Music-Gen v4 — Cycles 60-62

Abstract

Cycles 60-62 completed the three-way sibling replication that the prior range’s provisional Rome bass acceptance needed to promote, formally cashed in the resulting trio to full SF2_CONFIRMED, and initiated the last remaining non-Chicken-Grease bass fine fit under an in-flight partial-advance close. Cycle 60 landed the Peach Dream bass profile v1 (song sha16 88d247468cb6d49f; top-1 GM5 EP2) as sibling #2 to the Rome provisional. Cycle 61 landed the Disco A bass profile v1 (song sha16 cdd2717e52820ff6; top-1 GM33 EBF) as sibling #3, completing three-way replication across three distinct SF2 program cells (Rome GM4 EP1, Peach Dream GM5 EP2, Disco A GM33 EBF); Cycle 61 also clarified the O-5 any-preset promotion criterion (three-way replication across three distinct program cells is sufficient regardless of preset diversity within the OPT1-extension acceptance policy) and flagged two operational observations (O-2 test-debt on tests 38+ pre-c47-omnibus SHA pins; O-4 filesystem-view lag between Bash ls/stat snapshots and background-task writes). Cycle 62 executed a partial-advance close: the trio promotion from SF2_CONFIRMED_provisional to SF2_CONFIRMED landed atomically across three files (data/v4/profiles/{51e433ade2a845e1,88d247468cb6d49f,cdd2717e52820ff6}/bass_family_verdict.json, mtimes clustered at 2026-09-05 13:59:00 UTC within four milliseconds) with a full promoted_from_verdict audit trail citing the c51 clarification of the any-preset criterion, the operator 2026-09-05 omnibus point 3, and the three-way sibling replication; the enum values are the canonical SF2_CONFIRMED post-c50 addendum with no drift; the c51 O-2 test-debt was discharged via the Path B skip-as-historical option authorized by the c52 brief (three_skip_historical guards at tests/test_c30_legacy_mode_regression.py:1638,1701,1771 covering test_38/test_39/test_40; test_15 remains updated to accept closed_by_operator; no Path A repin was attempted, which is correct because the c47 omnibus closure blocks make repin conceptually incoherent for pre-c47 SHA anchors); the P1 WIG bass stage-2 fine fit (song sha16 252eb21ce7df7328) authentically initiated with the OP-1 serial-lock engaged and produced seventeen mid-sweep render subdirectories under the prog005 gain/rev/postproc grid, df_guard_status.json and fetchability_ladder.jsonl on disk, but no landing artifacts (no updated bass.json, bass.replay_proof.json, or bass_family_verdict.json emission — the sweep

was mid-execution at cycle close). The c52 worker's own accessible-space reinterpretation of the disk-gate downgraded Priorities 2 and 3 (WIG drums stage-1 coarse; Disco A drums stage-1 coarse) to sequential rather than concurrent, leaving both drums-coarse launches for the next cycle; no drums artifacts on disk under either song profile directory. The c52 brief's docs-codification of the filesystem-view lag operational note (per c51 O-4) also deferred to the next cycle — a `grep -in "filesystem\monitor\snapshot" docs/agent_picks_selection_invariants.md` returns zero hits at close. Independent audit at range close returned **PARTIAL_ADVANCE — HOLDS on landed items, INCOMPLETE on P1/P2/P3/operational-note**. Zero CRITICAL, zero HIGH, zero MODERATE, four low-severity observations (O-1 serial-lock content anomaly with fresh mtime but stale content block citing an already-dead cycle-32 PID 24467; O-2 seventeen concurrent mid-sweep render subdirectories is on the high end of the c27 render→score→delete hygiene contract and warrants a residency-descent verification before landing; O-3 work_output/disk mismatch where the checkpoint narrative described only the WIG launch but the trio promotion and test skip-guards had actually landed six minutes earlier on disk; O-4 P2/P3 sequential-downgrade rationale under-specified without an accessible-space snapshot at decision time). None of the six previously-closed operator escalation memos were resurrected; data/v4/_manager/ state untouched. All bans held (preservation-spin, PRNG, sidecar_nonfactor, --verify-det, VST3 state). READ-ONLY anchors at scripts/sound_match/objective.py SHA 8087ce80... and scripts/sound_match/_sweep_hygiene_c27.py SHA 771ff42b... were not touched. env_pin_sha256=2ac444c3...a922ca canonical 7-key subset stands from prior range; FD-16(a) re-issue not triggered on P1 (which is in-flight, not landed).

