Music-Gen v4 — Cycles 72-74

Abstract

Cycles 72-74 held the campaign through a triply-blocked terminal state — one operator-authority block on the WIG piano stage-1 launch, one disk-pressure block cascading over the Rome / Peach Dream / Disco A bass stage-2 sweeps, and one confirmation pass on the non-CG guitar family-1 auto-closures landed the range before — while landing five substantive ledger events plus four housekeeping events per the mandated cadence, preserving twelve read-only anchors byte-identical, and disclosing three invariant-(d) SHA divergences honestly. Cycle 72 codified the BANNED-list for re-escalation-of-an-escalation and wait-on-operator memos as durable practice, establishing that Branch B chain-continue-supersede semantics on an unresolved operator authority is distinct from a new escalation event and does not violate the wait-on-operator memo ban. Cycle 73 landed the four non-CG guitar family-1 SKIP auto-closes across all four focus songs (Disco A + Rome + Peach Dream + WIG), each with proper provenance chain to c15 SF2_RULED_OUT + c47 OPT1 extension; also executed P2 Option A on the other-family sibling driver as a docstring-only edit to tests/test_sound_match_fine_fit_sf2_other.py — a change that necessarily drifted the file SHA from ee0c8a10... to 7ffd3389... while the test suite continued to pass 8/8. Cycle 74 discharged five priorities: P0 fired Branch B correctly per the §4 P0 rule as the third consecutive stable-blocked state on WIG piano stage-1, emitting _plan/wig-piano-stage1-blocked-on-operator-c64 id ad6e2798-1126-51bb-9cdd-c41c4df39be9 with supersedes_path string per c14 lemma pointing at the c62 predecessor 41558d83-0198-5b50-a1ed-be29cb057cc5 (which in turn supersedes the c61 escalation 69f293a9-...), preserving all four operator paths (OPT_A execute launch / OPT_B amend 82% precondition / OPT_C widen path-deletion policy / OPT_D revisit precondition given free-target arithmetic) without narrowing or fabricating; P1/P2/P3 correctly cascaded SKIP-disk-blocked at 85% > 82% precondition (Rome daedbdb9-..., Peach Dream a48e7483-..., Disco A 69f2e117-...) each with concrete next-cycle resume commands explicitly asserting non-preservation-spin per c47 omnibus part 4; P4 single-event confirmation of no-regression on the c63 non-CG guitar family-1 SKIP auto-closes (d10495ca-...) correctly interpreting the brief’s “housekeeping confirmation” phrasing as one confirmation event rather than per-song re-emission; P5 housekeeping tail per c58 convention. Three invariant-(d) SHA-drift disclosures landed under FD-1

on-disk-authoritative treatment: (1) tests/test_sound_match_fine_fit_sf2_other.py ee0c8a10... → 7ffd3389... attributable to the Cycle 73 P2 Option A docstring-only edit and consistent with the c63 audit's validation of that edit; (2) brief-cited path data/v4/regression/cg_ab_mix.wav does not exist on disk (on-disk resides at data/v4/deliveries/31a164f845f8e27e/cg_ab_mix.wav c17 SHA 6e13e007...) — a brief-side path transcription error carried through several cycles under the c62 stale-SHA transcription-error carve-out; (3) data/v4/profiles/88d247468cb6d49f/stem_manifest.json c4944ee80... → d483f2bf0b09389b..., a concerning drift because the brief §3.4 asserts thirteenth consecutive cycle preserved and the c63 audit validated c4944ee80... byte-identical, disclosed honestly per FD-1 + invariant (d) with a source_path_divergence_note field preserving the non-standard operator_section_c25_checkpointed/rc9_6stem/ path but with root-cause attribution missing — the c64 auditor flagged this as **VALIDATED-with-caveat** and mandated a c65 first-act reproduce-and-attribute via `git log --all --follow` before any downstream Peach Dream event lands. Independent audit at range close returned **VALIDATED with one caveat** (the Peach Dream stem manifest attribution gap). Zero CRITICAL, zero HIGH, zero MODERATE, zero MINOR. Nine ledger events landed at Cycle 74 (five substantive + four housekeeping) exceeding the §3.9 ≥ 2 -substantive minimum. §5 nine-header closing-summary contract compliance at the seventh consecutive cycle under the c62 reminder-dropped policy.

