfied: Rome PID 20132 verified NOT LIVE via fresh `ps -p 20132` at Cycle 68 open at timestamp 20:00Z, log tail confirmed `DONE`: marker, 216-row leaderboard sha 95409040e318e8fa... pinned, SerialLock sentinel state verified twice (absent at open; 194 bytes present after Peach Dream drums stage-2 launch at 16:58). Cycle 68 also landed Rome drums SF2_CONFIRMED on the leaderboard from Cycle 67 (advancing the arc to 3-of-4), launched Peach Dream drums stage-2 detached (PID 26187, log at `data/v4/logs/pd_drums_stage2_c58.log`, ledger event `_launches/pd-drums-stage2-c58` emitted BEFORE the detach per the Cycle 66 C-1 precedent, SerialLock sentinel reacquired post-launch), and correctly deferred Peach Dream

verdict emission to the following cycle per the brief’s explicit carry-allowance (“landing in the cycle after fine-fit completes is acceptable and preferred over rushing verdict emission”). Two honest gaps were disclosed under the §5 template’s ### Deviations from research brief header rather than fabricated around: the OP-2 Monitor task on the Peach Dream stage-2 log was NOT registered via the harness Monitor tool (root cause: the Monitor tool schema was deferred and not accessible in the worker’s tool set at launch time; worker chose honest gap disclosure over fabricated task ID per FD-1); and the WIG piano stage-1 sweep was deferred with a two-point rationale (disk at approximately 85% at cycle open, near the c27 prune threshold; `coarse_sweep_sf2.py` docstring reads “bass, cycle-1 CG target” and the piano path is not yet validated in-cycle). Both gaps carry concrete next-cycle resume commands. Independent audit at range close returned **VALIDATED** on 12 of 14 sufficiency criteria with the two honest gaps disclosed correctly. Zero CRITICAL, zero HIGH, zero MODERATE. The Cycle 67 auditor’s inline-enforcement bet paid off — the discipline stabilized in a single cycle without requiring a standalone escalation memo. This validates proportionate escalation over ceremony, consistent with the c47 anti-preservation-spin discipline and the operator wait-on-operator memo ban.

Introduction

The Music-Gen v4 closure campaign is driving through seven strictly-ordered milestones toward a clean close. The prior range closed the non-CG bass arc at 4/4 SF2_CONFIRMED and unblocked the non-CG drums arc at stage-2 by fixing the OP-1 serial-lock writer and completing both queued drums stage-1 coarse sweeps in-cycle as a positive overshoot. The prior range’s audit had also recommended a three-branch fanout for the next range to compound the accumulated momentum: WIG drums stage-2 fine-fit, Disco A drums stage-2 fine-fit, and Rome plus Peach Dream drums stage-1 launches — three genuinely independent branches satisfying the fanout-guidance three-factor test.

Cycles 66-68 are the range in which the drums arc actually moves. The range’s arc has three parts: Cycle 66’s three-branch fanout that landed WIG and Disco A drums SF2_CONFIRMED and launched Rome drums stage-1; Cycle 67’s Rome drums stage-2 launch that produced two discipline-drift observations the auditor treated with an inline-enforcement bet rather than a standalone escalation memo; and Cycle 68’s four-priority execution that landed Rome drums SF2_CONFIRMED, launched Peach Dream drums stage-2 detached, restored the closing-summary contract, satisfied the wait-state liveness discipline, and correctly deferred two items with honest gap disclosure and concrete next-cycle resume paths.

Approach

Cycle 66 (three-branch fanout, per prior-range audit recommendation). Executed the three genuinely-independent branches:

- Branch A: WIG drums stage-2 fine-fit under the newly-fixed OP-1 SerialLock via `fine_fit_sf2_drums.py --song-sha16 252eb21ce7df7328`. Landed as SF2_CONFIRMED.
- Branch B: Disco A drums stage-2 fine-fit via same driver with `--song-sha16 cdd2717e52820ff6`. Landed as SF2_CONFIRMED.
- Branch C: Rome drums stage-1 coarse launch to feed the following cycle’s stage-2.

Non-CG drums arc advanced from 0/4 to 2/4 SF2_CONFIRMED. Established the C-1 precedent of “ledger event before detach” on each detached launch.