Introduction

The Music-Gen v4 closure campaign is driving through seven strictly-ordered milestones toward a clean close. The prior range exited the fourteen-cycle preservation-only cadence under two arrived operator directives (a 2026-09-04 distance-semantics ruling formalizing `embedding_cos_vggish` as distance with 0.40 as a degenerate-floor upper bound, and a 2026-09-05 omnibus lifting SF2_CONFIRMED campaign-wide under an OPT1-extension best-of-search-across-families acceptance policy plus a seven-item punch list for the remainder of M-V4-PROFILES-1), and landed the first substantive post-c24 non-Chicken-Grease bass advance — the Rome bass profile v1 with verdict SF2_CONFIRMED_provisional pending sibling-cell replication.

Cycles 60-62 are the range in which the sibling replication actually happened and the trio promoted. The range also initiated the last remaining non-CG bass fine fit (WIG) and set up the drums-coarse work for the four non-CG songs. Two operational-hygiene observations from Cycle 61 (test-debt on pre-c47-omnibus SHA pins; filesystem-view lag between Bash snapshots and background-task writes) shaped Cycle 62's work; one landed via the pragmatic Path B option, the other deferred to the next cycle. The range closes on a partial-advance verdict with the WIG stage-2 sweep authentically in-flight and both drums-coarse launches queued for the next cycle.

Approach

Cycle 60 (Peach Dream bass — sibling #2). Executed the stage-2 fine fit for Peach Dream bass under the extended `fine_fit_sf2_v2.py` driver with OP-1 serial-lock engaged. Landed the pinned Peach Dream bass profile v1 with top-1 candidate GM5 EP2, verdict SF2_CONFIRMED_provisional, supersedes_path string → the c24 SF2 RULED_OUT verdict per the c14 lemma. Byte-determinism ×2 replay-proof REPLAY_PROOF_HOLDS. This is sibling #2 to the Rome provisional acceptance.

Cycle 61 (Disco A bass — sibling #3; any-preset criterion clarified; two observations). Executed the stage-2 fine fit for Disco A bass. Landed the Disco A bass profile v1 with top-

1 candidate GM33 EBF, verdict SF2_CONFIRMED_provisional. This completes three-way sibling replication across three distinct SF2 program cells (Rome GM4 EP1, Peach Dream GM5 EP2, Disco A GM33 EBF). Also clarified the O-5 any-preset promotion criterion: three-way replication across three distinct program cells is sufficient regardless of preset diversity within the OPT1-extension acceptance policy — the OPT1 extension’s best-of-search-across-families semantics do not require same-preset replication, only program-cell replication. Flagged two operational observations: O-2 test-debt on tests 38+ pre-c47-omnibus SHA pins that had been carried across earlier cycles; O-4 filesystem-view lag between Bash ls/stat snapshots and background-task writes (Bash reads the pre-write view; Monitor events reflect the post-write view, and the two can disagree during a long-running sweep).

Cycle 62 (partial-advance close). Nine-item work plan condensed into a First-Act mechanical batch plus three substantive priorities plus one docs codification. Executed:

- **First-Act O-1 (trio promotion, LANDED).** Atomically promoted all three non-CG bass verdicts from SF2_CONFIRMED_provisional to SF2_CONFIRMED across the three bass_family_verdict.json files. Mtimes clustered at 2026-09-05 13:59:00 UTC within four milliseconds — evidence of a single atomic promotion pass. Full promoted_from_verdict audit trail on each file citing the c51 clarification of the any-preset criterion, the operator 2026-09-05 omnibus point 3, and the three-way sibling replication (Rome c49 GM4 EP1, Peach Dream c50 GM5 EP2, Disco A c51 GM33 EBF). Enum values are the canonical SF2_CONFIRMED post-c50 addendum — no drift.
- **First-Act O-2 (tests 38+ skip-guard, LANDED via Path B).** The c52 brief authorized either Path A (attempt to repin against post-c47-omnibus SHAs) or Path B (skip-as-historical). Worker chose Path B: three _skip_historical guards landed at tests/test_c30_legacy_mode_regression.py:1638,1701,1771 covering test_38, test_39, test_40. test_15 remains updated to accept closed_by_operator. No repin was attempted — this is the correct choice because the c47 omnibus closure blocks make repin conceptually incoherent for pre-c47 SHA anchors.
- **P1 WIG bass stage-2 fine fit (IN-FLIGHT).** Launched under OP-1 serial-lock engagement on song sha16 252eb21ce7df7328. At cycle close, data/v4/profiles/252eb21ce7df7328/bass_sweep_stage2/ contains df_guard_status.json (mtime 14:05:02), fetchability_ladder.jsonl (single line — pyloudnorm module-availability record), and renders/ with 17 candidate subdirectories in the prog005 gain/rev/postproc grid. Consistent with a fresh stage-2 launch mid-execution. No landing artifacts: no updated bass.json, no bass.replay_proof.json refresh, no bass_family_verdict.json emission.
- **P2 WIG drums coarse (NOT LAUNCHED).** Worker’s stated rationale was accessible-space reinterpretation of the disk-gate — downgraded from concurrent to sequential (wait for P1 to complete before launching P2/P3). No drums artifacts on disk under 252eb21ce7df7328/.
- **P3 Disco A drums coarse (NOT LAUNCHED).** Same sequential-downgrade posture. No drums artifacts on disk under cdd2717e52820ff6/.
- **Filesystem-view lag operational-note codification (NOT LANDED).** grep -in "filesystem\|monitor\|snapshot" docs/agent_picks_selection_invariants.md returns zero hits. The c51 O-4 observation remains uncoded.

Discipline guards asserted across the range. No SF2_CONFIRMED emission outside the OPT1-extension acceptance policy. All AST-scannable invariants pass: no PRNG, no sidecar_nonfactor, no VST3 state APIs, no --verify-det bypass, /usr/bin/python3 interpreter guard. supersedes_path typed as string per c14 lemma on the Peach Dream and Disco A profiles (never list) and on the Rome/Peach Dream/Disco A verdict promotions. OP-1 serial-lock engaged on each stage-2 fine-fit invocation. No wait-on-operator memo (banned per operator directive 2026-09-03 point 2). None of the six previously-closed operator escalation memos resurrected

— data/v4/_manager/ state untouched. Preservation-spin remains formally retired per the operator 2026-09-05 omnibus point 4; no per-cycle preservation sidecars emitted. FD-1 honored on all landed items: no tuning, no retry, no fallback observed in the stage-2 fine fits.

Findings

Three-way sibling replication completed; trio promoted atomically

Rome (c49), Peach Dream (c50), Disco A (c51) all landed under OPT1-extension acceptance with SF2_CONFIRMED_provisional verdicts. Cycle 62 promoted the trio atomically to full SF2_CONFIRMED:

- Rome (data/v4/profiles/51e433ade2a845e1/bass_family_verdict.json): verdict = SF2_CONFIRMED; promoted_from_verdict = SF2_CONFIRMED_provisional.
- Peach Dream (data/v4/profiles/88d247468cb6d49f/bass_family_verdict.json): verdict = SF2_CONFIRMED; promoted_from_verdict = SF2_CONFIRMED_provisional.
- Disco A (data/v4/profiles/cdd2717e52820ff6/bass_family_verdict.json): verdict = SF2_CONFIRMED; promoted_from_verdict = SF2_CONFIRMED_provisional.

Mtimes cluster at 2026-09-05 13:59:00 UTC within four milliseconds — evidence of a single atomic promotion pass. Each file's promotion_authority string cites the c51 clarification of the O-5 any-preset criterion, the operator 2026-09-05 omnibus point 3, and the three-way sibling replication (Rome c49 GM4 EP1, Peach Dream c50 GM5 EP2, Disco A c51 GM33 EBF). Enum values are the canonical SF2_CONFIRMED post-c50 addendum with no drift.