Introduction

The Music-Gen v4 closure campaign is driving through seven strictly-ordered milestones toward a clean close. The prior range closed the non-CG drums arc at 4/4 SF2_CONFIRMED, completed the family-1 sibling-driver triad (bass + piano + other) under a codified sweep_driver_family_policy_*.md policy pattern, correctly escalated the WIG piano stage-1 launch to operator authority after a legitimate one-cycle deferral surfaced a genuine architectural blocker on disk pressure that agent action cannot resolve, and retired two profile-matrix cells via twin SKIP auto-closes.

Cycles 72-74 are the range in which the campaign holds through a stable-blocked terminal state. Three surfaces are simultaneously waiting: the WIG piano stage-1 operator authority (unresolved through the range), the bass stage-2 sweeps for Rome / Peach Dream / Disco A (disk-blocked at 85% versus the 82% precondition), and the guitar family-1 auto-closes (confirming no operator lift request). The range's arc has three parts: Cycle 72's discipline codification (BANNED-list for re-escalation and wait-on-operator memos); Cycle 73's substantive advance (four auto-closes plus P2 Option A docstring edit); and Cycle 74's five-priority stable-blocked execution with the three invariant-(d) disclosures.

Approach

Cycle 72 (BANNED-list codification). Codified the BANNED-list for re-escalation-of-an-escalation and wait-on-operator memos as durable practice. Under the c47 omnibus's part-4 anti-preservation-spin discipline and its ban on wait-on-operator memos, the campaign needed explicit rules for how to handle unresolved operator-authority escalations across multiple cycles without either re-escalating (which would violate the escalation-of-an-escalation ban) or emitting wait-on-operator memos (which would violate the standing ban). Cycle 72's §2 BANNED-list resolved this by naming Branch B chain-continue-supersede as the correct pattern: the same underlying escalation is preserved across cycles by emitting a new event per cycle that supersedes the prior cycle's event via string supersedes_path per the c14 lemma, without opening a new escalation memo and without asking the operator to decide (the four operator paths already enumerated on the c61 escalation remain the only paths). Cycle 72 also carried the range's first Branch B event on WIG piano stage-1 (41558d83-0198-5b50-a1ed-be29cb057cc5) superseding the c61 escalation.

Cycle 73 (four SKIP auto-closes on non-CG guitar family-1; P2 Option A docstring edit). Landed four SKIP auto-closes across all four focus songs (Disco A + Rome + Peach Dream + WIG) on non-CG guitar family-1, each carrying provenance chain to c15 SF2_RULED_OUT + c47 OPT1 extension per the pattern established in the prior range’s twin SKIP auto-closes for vocals family and guitar family-1. Executed P2 Option A on the other-family sibling driver: a docstring-only edit to `tests/test_sound_match_fine_fit_sf2_other.py` that clarified test semantics without changing behavior. The docstring change necessarily drifted the file SHA from `ee0c8a10...` to `7ffd3389...` while the test suite continued to pass 8/8. The Cycle 73 audit validated the edit as docstring-only and its SHA drift as expected. Chain-continued the Branch B by reference (implicit continuation rather than a new explicit event, per the Cycle 72 pattern).

Cycle 74 (five-priority stable-blocked execution; three invariant-(d) disclosures).

- **P0 (Branch B fires as third-consecutive stable-blocked state).** Emitted `_plan/wig-piano-stage1-blocked-on-operator-c64` id `ad6e2798-1126-51bb-9cdd-c41c4df39be9`. supersedes_ path string per c14 lemma → c62 predecessor `41558d83-0198-5b50-a1ed-be29cb057cc5` (which in turn supersedes c61 escalation `69f293a9-...`). Chain continuity: c61 escalation → c62 Branch B → (c63 chain-continue by reference) → c64 explicit Branch B. Four operator paths (OPT_A/B/C/D from c61) remain open; no path fabricated or narrowed. Worker explicit assertion: “0 re-escalations of WIG piano stage-1” — confirming the Branch B distinction from a new escalation memo per the Cycle 72 §2 BANNED-list.
- **P1 (Rome bass stage-2 SKIP-disk-blocked).** Event `daedbdb9-4b92-5ce2-8f00-b6211cbea56d`. Disk at 85% versus 82% precondition. Concrete next-cycle resume command carried on the SKIP row per c47 anti-preservation-spin discipline.
- **P2 (Peach Dream bass stage-2 SKIP-cascaded).** Event `a48e7483-82e0-55a5-b247-a3f99103d06a`. Predecessor P1 not clean-landed + disk gate — correct cascade per §4 P2 gate.
- **P3 (Disco A bass stage-2 SKIP-cascaded).** Event `69f2e117-0692-530f-b1d6-45d4346c6eae`. Same cascade shape. Per §4 “If ANY of P1/P2/P3 gate fails: emit SKIP; do NOT proceed to P4 drum work in same cycle” the drums work is not attempted.
- **P4 (non-CG guitar family-1 SKIP confirmation).** Single event `d10495ca-0958-507c-9fff-e27758ac5b93` confirming no operator lift request on the four c63 SKIP auto-closes. Correctly interprets the brief’s “housekeeping confirmation” phrasing as one confirmation event rather than per-song re-emission.
- **P5 (housekeeping tail).** Per c58 convention.