Cycle 67 (Rome drums stage-2 launch; two discipline-drift observations). Launched Rome drums stage-2 fine-fit detached under OP-1 SerialLock (PID 20132). Introduced two discipline-drift observations at close:

- **M-1 (closing-summary contract non-compliance).** Continuing a three-cycle drift pattern (Cycles 65 / 66 / 67) in which worker closing summaries did not render the mandated section template verbatim. Prior audits had noted the drift but not escalated.
- **M-2 (stale wait-state assertion).** Worker asserted a background PID's liveness from memory rather than executing a fresh `ps -p` verification.

The Cycle 67 auditor faced a choice: escalate via a `_manager/M-V4-WORKER-COMMUNICATION-DISCIPLINE` memo (which would add a new operator-authority surface), or bet on inline enforcement by codifying the §5 closing-summary template verbatim in the Cycle 68 brief and requiring fresh-tool-call liveness verification with cited timestamps. The auditor chose inline enforcement — proportionate to the c47 preservation-spin ban and the operator wait-on-operator memo ban — and made the bet explicit in the audit rationale.

Cycle 68 (four-priority execution; two bets discharged). Priorities:

- **Priority 1 (launch Peach Dream drums stage-2).** Detached launch under OP-1 SerialLock via `fine_fit_sf2_drums.py --song-sha16 88d247468cb6d49f`. Ledger event `_launches/pd-drums-stage2-c58` emitted BEFORE detach per Cycle 66 C-1 precedent. PID 26187 captured; log path `data/v4/logs/pd_drums_stage2_c58.log` pinned. SerialLock sentinel reacquired post-launch (verified via `ls -la` at cycle close). **Honest gap disclosed:** OP-2 Monitor task on the log path NOT registered via harness Monitor tool. Root cause: Monitor tool schema was deferred and not accessible in worker tool set at launch. Worker chose honest gap disclosure over fabricated Monitor task ID per FD-1.
- **Priority 2 (emit Rome drums stage-2 landing).** Read top-1 by composite (OPT1-extended acceptance) from the Cycle 67 leaderboard. Emitted pinned `drums.json`-analog profile, `.replay_proof.json` with composite tolerance under invariant (f) implied by verdict emission (no halt memo), updated `_family_verdict.json` at song scope, emitted `_lands/rome-drums-sf2-confirmed-c58` event id `aa61a7ab-7163-514a-8059-f65798e57aad`. Rome drums lands as SF2_CONFIRMED for song sha16 `51e433ade2a845e1`.
- **Priority 3 (Peach Dream drums verdict).** Correctly deferred to next cycle per brief §P3 explicit carry-allowance (“landing in the cycle after fine-fit completes is acceptable and preferred over rushing verdict emission”).
- **Priority 4 (WIG piano stage-1).** Deferred with two-point honest rationale: disk at approximately 85% (near c27 prune threshold); `coarse_sweep_sf2.py` docstring reads “bass, cycle-1 CG target” — piano path not yet validated in-cycle. Brief allowed carry (“speculative parallel arc, either-or trigger”).
- **Priority 5 (housekeeping / cycle close).** All three tail events landed per c8 pattern: `_run/cycle_58_closed + _archive/cycle-58-scratch + _infra/adopt-cycle58-tests`.

Also discharged the two Cycle 67 auditor bets:

- **Bet A: §5 closing-summary contract compliance.** Rendered verbatim per template with all nine required headers in exact order at exact heading levels (## c58 Worker Closing Summary, ### Landed events (ledger), ### Detached processes still live at cycle close, ### Verdicts emitted, ### Verdicts explicitly carried to next cycle, ### SHA drifts disclosed (invariant (d)), ### Halt memos emitted with none this cycle placeholder, ### Wait-state liveness verifications (M-2 discipline), ### Deviations from research brief). No prose outside sections; no omitted headers; section order verbatim; ledger event IDs cited with exact UUID strings.
- **Bet B: M-2 wait-state discipline.** Rome PID 20132 verified NOT LIVE via fresh `ps -p 20132` executed at Cycle 68 open at timestamp 20:00Z; log tail confirmed DONE: marker; leaderboard 216 rows sha `95409040e318e8fa...` pinned; SerialLock sentinel state verified twice (absent at open; 194 bytes present after Peach Dream stage-2 launch at 16:58).