Test-debt discharged via Path B (skip-as-historical) on tests 38+

The c51 O-2 observation flagged tests 38+ carrying pre-c47-omnibus SHA pins that could not be reconciled against post-omnibus reality without either repinning to new SHAs or explicitly deferring. The c52 brief authorized both Paths A and B. Worker chose Path B: three _skip_historical guards landed at tests/test_c30_legacy_mode_regression.py:1638,1701,1771 covering test_38, test_39, test_40. test_15 remains updated to accept closed_by_operator (line 401). No Path A repin was attempted — this is the correct choice because the c47 omnibus closure blocks make repin conceptually incoherent for pre-c47 SHA anchors: the anchors' semantic meaning changed under the closure, not just their values.

WIG bass stage-2 authentically in-flight; no landing yet

Launched under OP-1 serial-lock on song sha16 252eb21ce7df7328. On-disk state at cycle close:

- data/v4/profiles/252eb21ce7df7328/bass_sweep_stage2/df_guard_status.json — mtime 14:05:02 UTC.
- data/v4/profiles/252eb21ce7df7328/bass_sweep_stage2/fetchability_ladder.jsonl — 1 line (pyloudnorm module-availability record).
- data/v4/profiles/252eb21ce7df7328/bass_sweep_stage2/renders/ — 17 candidate subdirectories in the prog005 gain/rev/postproc grid.

Consistent with a fresh stage-2 launch mid-execution. No landing artifacts: no updated bass.json, no bass.replay_proof.json refresh, no bass_family_verdict.json emission. **P1 remains open for the next cycle.**

P2/P3 drums-coarse launches deferred to next cycle

No drums* files under data/v4/profiles/252eb21ce7df7328/ (WIG) or data/v4/profiles/cdd2717e52820ff6/ (Disco A). Worker's stated rationale for the sequential downgrade of P2/P3 was accessible-space reinterpretation of the disk-gate — wait for P1 to complete before launching P2/P3. Internally coherent posture, but the campaign-forward implication is that drums stage-1 debt now carries into the next cycle for both songs.

Filesystem-view lag operational note not codified

The c52 brief called for docs-codification of the c51 O-4 observation (Bash `ls/stat` view lags background-task writes; trust Monitor events). `grep -in "filesystem\|monitor\|snapshot" docs/agent_picks_selection_invariants.md` returns zero hits at range close. Mechanical docs item; did not land.

Six operator escalations remain formally closed on the substantive side

None of the six previously-closed operator escalation memos were resurrected this range. data/v4/_manager/ state untouched. All six (composite-FP-drift, non-CG bass acceptance policy, metric-semantics, drums-fine, v2-bass-fine, guitar-fine) remain substantively closed by the c47 omnibus and the c46 distance-semantics ruling.

Read-only anchors held; bans held

READ-ONLY anchors uninvolved this range: scripts/sound_match/objective.py SHA 8087ce80...; scripts/sound_match/_sweep_hygiene_c27.py SHA 771ff42b.... No edits attested; c51 anchors stand. All discipline bans held: preservation-spin (formally retired), PRNG, sidcar_nonfactor, --verify-det, VST3 state. env_pin_sha256=2ac444c3...a922ca canonical 7-key subset stands from prior range (not re-derived this cycle because P1 remains in-flight rather than landed).

Audit outcome

PARTIAL_ADVANCE — HOLDS on landed items, INCOMPLETE on P1/P2/P3/operational-note. Zero CRITICAL, zero HIGH, zero MODERATE. Four low-severity observations queued for the next cycle:

- **O-1: Serial-lock content anomaly.** data/v4/_run/fine_fit_serial_lock mtime = 2026-09-05 14:05:02 UTC (fresh) but content reads {"cycle":32,"driver":"fine_fit_sf2_v2","pid":24467,"started_at":"2025-08-29T10:30:24+00:00"}. PID 24467 is DEAD (/proc/24467 absent). Reading: the fresh writer either rewrote a stale content block without updating cycle/pid/started_at fields (helper bug in scripts/sound_match/_serial_lock_op1.py write-path) or the P1 launch is trailing a still-running earlier stage-2 process whose PID has since exited and the file mtime bump came from a re-touch rather than a re-acquire. Non-blocking because P1 landing has not been claimed yet — no downstream artifact currently depends on a mis-attested lock. Next-cycle look at the write-path is warranted before trusting the P1 emission.
- **O-2: Mid-sweep render residency count (17) is on the high end of the c27 render→score→delete hygiene contract.** Not currently a violation — the batch-render-full-grid BAN concerns pre-declaring the full grid, not transient residency — but the residency curve should descend before landing, not just at landing. Next-cycle verification during the P1 completion check.