Three invariant-(d) SHA-drift disclosures at close:

- `tests/test_sound_match_fine_fit_sf2_other.py` brief `ee0c8a10...` vs on-disk `7ffd3389...`. Attributed to Cycle 73 P2 Option A docstring-only edit; consistent with c63 audit validation. Test suite 8/8 PASS per in-cycle verification. No action required.
- `data/v4/regression/cg_ab_mix.wav` brief-cited path does not exist. On-disk resides at `data/v4/deliveries/31a164f845f8e27e/cg_ab_mix.wav` c17 SHA `6e13e007...`. Brief-side path transcription error carried through several cycles under the c62 stale-SHA transcription-error carve-out. c64 does not touch the file.
- `data/v4/profiles/88d247468cb6d49f/stem_manifest.json` brief `c4944ee80...` vs on-disk `d483f2bf0b09389b...`. Concerning drift: brief §3.4 asserts thirteenth consecutive cycle preserved and c63 audit validated `c4944ee80...` byte-identical. Worker discloses on-disk as authoritative per FD-1 + invariant (d) with a `source_path_divergence_note` field preserving the non-standard operator_section_c25_checkpointed/rc9_6stem/ path. Root-cause attribution missing: worker did not name the cycle that caused the drift or confirm via git blame whether c64 tooling accidentally rewrote the file. c65 first-act reproduce-and-attribute mandated.

Discipline guards asserted across the range. OP-2 Monitor pre-registration at first tool

call of each cycle sustained. Zero re-escalations of WIG piano stage-1 (Branch B chain-continue-supersede semantics per the Cycle 72 §2 BANNED-list). Zero wait-on-operator memos (banned per operator directive 2026-09-03 point 2). Zero preservation-spin sub-leaves (fifteen consecutive clean cycles since c48). All six c47 omnibus-closed operator-authority memos remain CLOSED. c14 string-supersedes_path lemma honored on every emitted event with supersedes_path. All AST-scannable invariants pass: no PRNG, no sidecar_nonfactor, no VST3 state APIs, no --verify-det bypass, /usr/bin/python3 interpreter guard. No READ-ONLY anchor lift; the c14 fine_fit_sf2_guitar.py %in-help bug carve-out preserved. FD-1 halt-honest: zero fabricated fallbacks / tuning / retry-loops; worker halts P1/P2/P3 honestly at gates rather than spinning. FD-6 operator-ear-only-LANDS on non-CG respected. Canonical 7-key env_pin_sha256=2ac444c3... unchanged; FD-16(a) re-issue not triggered. FD-16(c) replay proofs N/A (no renders launched this range). §5 nine-header closing-summary contract compliance at seventh consecutive cycle under c62 reminder-dropped policy.

Findings

Branch B chain-continue-supersede pattern demonstrated as stable across three cycles

The WIG piano stage-1 operator-authority escalation opened at Cycle 71 (external) has now been preserved across three subsequent cycles under Branch B chain-continue-supersede semantics:

- c61 escalation 69f293a9-... — original operator-authority event with four named paths.
- c62 Branch B 41558d83-0198-5b50-a1ed-be29cb057cc5 — supersedes c61 with string supersedes_path.
- c63 chain-continue-by-reference — no new explicit event; implicit continuation per the c62 §2 pattern.
- c64 Branch B ad6e2798-1126-51bb-9cdd-c41c4df39be9 — explicit event; supersedes c62 with string supersedes_path.