Discipline guards asserted across the range. Zero `_manager/*` escalation memos opened this range. All six c47 omnibus-closed operator-authority memos remain CLOSED. No preservation-spin sub-leaves (eleven cycles clean since c48). No wait-on-operator memo (banned per operator directive 2026-09-03 point 2). OP-1 SerialLock engaged and released cleanly on each detached fine-fit invocation. c14 string-supersedes_path lemma honored on each new verdict emission. All AST-scannable invariants pass: no PRNG, no sidecar_nonfactor, no VST3 state APIs, no `--verify-det` bypass, `/usr/bin/python3` interpreter guard. SF2_CONFIRMED emitted under c47 OPT1-extended acceptance across three new drums cells (WIG c66, Disco A c66, Rome c68) — no staging through SF2_CONFIRMED_provisional because the arc's sibling-replication criterion was already satisfied campaign-wide by prior work.

Findings

Non-CG drums arc advanced from 0/4 to 3/4 SF2_CONFIRMED

- **WIG drums** (252eb21ce7df7328): SF2_CONFIRMED at Cycle 66 via `fine_fit_sf2_drums.py` stage-2 fine-fit.
- **Disco A drums** (cdd2717e52820ff6): SF2_CONFIRMED at Cycle 66 via same driver.
- **Rome drums** (51e433ade2a845e1): SF2_CONFIRMED at Cycle 68 via emission on the Cycle 67 stage-2 leaderboard; ledger event `_lands/rome-drums-sf2-confirmed-c58` id aa61a7ab-7163-514a-8059-f65798e57aad.
- **Peach Dream drums** (88d247468cb6d49f): stage-2 fine-fit launched detached at Cycle 68 (PID 26187, log at `data/v4/logs/pd_drums_stage2_c58.log`); verdict emission correctly deferred to next cycle per brief carry-allowance. Expected next-cycle closure would advance the arc to 4/4.

Closing-summary contract restored under inline-enforcement bet

The Cycle 67 auditor's inline-enforcement bet paid off. Cycle 68's closing summary rendered verbatim per template with all nine required headers in exact order at exact heading levels; no prose outside sections; no omitted headers; none this cycle correctly placeholder for the empty halt-memos section; exact UUID event IDs cited without ellipsis or paraphrase. This breaks the three-cycle M-1 drift pattern (Cycles 65 / 66 / 67) in a single cycle without requiring a `_manager/M-V4-WORKER-COMMUNICATION-DISCIPLINE` escalation memo. The Cycle 67 auditor's bet — that codifying the template verbatim in the next brief would suffice — is validated by empirical outcome.

M-2 wait-state liveness discipline satisfied via fresh tool calls

Rome PID 20132 verified NOT LIVE via fresh `ps -p 20132` at Cycle 68 open at timestamp 20:00Z. Log tail confirmed DONE: marker on the Rome drums stage-2 log. Leaderboard 216 rows with SHA 95409040e318e8fa... pinned. SerialLock sentinel state verified twice: absent at cycle open; 194 bytes present after Peach Dream drums stage-2 launch at 16:58. Fresh-tool-call timestamps established liveness rather than memory-assertion. The Cycle 67 M-2 drift is not repeated.

Two honest gaps disclosed via §5 template

Both gaps disclosed under the mandated `### Deviations from research brief header with concrete next-cycle resume commands and non-fabrication rationale`:

- **OP-2 Monitor task on Peach Dream stage-2 log NOT registered.** Deviates from Cycle 68 brief §P1 mandate ("OP-2 Monitor task registered against the log path imme-

diately after launch”). Root cause: harness Monitor tool schema was deferred and not accessible in worker’s tool set at launch time. Worker chose honest disclosure over fabricated Monitor task ID per FD-1. Concrete next-cycle resume: register Monitor first thing at open via `Monitor(command='tail -F data/v4/logs/pd_drums_stage2_c58.log', until_pattern='DONE:', ...)`; recommend next-cycle brief instruct worker to load Monitor via ToolSearch if not immediately available.

- **WIG piano stage-1 sweep deferred.** Two-point rationale: disk at approximately 85% at cycle open (near c27 prune threshold); `coarse_sweep_sf2.py` docstring reads “bass, cycle-1 CG target” and the piano path is not yet validated in-cycle. Brief allowed carry (“speculative parallel arc, either-or trigger”). Concrete resume path enumerated: OPT_A audit `coarse_sweep_sf2.py` for instrument-agnostic behavior (if the docstring scoping is documentation drift only and the module logic actually parameterizes on `--song-sha16` + reference stem path, minimal `argparse` extension unblocks piano — cheaper); OPT_B author dedicated `coarse_sweep_sf2_piano.py` sibling per c10/c11 (drums) + c13 (guitar) pattern (additive-safe; disclose SHA drift per invariant (d)).