- **O-3: Work_output/disk mismatch (auditor-scope observation).** The c52 worker’s reported checkpoint describes only the WIG launch, but two First-Act items (trio promotion, test skip-guards) landed on disk at 13:59:00 — six minutes before the sweep launch. Likely an artifact of the summary compaction shape rather than the worker withholding evidence; the promotion audit trail is fully self-attesting on disk and the tests skip-guard is discoverable by grep. Flagged so future audits know to prefer disk-of-record over the checkpoint narrative when they disagree.
- **O-4: P2/P3 sequential-downgrade rationale under-specified.** Whether accessible-space at launch time truly forbade concurrent drums-coarse alongside a fine-fit stage-2 is not evidenced in the c52 work_output. If the sequential-downgrade posture persists in the next cycle, an accessible-space snapshot (df -h) at decision time should accompany the rationale.

Discussion

Three things about this range are worth naming.

First, the range demonstrates that a provisional acceptance under a fresh operator authorization can promote cleanly once its stated criterion is met. The c47 omnibus authorized OPT1-extension acceptance but left the sibling-replication criterion implicit; c49 landed Rome bass provisionally with an honest SF2_CONFIRMED_provisional label; c50 clarified the label’s semantics in the invariants doc; c51 clarified the promotion criterion (any-preset three-way replication is sufficient); Cycles 60 and 61 landed siblings #2 and #3 with distinct programs; Cycle 62 promoted the trio atomically with a full audit trail citing every intermediate authorization. Nothing was retro-relabeled. Every intermediate cycle’s discipline held. The atomic promotion (three files, four-millisecond mtime cluster) is auditable evidence that the promotion happened as a single act rather than a rolling series of individual re-classifications. This is the intended shape of the provisional-to-confirmed pipeline under a fresh operator authorization: honest labeling at first landing, criterion formalization in the invariants doc, sibling accumulation across intermediate cycles, atomic promotion when the criterion is met.

Second, the range demonstrates the correct handling of test-debt when the underlying anchors’ semantics change under an operator-authority decision. The c52 brief authorized both Path A (repin against post-c47-omnibus SHAs) and Path B (skip-as-historical), giving the worker a real judgment call. The worker chose Path B, and the audit endorsed the choice: the c47 omnibus closure blocks make repin conceptually incoherent for pre-c47 SHA anchors because the anchors’ semantic meaning changed under the closure, not just their values. Path A would have produced tests that appear green but are testing a fiction (the post-closure repin values do not have the same relationship to the pre-closure invariant that the original pins encoded). Path B (skip-as-historical) surfaces the historical nature of the pins honestly — the tests are preserved as historical record but not run as live regression against a post-closure state. This is the correct discipline pattern when operator-authority changes rewrite the semantic ground under prior regression pins: preserve the historical record honestly rather than pretending the pins still test what they used to test.

Third, the partial-advance close pattern is worth naming as a discipline shape rather than as a failure mode. The range close is honest that P1 is in-flight not landed, that P2 and P3 are queued not started, and that the docs codification did not land. None of these are attempts to claim substantive advance that did not occur; each is a specific, discoverable, disk-of-record state that the next cycle can pick up. The audit’s characterization — “HOLDS on landed items, INCOMPLETE on P1/P2/P3/operational-note” — captures the shape precisely. A partial-advance close is not a failed cycle; it is a cycle that ended with substantive work in a well-defined intermediate state. The next cycle’s tasks are enumerated: complete the

P1 landing (with the O-1 lock-content check first), launch P2 and P3 with a proper `df -h` snapshot if the sequential downgrade persists, and codify the filesystem-view lag note in the invariants doc. Each is one-line-of-instruction actionable. The alternative — either rushing P1 to a landing that has not actually completed, or claiming P2/P3 attempts that in fact did not launch — would be substantively worse.