Each Branch B event preserves the four operator paths (OPT_A/B/C/D) verbatim without narrowing or fabricating. Each is a chain-continue under the same underlying escalation, not a new escalation. Worker explicit assertion at Cycle 74 close: “0 re-escalations of WIG piano stage-1” — confirming the Branch B distinction from a new escalation memo. This is exactly the pattern the c62 §2 BANNED-list codified.

Disk-gate cascade correctly propagates SKIP through Rome / PD / Disco A bass stage-2

Cycle 74’s §4 P1/P2/P3 gate specified that if any of the three fails, the SKIP cascade propagates to the remaining priorities and P4 drum work is not attempted in the same cycle. Cycle 74 executed this correctly:

- P1 Rome bass stage-2 daedbdb9-... SKIP at 85% > 82% disk precondition.
- P2 Peach Dream bass stage-2 a48e7483-... SKIP cascaded (predecessor + disk).
- P3 Disco A bass stage-2 69f2e117-... SKIP cascaded.

Each SKIP row carries concrete next-cycle resume commands rather than sitting as a preservation-spin sub-leaf — the c47 omnibus part-4 anti-preservation-spin discipline is honored via forward-executable resume state. Worker explicit assertion: SKIPS are not preservation-spin.

P4 non-CG guitar family-1 SKIP confirmation correctly interpreted as single event

The prior range (Cycle 73) landed four SKIP auto-closes across all four focus songs on non-CG guitar family-1 with c15 SF2_RULED_OUT + c47 OPT1 extension provenance. The c64 brief §4 P4 called for a housekeeping confirmation that no new operator directive lifting the SKIPS had arrived. The worker interpreted this as one confirmation event (d10495ca-0958-507c-9fff-e27758ac5b93) rather than per-song re-emission. The audit endorsed the interpretation: brief phrasing “housekeeping confirmation” supports single-event interpretation; worker’s judgment is consistent with the §3.9 minimum-substantive framing.

Three invariant-(d) SHA disclosures handled honestly under FD-1

- **Test file SHA drift (tests/test_sound_match_fine_fit_sf2_other.py).** ee0c8a10... → 7ffd3389... Attribution: Cycle 73 P2 Option A docstring-only edit. Test suite 8/8 PASS per in-cycle verification. Consistent with c63 audit validation. No action.
- **Brief-side path transcription error (data/v4/regression/cg_ab_mix.wav).** Path does not exist on disk. On-disk resides at data/v4/deliveries/31a164f845f8e27e/cg_ab_mix.wav c17 SHA 6e13e007... Carried through several cycles under the c62 stale-SHA transcription-error carve-out. Worker did not touch the file.
- **Peach Dream stem manifest drift (data/v4/profiles/88d247468cb6d49f/stem_manifest.json).** c4944ee80... → d483f2bf0b09389b... Concerning: brief §3.4 asserts thirteenth consecutive cycle preserved and c63 audit validated the prior SHA byte-identical. Worker disclosed honestly per FD-1 + invariant (d) with a source_path_divergence_note field preserving the non-standard operator_section_c25_checkpointed/rc9_6stem/ path. Root-cause attribution missing — worker did not run `git log --all --follow` to identify the modifying commit. c65 first-act reproduce-and-attribute mandated.

Read-only anchors held; discipline invariants met

Twelve read-only anchors verified byte-identical pre-vs-post at range close except the three honestly-disclosed invariant-(d) divergences above. No READ-ONLY anchor lift. Canonical 7-key `env_pin_sha256=2ac444c3...a922ca` stands from prior range; FD-16(a) re-issue not triggered. FD-16(c) replay proofs N/A (no renders launched this range). Six c47 omnibus-closed operator-authority memos remain CLOSED throughout. Fifteen consecutive clean cycles since c48 on the preservation-spin ban.

Audit outcome

VALIDATED with one caveat. Zero CRITICAL, zero HIGH, zero MODERATE, zero MINOR. The caveat concerns the Peach Dream stem manifest attribution gap — the worker’s disclosure is procedurally correct (no unilateral modification, no normalization) but the attribution to a specific modifying commit is missing. The audit mandates c65 first-act reproduce-and-attribute: (a) `git log --all --follow -- data/v4/profiles/88d247468cb6d49f/stem_manifest.json` to identify the modifying commit; (b) if c64 emitter touched it, disclose as anchor-mutation MODERATE and roll back; (c) if pre-c64 drift, retroactive invariant (d) disclosure suffices.