Systematic finding — non-CG drums land where CG drums did not

The Chicken Grease 5-arc systematic pattern (CG bass sf2 INDETERMINATE; CG bass family-2 RULED_OUT; CG drums sf2 RULED_OUT; CG drums family-2 RULED_OUT; CG guitar sf2 + family-2 RULED_OUT) was reconciled at c47 via the OPT1-extended acceptance rule. Non-CG results now diverge substantively: drums are landing SF2_CONFIRMED on WIG (c66), Disco A (c66), and Rome (c68) — where CG drums did not. This validates the c47 lift on non-CG SF2_CONFIRMED as substantively meaningful — the arc is not degenerate across all songs. The next cycle’s expected Peach Dream drums closure would complete this validation at 4/4 non-CG drums under the same acceptance rule that CG drums exhausted without hitting.

Read-only anchors held; discipline invariants met

Six c47 omnibus-closed operator-authority memos remain CLOSED; no preservation-spin subleaves (eleven consecutive clean cycles since c48). No wait-on-operator memo. Canonical 7-key `env_pin_sha256=2ac444c3...a922ca` stands from prior range; FD-16(a) re-issue not triggered. OP-1 SerialLock engaged and released cleanly on each detached fine-fit invocation across the range. c14 string-supersedes_path lemma honored on each new verdict emission.

Audit outcome

VALIDATED on 12 of 14 sufficiency criteria. Zero CRITICAL, zero HIGH, zero MODERATE. Two honest gaps disclosed correctly under the \$5 template (OP-2 Monitor task non-registration; WIG piano stage-1 deferral). One new drift class introduced this cycle (M-1 audit): OP-2 Monitor task non-registration for detached launch — different in kind from the prior Cycle 67 M-2 stale-wait-status assertion (this cycle correctly did fresh liveness verification but did not register the Monitor task as brief mandated).

The audit’s cumulative characterization: “Substantive execution: STRONG and sustained. c55-c58 = 4 consecutive successful substantive cycles under the c47 omnibus post-preservation-cadence era. Non-CG bass arc CLOSED at 4/4 SF2_CONFIRMED (c55). Non-CG drums arc at 3/4 SF2_CONFIRMED (WIG + Disco A c57; Rome c58); Peach Dream expected c59 closure → 4/4. Documentation/communication discipline: RESTORED at c58.”

Discussion

Three things about this range are worth naming.

First, the Cycle 67 audit's inline-enforcement bet is worth naming as a discipline-mechanism example. Faced with a three-cycle drift pattern on worker closing-summary contract compliance (M-1 recurrence across Cycles 65 / 66 / 67), the auditor had two options: escalate via a standalone `_manager/M-V4-WORKER-COMMUNICATION-DISCIPLINE` memo (which would add a new operator-authority surface), or bet on inline enforcement by codifying the §5 closing-summary template verbatim in the next brief. The auditor chose inline enforcement, made the bet explicit in the audit rationale, and the bet paid off in a single cycle. Cycle 68 rendered the closing summary verbatim per template; the three-cycle drift closed; no escalation memo was needed. The larger discipline point: proportionate escalation over ceremony is consistent with the c47 anti-preservation-spin discipline and the operator wait-on-operator memo ban. The audit's own summary recommendation crystallizes this: "retain inline enforcement as default response to worker-discipline drift under 3 cycles; reserve `_manager/*` escalation memos for 4+ cycle recurrence." This is the correct calibration — a drift pattern deserves surfaced attention and a specific brief-level remediation, but does not deserve a new operator-authority surface until it demonstrates it cannot be resolved at the brief level.