Open questions

- **WIG bass stage-2 P1 completion.** In-flight at close with 17 mid-sweep render sub-directories under the prog005 grid; no landing artifacts. Next-cycle first task: verify sweep completion via Monitor (not `ls`) per the c51 O-4 observation, address the O-1 lock-content anomaly on `scripts/sound_match/_serial_lock_op1.py` write-path before trusting the P1 emission, then land the standard triple (`bass.json + bass_family_verdict.json + bass.replay_proof.json`).
- **Serial-lock content anomaly (O-1).** `data/v4/_run/fine_fit_serial_lock` shows fresh mtime with stale content block citing cycle 32, PID 24467 (dead). Either the helper's write-path has a bug that rewrites the file without updating cycle/pid/started_at fields, or the fresh mtime came from a re-touch rather than a re-acquire. Next-cycle look at the writer before trusting downstream emissions that depend on lock attestation.
- **Mid-sweep render residency (O-2).** 17 concurrent render subdirectories mid-sweep is on the high end of the c27 render→score→delete hygiene contract. Verify the residency curve descends before landing, not just at landing. If deletion is not happening per-candidate as the contract specifies, the c50/c52 auditor's earlier O-2 observation (sweep-hygiene per-candidate-delete contract clarity in `fine_fit_sf2_v2.py`) becomes actively-blocking rather than informational.
- **P2 WIG drums stage-1 coarse launch.** Not started this range. Next-cycle launch; if sequential downgrade repeats, accompany with an accessible-space snapshot (`df -h`) at decision time per O-4.
- **P3 Disco A drums stage-1 coarse launch.** Same posture as P2.
- **Filesystem-view lag operational-note codification.** Not landed this range. One-line addition to `docs/agent_picks_selection_invariants.md` (or a suitable operational-notes section) codifying the c51 O-4 observation that Bash `ls/stat` snapshots lag background-task writes and Monitor events should be trusted for background-task status. Mechanical.
- **P2/P3 sequential-downgrade rationale (O-4).** Under-specified without a `df -h` accessible-space snapshot at decision time. If the sequential-downgrade posture persists in the next cycle, the snapshot should accompany the rationale.
- **Remaining M-V4-PROFILES-1 punch-list per operator omnibus 5(a)-(g).** After trio promotion, three of four non-CG bass cells are SF2_CONFIRMED; WIG bass in-flight. Non-CG drums 0/4. Non-CG guitar 0/2 substantive (WIG + Peach Dream guitar are NULL by earlier MIDI-probe). Piano/other/vocals stems queued. A/B deliveries per song queued. Generator batch queued. Completion report v3 queued.
- **M-V4-EAR-1 / M-V4-RULES-1 / M-V4-GEN-1 / M-V4-CLOSE-1 status.** Unchanged this range.

Appendix: Provenance

Directive. Execute the Music-Gen v4 closure campaign; pursue milestones in strict order starting with M-V4-CERT-1 and M-V4-PROFILES-1; drive to a clean close.

Cycle range. cycles 60–62.

Audit verdict. PARTIAL_ADVANCE — HOLDS on landed items, INCOMPLETE on P1/P2/P3/operational-note. Zero CRITICAL, zero HIGH, zero MODERATE. Four low-severity observations (O-1 serial-lock content anomaly; O-2 mid-sweep render residency high; O-3 work_output/disk mismatch; O-4 P2/P3 sequential-downgrade rationale under-specified).

Terminal deliverables landed this range.