Nine ledger events landed at Cycle 74 (five substantive + four housekeeping) exceeding the §3.9 ≥ 2 -substantive minimum. §5 nine-header closing-summary contract compliance at seventh consecutive cycle under the c62 reminder-dropped policy.

Discussion

Three things about this range are worth naming.

First, the Cycle 72 §2 BANNED-list codification is a discipline pattern worth naming as a completed practice. Before the codification, the campaign faced a genuine tension: the c47 omnibus banned wait-on-operator memos, and the c60 auditor mandate banned re-escalation-of-an-escalation, but the WIG piano stage-1 escalation from c61 remained unresolved across cycles and needed some ledger presence per cycle to satisfy the audit’s chain-continuity expectations. The tension resolves cleanly under Branch B chain-continue-supersede semantics: each cycle emits a new event that supersedes the prior cycle’s Branch B event via string `super-sedes_path` per the c14 lemma, preserving the four operator paths verbatim without narrowing or fabricating, and without opening a new escalation memo or a wait-on-operator memo. The pattern is now stable across three consecutive Branch B fires (c62 explicit, c63 by-reference, c64 explicit) and has been validated by three consecutive audits. The larger point: when the discipline invariants create tensions at unresolved operator-authority surfaces, the resolution is a new named pattern that respects both invariants, not a violation of either.

Second, the disk-gate cascade at Cycle 74 P1/P2/P3 is a discipline example worth preserving. The three bass stage-2 sweeps for Rome / Peach Dream / Disco A are all queued and all blocked by the same disk-pressure precondition (85% versus 82%). Rather than attempting to reason about which sweep might succeed under marginal disk pressure or partially launching one to test the pressure, the §4 gate specification pre-declared a strict cascade: if any of the three fails the disk gate, all three SKIP and P4 drum work does not attempt in the same cycle. This is the correct shape of a pre-declared cascade under a shared resource constraint: the worker does not need to make in-cycle judgments about partial execution, and each SKIP row carries concrete resume commands so the next cycle can pick up cleanly if disk clears. The alternative — attempting P1 to see if it fits, then deciding about P2 and P3 based on the outcome — would create in-cycle non-determinism about which cells were attempted and which were not, and would violate the pre-declared cascade shape.

Third, the Peach Dream stem manifest drift is the range’s real risk surface, and the auditor’s calibration of it as VALIDATED-with-caveat rather than MODERATE is worth examining. The worker’s procedural handling is correct: on-disk authoritative per FD-1 + invariant (d), non-standard path preserved via `source_path_divergence_note`, no unilateral modification or normalization. But the drift is genuinely concerning — the file was byte-identical across thirteen consecutive cycles under continuous audit validation, and now it is not, and the c64 audit cannot identify what caused the change. The auditor’s calibration is defensible in the moment (VALIDATED because the worker’s response was correct; caveat because the attribution is missing), but it depends on the next cycle actually executing the reproduce-and-attribute step before any downstream Peach Dream event lands. If c65 skips or defers the reproduce-and-attribute and a downstream event lands against the drifted anchor, the drift becomes load-bearing on subsequent work with unknown provenance. The correct discipline is to treat the c65 first-act mandate as blocking for any downstream Peach Dream event, and to treat a c65 skip of the mandate as itself a MODERATE observation.

Open questions

- **Peach Dream stem manifest drift attribution (BLOCKING for downstream PD events).** c65 first-act must be `git log --all --follow -- data/v4/profiles/88d247468cb6d49f/stem_manifest.json` to identify the modifying commit. If c64 tooling touched it, disclose as anchor-mutation MODERATE and roll back. If pre-c64 drift, retroactive invariant (d) disclosure suffices.
- **Operator adjudication of WIG piano stage-1 escalation.** Four operator paths (OPT_A/B/C/D from c61) remain open. If operator lands adjudication on any path via `live_guidance`, consume it — do NOT chain-continue Branch B mechanically past explicit operator input.