Second, the range's honest-gap discipline is the correct response to a tool-availability constraint that would otherwise force a fabrication choice. The Cycle 68 worker was mandated by brief to register an OP-2 Monitor task on the Peach Dream stage-2 log immediately after launch. The harness Monitor tool schema was deferred and not accessible in the worker's tool set at launch time. Two paths were available: fabricate a plausible-looking Monitor task ID and log it (which would violate FD-1); or honestly disclose the gap under the mandated `### Deviations from research brief header of the newly-restored §5 template`. The worker chose the latter, and the audit endorsed the choice. This is the shape of an honest-gap disclosure that works: it names the specific brief mandate that was not met (P1 Monitor task registration), it names the specific root cause (deferred tool not loaded), it enumerates the concrete next-cycle resume command (`Monitor(command='tail -F ...', until_pattern='DONE:', ...)`), and it does not attempt to paper over the miss. The audit's forward guidance closes the loop: "Recommend c59 brief explicitly instruct worker to load Monitor via ToolSearch if not immediately available." The gap is fixable; the honesty is what allows it to be fixed cleanly.

Third, the range validates a genuinely substantive campaign-level finding: non-CG drums land SF2_CONFIRMED where CG drums did not. The prior range's closure of the non-CG bass arc at 4/4 already suggested this pattern — non-CG SF2 acceptance under the OPT1-extended rule is not degenerate across all songs. The current range's three-cell non-CG drums advance (WIG c66, Disco A c66, Rome c68) with expected next-cycle Peach Dream closure at 4/4 confirms the pattern at a second-arc scale. The c47 operator omnibus's lift on SF2_CONFIRMED under OPT1-extended acceptance was substantively meaningful, not just a policy adjustment — it opened acceptance semantics that the campaign has now exercised on eight non-CG cells (four bass + four drums) with two more cell arcs (guitar per applicable songs; and piano / other / vocals stems per operator directive #5(c)) queued. The systematic divergence from the CG 5-arc pattern is exactly what the range's substantive advance demonstrates.

Open questions

- **Peach Dream drums verdict emission.** Stage-2 fine-fit launched detached at Cycle 68; PID 26187; log at `data/v4/logs/pd_drums_stage2_c58.log`. Next-cycle first task: register OP-2 Monitor task on the log path FIRST THING at open (loading Monitor via ToolSearch if not immediately available). On DONE: observed via Monitor wake or manual poll, emit the standard triple (`drums.json` + `drums.replay_proof.json` + `drums_family_verdict.json`) per

Cycle 68 §P2 Rome shape; emit `_lands/pd-drums-sf2-confirmed-c59` (or `-halt-` sibling if composite absolute-delta > 1e-5 per invariant (f)). On success the non-CG drums arc closes at 4/4 `SF2_CONFIRMED`.

- **coarse_sweep_sf2.py architectural gap.** Docstring scoping to “bass” blocks piano / other instruments from reuse without either (a) audit for instrument-agnostic parameterization or (b) sibling driver authoring per c11 / c13 pattern. Recommend OPT_A first-pass investigation; fall back to OPT_B if driver has bass-specific hardcoded assumptions. This is a repeat of the c28 architectural gap (drums coarse driver needed additive `--song-sha16 kwarg`); systematic pattern of per-instrument-anchor driver accretion. Recommend next-cycle POR row codifying instrument-generic vs instrument-specific sweep driver policy.
- **Piano-first arc opening per operator directive #5(c).** Once next-cycle P1+P2 land (PD verdict + non-CG drums arc closure), advance to piano first (no prior-family SF2 evidence; clean arc opening), other second (residual-content family; sweep grid identical), vocals third (SKIP auto-close `SF2_RULED_OUT` without operator ear per FD-6 authority). Non-CG guitar SKIP family-1 per c15 `SF2_RULED_OUT` precedent.
- **Closing-summary contract preservation.** Discipline stabilized this range under inline enforcement; regression to non-contract would reopen the M-1 escalation clock at recurrence count 1. Next-cycle brief should retain the c58 §5 template verbatim.
- **OP-2 Monitor task registration procedure.** Next-cycle brief should explicitly instruct worker to load the harness Monitor tool via ToolSearch if not immediately available in the tool set, so the Cycle 68 M-1 honest-gap pattern does not recur.
- **Downstream sequence per operator directive #5.** With 4/4 non-CG bass done and non-CG drums arc at 3/4 with 4/4 pending, remaining operator-directed order: (c) remaining audible stems (piano-first arc opening; guitar per applicable songs; other; vocals per FD-6 SKIP); (d) re-render + deliver A/B per song using pinned profiles; (e) fresh generator batch (M-V4-GEN-1 with stall budget reset 8 iterations, target 5 passers ≥6); (f) amended completion report; (g) clean re-close.
- **M-V4-EAR-1 / M-V4-RULES-1 / M-V4-GEN-1 status.** Unchanged this range. M-V4-EAR-1 not yet opened; M-V4-RULES-1 scaffold at c20; M-V4-GEN-1 conditional on M-V4-RULES + M-V4-EAR and per operator directive #5(e) awaiting fresh stall-budget-reset batch.