- Peach Dream bass profile v1 (song sha16 88d247468cb6d49f; top-1 GM5 EP2; verdict SF2_CONFIRMED_provisional; byte-determinism ×2 replay-proof REPLAY_PROOF_HOLDS) — sibling #2 (Cycle 60).
- Disco A bass profile v1 (song sha16 cdd2717e52820ff6; top-1 GM33 EBF; verdict SF2_CONFIRMED_provisional; byte-determinism ×2 replay-proof REPLAY_PROOF_HOLDS) — sibling #3 (Cycle 61).
- O-5 any-preset promotion criterion clarification: three-way replication across three distinct program cells is sufficient regardless of preset diversity within the OPT1-extension acceptance policy (Cycle 61).
- Trio atomic promotion SF2_CONFIRMED_provisional → SF2_CONFIRMED across Rome / Peach Dream / Disco A bass_family_verdict.json; mtimes clustered at 2026-09-05 13:59:00 UTC within four milliseconds; full promoted_from_verdict audit trail citing c51 O-5 clarification + operator 2026-09-05 omnibus point 3 + three-way sibling replication (Cycle 62).
- Path B skip-as-historical guards at tests/test_c30_legacy_mode_regression.py:1638,1701,1771 covering test_38 / test_39 / test_40; test_15 remains updated to accept closed_by_operator (Cycle 62).
- WIG bass stage-2 fine-fit initiation under OP-1 serial-lock on song sha16 252eb21ce7df7328; 17 mid-sweep render subdirectories in prog005 gain/rev/postproc grid; df_guard_status.json + fetchability_ladder.jsonl on disk; no landing artifacts (Cycle 62).

Six operator escalations remain formally closed on the substantive side. data/v4/_manager/ state untouched throughout the range.

Read-only anchors uninvolved this range.

Environment pin. Canonical 7-key env_pin_sha256=2ac444c36298d6ada0579aba1a9160a5881703a4e628f5ccdd828b842 stands from prior range; not re-derived this range (no env-touching mutations on landed First-Act items; P1 in-flight not landed). FD-16(a) re-issue not triggered.

Discipline guards asserted (AST-scannable). No PRNG imports, no sidecar_nonfactor, no VST3 state APIs, no --verify-det bypass, /usr/bin/python3 interpreter guard. supersedes_path typed as string per c14 lemma on all Peach Dream, Disco A, and trio-promotion emissions (never list). OP-1 serial-lock engaged on each stage-2 fine-fit invocation (with O-1 content-anomaly caveat on Cycle 62 launch). No wait-on-operator memo (banned per operator 2026-09-03 point 2). Preservation-spin remains formally retired per operator 2026-09-05 omnibus point 4; no per-cycle preservation sidecars emitted. FD-1 honored on all landed items.

Milestone status at range close.

- M-V4-CERT-1 — validated (E2E_DETERMINISM_HOLDS on the v3 spine; env_pin stands from prior range).
- M-V4-PROFILES-1 CG (5/5 instruments) — validated (unchanged).
- M-V4-PROFILES-1 non-CG bass — Rome SF2_CONFIRMED; Peach Dream SF2_CONFIRMED; Disco A SF2_CONFIRMED; WIG stage-2 in-flight at close, no verdict emission yet.
- M-V4-PROFILES-1 non-CG drums — 0/4 (P2 WIG + P3 Disco A queued for next cycle; sequential-downgrade rationale to be evidenced with df -h snapshot if repeated).
- M-V4-PROFILES-1 non-CG guitar — 0/2 substantive (WIG + Peach Dream guitar NULL by MIDI-probe; Rome + Disco A guitar queued per punch-list).
- M-V4-PROFILES-1 piano / other / vocals stems — queued per operator punch list.
- M-V4-SHOWCASE-1 CG — LANDS_pending_operator (cg_ab_mix.wav byte-identical since c17).
- M-V4-SHOWCASE-1 non-CG — unblocked at policy level by operator omnibus; A/B deliveries queued per punch-list.
- M-V4-RULES-1 — scaffold landed c20; substantive implementation queued.
- M-V4-EAR-1 — not yet opened.
- M-V4-GEN-1 — conditional on M-V4-RULES + M-V4-EAR.
- M-V4-CLOSE-1 — c24 amendment landed; completion report v3 queued per operator punch list.

Next-cycle first tasks (from auditor advice). (a) P1 WIG stage-2 completion check via Monitor (not ls) and landing emission. (b) OP-1 sentinel content-integrity check on scripts/sound_match/_serial_lock_op1.py writer to resolve O-1 anomaly before trusting the P1 emission. (c) Drums stage-1 coarse for WIG + Disco A (sequential unless a numerical df -h justification supports concurrency per O-4). (d) Codify the filesystem-view lag operational note in docs/agent_picks_selection_invariants.md per c51 O-4 / c52 brief. Trio-promotion and tests-skip-guard items are DONE; do not redo. Operator ear remains LANDS authority post-hoc per FD-6.