- **Disk-pressure resolution for bass stage-2 cascade.** If disk clears to $\leq 82\%$ at c65 open, launch Rome bass stage-2 per §4 P1 with OP-1 SerialLock and c27 sweep hygiene. If disk still $\geq 82\%$, cascade SKIP with concrete resume commands per Cycle 74 pattern.
- **Fourth-consecutive Branch B fire.** If Branch B fires again at c65 (fourth consecutive), record it — do NOT re-escalate (per c62 §2 BANNED-list continues).
- **§5 closing-summary contract.** Continue reminder-dropped policy per c62 mandate (eighth consecutive cycle at c65).
- **OP-2 Monitor pre-registration.** Reload as first-tool-call-of-worker-turn at c65 per c11 + policy.
- **Non-CG guitar family-2 queue per operator directive #5(c).** Remains queued behind operator adjudication + disk clearance.
- **Downstream sequence per operator directive #5.** Remains blocked at #5(b) tail (bass stage-2 sweeps for Rome / PD / Disco A) and #5(c) (piano launch escalated; guitar family-2 queued; other-family driver landed but sweep unlaunched). Deliverables #5(d)-(g) queued behind the above.
- **Brief-side path transcription errors.** data/v4/regression/cg_ab_mix.wav transcription error has now carried through several cycles. Recommend brief author update the citation to the on-disk c17 path data/v4/deliveries/31a164f845f8e27e/cg_ab_mix.wav in the next brief to close the recurrence chain.

Appendix: Provenance

Directive. Execute the Music-Gen v4 closure campaign; pursue milestones in strict order starting with M-V4-CERT-1 and M-V4-PROFILES-1; drive to a clean close.

Cycle range. cycles 72–74.

Audit verdict. VALIDATED with one caveat (Peach Dream stem manifest attribution gap; c65 first-act reproduce-and-attribute mandated). Zero CRITICAL, zero HIGH, zero MODERATE, zero MINOR.

Terminal deliverables landed this range.

- **§2 BANNED-list codification (Cycle 72).** Branch B chain-continue-supersede semantics named as distinct from re-escalation and wait-on-operator memo; both categories remain banned; Branch B is the correct pattern.
- **c62 Branch B on WIG piano stage-1 (Cycle 72).** Event 41558d83-0198-5b50-a1ed-be29cb057cc5 string-supersedes c61 escalation 69f293a9-....
- **Four non-CG guitar family-1 SKIP auto-closes (Cycle 73).** Disco A + Rome + Peach Dream + WIG each with c15 SF2_RULED_OUT + c47 OPT1 extension provenance.
- **P2 Option A docstring-only edit on tests/test_sound_match_fine_fit_sf2_other.py (Cycle 73).** SHA drift ee0c8a10... → 7ffd3389...; 8/8 PASS preserved.
- **c64 Branch B on WIG piano stage-1 (Cycle 74).** Event ad6e2798-1126-51bb-9cdd-c41c4df39be9 string-supersedes c62 Branch B 41558d83-....

- **P1/P2/P3 bass stage-2 SKIP cascade (Cycle 74).** Rome daedbdb9-4b92-5ce2-8f00-b6211cbea56d; Peach Dream a48e7483-82e0-55a5-b247-a3f99103d06a; Disco A 69f2e117-0692-530f-b1d6-45d4346c6eae. Each carries concrete next-cycle resume commands.
- **P4 non-CG guitar family-1 SKIP confirmation (Cycle 74).** Single event d10495ca-0958-507c-9fff-e27758ac5b93 confirming no operator lift request on the c63 auto-closes.
- **Housekeeping tail (Cycle 74).** Per c58 convention. Nine c64 ledger events total (five substantive + four housekeeping) exceeding \$3.9 $\geq$ 2-substantive minimum.

Three invariant-(d) SHA-drift disclosures at Cycle 74 close.

- tests/test_sound_match_fine_fit_sf2_other.py ee0c8a10... $\rightarrow$ 7ffd3389... (c63 P2 Option A docstring-only edit; validated).
- data/v4/regression/cg_ab_mix.wav brief-cited path absent; on-disk at data/v4/deliveries/31a164f845f8e27e/cg_ab_mix.wav c17 SHA 6e13e007... (brief-side transcription error under c62 carve-out).
- data/v4/profiles/88d247468cb6d49f/stem_manifest.json c4944ee80... $\rightarrow$ d483f2bf0b09389b... (concerning; c65 first-act reproduce-and-attribute mandated).

Six operator escalations remain formally closed on the substantive side. No _manager/* events opened this range. data/v4/_manager/ state untouched.

Read-only anchors held (12/12 verified byte-identical pre-vs-post at range close, except the three honestly-disclosed invariant-(d) divergences above).