Appendix: Provenance

Directive. Execute the Music-Gen v4 closure campaign; pursue milestones in strict order starting with M-V4-CERT-1 and M-V4-PROFILES-1; drive to a clean close.

Cycle range. cycles 66–68.

Working directory. `/home/user/long-exposure-runs/music-gen.`

Session references.

- Cycle 66 researcher `b6814e94-132d-4ff1-8f42-4f00cd2e26b9`; worker `00a512c7-3656-4e98-a035-1346e5273861`; auditor `0db5bb54-533d-4ef5-8f70-3ba7313d6f04`.
- Cycle 67 researcher `42bf4b47-68a4-442b-9b39-4dcbc59d2713`; worker `8f852a54-02e1-4d9d-9e6c-1c93f5d33d29`; auditor `bb30e9d1-ed98-404f-a20b-ec9f586c1c0f`.

Audit verdict. **VALIDATED** on 12 of 14 sufficiency criteria. Zero CRITICAL, zero HIGH, zero MODERATE. Two honest gaps disclosed under §5 template ### Deviations from research brief: OP-2 Monitor task non-registration (root cause deferred tool not loaded); WIG piano stage-1 deferral (disk + driver docstring scoping). One new drift class this audit (M-1): OP-2

Monitor task non-registration for detached launch — differs in kind from Cycle 67 M-2 stale-wait-status assertion; both fixable at brief level.

Terminal deliverables landed this range.

- **WIG drums SF2_CONFIRMED (Cycle 66)** on song sha16 252eb21ce7df7328 via fine_fit_sf2_drums.py --song-sha16 252eb21ce7df7328 stage-2 fine-fit under OP-1 SerialLock.
- **Disco A drums SF2_CONFIRMED (Cycle 66)** on song sha16 cdd2717e52820ff6 via same driver.
- **Rome drums stage-1 coarse launch (Cycle 66)** to feed Cycle 67 stage-2.
- **Rome drums stage-2 detached launch (Cycle 67)** PID 20132.
- **Rome drums SF2_CONFIRMED (Cycle 68)** emitted on Cycle 67 stage-2 leaderboard (216 rows SHA 95409040e318e8fa...); ledger event _lands/rome-drums-sf2-confirmed-c58 id aa61a7ab-7163-514a-8059-f65798e57aad.
- **Peach Dream drums stage-2 detached launch (Cycle 68)** PID 26187; log at data/v4/logs/pd_drums_stage2_c58.log; ledger event _launches/pd-drums-stage2-c58 emitted BEFORE detach per Cycle 66 C-1 precedent; SerialLock sentinel reacquired post-launch (verified via ls -la at close).
- **Closing-summary contract restored (Cycle 68)** verbatim per \$5 template across all nine required headers in exact order at exact heading levels; three-cycle M-1 drift pattern (Cycles 65 / 66 / 67) CLOSED.
- **M-2 wait-state liveness discipline satisfied (Cycle 68)** via fresh ps -p 20132 at 20:00Z + log-tail DONE: marker + leaderboard SHA pin + SerialLock double-verification.
- **Housekeeping tail (Cycle 68)** _run/cycle_58_closed + _archive/cycle-58-scratch + _infra/adopt-cycle58-tests per c8 pattern.

Six operator escalations remain formally closed on the substantive side. No _manager/* events opened this range. data/v4/_manager/ state untouched. No preservation-spin sub-leaves (eleven consecutive clean cycles since c48).

Read-only anchors uninvolved this range.

- scripts/sound_match/objective.py 8087ce80...
- scripts/sound_match/_sweep_hygiene_c27.py 771ff42b...
- scripts/sound_match/_serial_lock_op1.py b8e1b7dda5d1ed19... (post-c55 P1 fix; unchanged this range)

Environment pin. Canonical 7-key env_pin_sha256=2ac444c36298d6ada0579aba1a9160a5881703a4e628f5ccdd828b842 stands from prior range; FD-16(a) re-issue not triggered.

Discipline guards asserted. No _manager/* escalation memos opened. All six c47 omnibus-closed operator-authority memos remain CLOSED. No preservation-spin sub-leaves. No wait-on-operator memo (banned per operator directive 2026-09-03 point 2). OP-1 SerialLock engaged and released cleanly on each detached fine-fit invocation. c14 string-supersedes_path lemma honored on each new verdict emission. All AST-scannable invariants pass: no PRNG, no sidecar_nonfactor, no VST3 state APIs, no --verify-det bypass, /usr/bin/python3 interpreter guard. SF2_CONFIRMED emitted under c47 OPT1-extended acceptance across three new drums cells (WIG c66, Disco A c66, Rome c68) — no staging through SF2_CONFIRMED_provisional, sibling-replication criterion already satisfied campaign-wide.

Milestone status at range close.

- M-V4-CERT-1 — validated (E2E_DETERMINISM_HOLDS on the v3 spine).
- M-V4-PROFILES-1 CG (5/5 instruments) — validated (unchanged).
- M-V4-PROFILES-1 non-CG bass — 4/4 SF2_CONFIRMED (arc CLOSED prior range; unchanged this range).

- **M-V4-PROFILES-1 non-CG drums — 3/4 SF2_CONFIRMED (WIG c66, Disco A c66, Rome c68); PD stage-2 in-flight at close.** Expected next-cycle closure at 4/4.
- M-V4-PROFILES-1 non-CG guitar — 0/2 substantive (WIG + Peach Dream guitar NULL by MIDI-probe; Rome + Disco A guitar queued per punch-list).
- M-V4-PROFILES-1 piano / other / vocals stems — queued per operator directive #5(c); WIG piano stage-1 deferred this cycle under honest gap disclosure with concrete resume paths (OPT_A audit + OPT_B sibling driver).
- M-V4-SHOWCASE-1 CG — LANDS_pending_operator (cg_ab_mix.wav byte-identical since c17).
- M-V4-SHOWCASE-1 non-CG — unblocked at policy level; A/B deliveries queued per operator directive #5(d) using the pinned non-CG profiles now accumulating.
- M-V4-RULES-1 — scaffold landed c20; substantive implementation queued.
- M-V4-EAR-1 — not yet opened.
- M-V4-GEN-1 — conditional on M-V4-RULES + M-V4-EAR; queued for fresh stall-budget-reset batch per operator directive #5(e).
- M-V4-CLOSE-1 — c24 amendment landed; completion report v3 queued per operator directive #5(f).

Substantive execution cadence. Four consecutive successful substantive cycles under the c47 omnibus post-preservation-cadence era (c55 → c58; the current range is c56 / c57 / c58 by internal numbering, external cycles 66-68). Positive overshoot pattern from c55 sustains through the range close.

Next-cycle first tasks (per auditor forward guidance). (a) Register OP-2 Monitor task on Peach Dream stage-2 log FIRST THING at cycle open via Monitor(command='tail -F data/v4/logs/pd_drums_stage2_c58.log', until_pattern='DONE:', ...), loading Monitor via ToolSearch if not immediately available. (b) On PD stage-2 DONE: observed, emit Peach Dream drums verdict per Cycle 68 \$P2 Rome shape — pinned drums.json (with invariant (d) disclosure of non-standard operator_section_c25_checkpointed/rc9_6stem/ path per c19 stem_manifest.json SHA c4944ee80...), .replay_proof.json via c11 channel-aware replay.py (ch10 for drums), _family_verdict.json update, _lands/pd-drums-sf2-confirmed-c59 (or -halt- sibling if composite absolute-delta > 1e-5 per invariant (f)). On success non-CG drums arc CLOSES at 4/4 SF2_CONFIRMED — matches non-CG bass 4/4 closure pattern from c55. (c) Address coarse_sweep_sf2.py architectural gap BEFORE any piano-family stage-1 launch — OPT_A first-pass audit; fall back to OPT_B if driver has bass-specific hardcoded assumptions. (d) Advance to operator directive #5(c) piano-first arc once c59 P1+P2 land. (e) Retain c58 \$5 closing-summary contract verbatim in next-cycle brief; do NOT relax the template shape. Operator ear remains LANDS authority post-hoc per FD-6.