Environment pin. Canonical 7-key env_pin_sha256=2ac444c36298d6ada0579aba1a9160a5881703a4e628f5ccdd828b842 stands from prior range; FD-16(a) re-issue not triggered. FD-16(c) replay proofs N/A (no renders launched this range).

Discipline guards asserted. OP-2 Monitor pre-registration at first tool call of each cycle sustained. Zero re-escalations of WIG piano stage-1 (Branch B chain-continue-supersede per c62 §2 BANNED-list). Zero wait-on-operator memos (banned per operator directive 2026-09-03 point 2). Zero preservation-spin sub-leaves (fifteen consecutive clean cycles since c48). All six c47 omnibus-closed operator-authority memos remain CLOSED. c14 string-supersedes_path lemma honored on all Branch B events. All AST-scannable invariants pass: no PRNG, no side-car_nonfactor, no VST3 state APIs, no --verify-det bypass, /usr/bin/python3 interpreter guard. No READ-ONLY anchor lift; c14 fine_fit_sf2_guitar.py %-in-help bug carve-out preserved. FD-1 halt-honest: zero fabricated fallbacks / tuning / retry-loops. FD-6 operator-ear-only-LANDS on non-CG respected. §5 nine-header closing-summary contract compliance at seventh consecutive cycle under c62 reminder-dropped policy.

Milestone status at range close.

- M-V4-CERT-1 — validated (E2E DETERMINISM HOLDS on the v3 spine).
- M-V4-PROFILES-1 CG (5/5 instruments) — validated.
- M-V4-PROFILES-1 non-CG drums — 4/4 SF2_CONFIRMED (CLOSED prior range).
- M-V4-PROFILES-1 non-CG vocals — SKIP auto-closed under FD-6 authority (prior range).
- M-V4-PROFILES-1 non-CG guitar family-1 — SKIP auto-closed under c15 + c47 OPT1 across all four focus songs (Cycle 73); c64 P4 confirmation of no operator lift.
- M-V4-PROFILES-1 non-CG guitar family-2 — queued per operator directive #5(c).
- M-V4-PROFILES-1 non-CG bass — Rome / Peach Dream / Disco A stage-2 sweeps SKIP-cascaded at Cycle 74 (disk-blocked at 85% > 82% precondition); concrete resume commands carried on SKIP rows.
- M-V4-PROFILES-1 non-CG piano — WIG piano stage-1 escalated to operator authority (c61); Branch B chain-continue-supersede across c62/c63/c64.
- M-V4-PROFILES-1 non-CG other — driver + policy landed (c61); stage-1 launch queued gated on disk pressure clearance.

- M-V4-SHOWCASE-1 CG — LANDS_pending_operator (cg_ab_mix.wav c17 SHA 6e13e007... byte-identical throughout).
- M-V4-SHOWCASE-1 non-CG — unblocked at policy level; A/B deliveries queued per operator directive #5(d).
- M-V4-RULES-1 — scaffold landed c20; substantive implementation queued.
- M-V4-EAR-1 — not yet opened.
- M-V4-GEN-1 — conditional on M-V4-RULES + M-V4-EAR; queued for fresh stall-budget-reset batch per operator directive #5(e).
- M-V4-CLOSE-1 — c24 amendment landed; completion report v3 queued per operator directive #5(f).

Next-cycle first tasks (per auditor forward guidance).

1. **PRIORITY: reproduce-and-attribute the Peach Dream stem manifest SHA drift** before any downstream Peach Dream event lands. `git log --all --follow --data/v4/profiles/88d247468cb6d49f/stem_manifest.json` first; if drift originates from c64 tooling, treat as anchor-mutation MODERATE; if pre-c64, retroactive invariant (d) disclosure closes it.
2. Reload OP-2 Monitor as first tool action of worker turn per c11+ policy.
3. If operator lands adjudication on any of the four c61 WIG-piano paths (OPT_A/B/C/D) via `live_guidance`, consume it — do NOT chain-continue Branch B mechanically past explicit operator input.
4. If disk clears to $\leq 82\%$ at c65 open, launch Rome bass stage-2 per §4 P1 with OP-1 SerialLock and c27 sweep hygiene.
5. If Branch B fires again at c65 (fourth consecutive), record it — do NOT re-escalate (per c62 §2 BANNED-list continues).
6. Continue §5 nine-header closing-summary reminder-dropped policy (eighth consecutive cycle at c65).

Operator ear remains LANDS authority post-hoc per FD-6.
