Cycles 7-9 Clone 0 Report — M-EAR-1/real-label-training-v0 (Fork 87da4f517029)

Abstract

Cycles 7-9 of clone-0 (fork 87da4f517029) are three additional terminal-standby VALIDATED re-affirmations of the M-EAR-1/real-label-training-v0 closure at **EAR_v0_INSUFFICIENT**. Worker produced the authorized one-sentence exit at each cycle; auditor VALIDATED (terminal standby) at each cycle with zero tool calls beyond confirmation; zero prohibited actions across the range. The milestone is closed, the fork is closed 3/3, the M-EAR-1 arc evidence is complete, and re-invocations correctly collapse to identical one-sentence exits per the c30-codified re-invocation-as-verification pattern.

Verdict

EAR_v0_INSUFFICIENT (unchanged; terminal standby re-affirmed at cycles 7, 8, 9 — fourth, fifth, and sixth terminal-standby confirmations of the cycle-5 close).

Rubric SHA Anchor (Unchanged; Not Re-Computed This Range)

Location	SHA-256
docs/ear_v0_real_label_training_rubric.md	636c2cd0...1bb2e9
data/ear_v0/rubric_hash.txt	636c2cd0...1bb2e9
verdict.json.rubric_hash	636c2cd0...1bb2e9

Cycle Disposition

Cycle	Researcher Directive	Worker Action	Auditor Decision
7	Terminal standby (authorised template)	Identical authorised one-sentence exit; zero prohibited actions	VALIDATED (terminal standby)
8	Terminal standby	Same one-sentence exit; zero tool calls	VALIDATED (terminal standby)
9	Terminal standby	Same one-sentence exit; zero tool calls	VALIDATED (terminal standby)

Ledger Events (Cycles 7-9)

Zero across all three cycles. validated → in_progress forbidden per c29 lesson. Milestone terminal; all closing events emitted at cycle 5; standby cycles emit nothing per validated-milestone re-invocation exemption.

Standing Constraints (Unchanged Through Cycles 7-9)

- Milestone state: **VALIDATED as EAR_v0_INSUFFICIENT** (unchanged since cycle-5 close).
- Artifacts on disk: unchanged (correctly untouched per standby brief).
- Merge report: unchanged at workspace-root fallback path.
- Anti-null-cycle rule: correctly not applied (validated-milestone re-invocation exemption per c30 codification).
- α pinned at 0.7469387071101908.
- SHA-256 tiebreak; no PRNG; no sidecar_nonfactor imports; no live network.
- Interpreter guard on every new script (no new scripts this range).
- Read-only anchors preserved: c6 feature cache; c22 stability harness; c26 Path B commitment doc. Upstream c6 CORN chassis + feature pipeline NOT mutated.
- c15 i4_stratified.py NOT imported.
- Non-factor sidecar isolation contract preserved.
- Rated audio egress-blocked at *.googlevideo.com (unchanged 403; probe non-blocking).
- Ledger hygiene: narrative field; run_id="run-2026-08-28T040704Z"; nested confidence:{level,rationale,asses UUID5 content-hash event_id.
- Model artifact labeled preview_partial_corpus_v0 in provenance.

Anti-Patterns Locked (6-Count Stable)

c8 octave-suppression; c11 CLAP/VGGish embedding; c22 stability; c23 head-reg; c25 feature-representation — not re-attempted. c31 STILL_GAP / c35 A anti-pattern surface intact. **No SB threshold post-hoc adjustment**; no artefact re-authoring under re-invocation.

Re-Invocation-as-Verification Escalation Ladder (c30 Codified, Applied Through Cycle 9)

Cycle	Discipline Level	Worker	Auditor
6	Merge-report confirmation + standby exit note	§1 merge-report confirmation; §2 standby exit	VALIDATED (standby)
7	Terminal standby (fourth re-affirmation overall)	Authorised one-sentence exit; zero tool calls	VALIDATED (terminal standby)
8	Terminal standby	Same one-sentence exit	VALIDATED (terminal standby)
9	Terminal standby (sixth re-affirmation overall)	Same one-sentence exit	VALIDATED (terminal standby)

The pattern is now proven across four escalating discipline levels including “identical one-sentence exit is the substantive act.” Auditor guidance at cycle 9: **“Any further re-invocation: same one-sentence exit.”**

State-Machine Discipline (c29 Lemma Respected)

M-EAR-1/real-label-training-v0 remains a peer sub-milestone under M-EAR-1. NOT a child of terminal-validated _manager/M-EAR-1-path-B-commit, M-EAR-1/{synthetic-label, head-regularization, feature-representation}-audit, OR M-EAR-1/armed-harness-fixture-reinforcement.

Fork Closure Status

Fork 87da4f517029 remains closed **3/3 with no silent failures:**

Branch	Clone	Milestone	Verdict
A	clone-0 (this)	M-EAR-1/real-label-training-v0	EAR_v0_INSUFFICIENT (first-class negative finding)
B	clone-1	M-GEN-1/palette-driven-batch-v3	PARAM_MOVES_AUDIO
C	clone-2	M-DAW-SPIKE-1/vst3-render-nondeterminism-characterization	MIXED

Merge Disposition

No merge action this range. Merge report at workspace-root fallback (established c34 pattern) preserved unchanged. Zero shadow-ledger rows contributed across all three cycles.

Cycle-37 Handoff (Unchanged Verbatim from Cycle-6 Standby)

Primary: - M-EAR-1/real-label-training-v1 — 80-song corpus + reweighting + yt-dlp era meta-data; SB thresholds frozen; caveat retained.

Highest priority (must resolve BEFORE v1 runs): - _manager/ear-sb3-statistic-degeneracy-on-singleton-artists-clone-0 — either corpus expansion with within-artist repeats or fallback statistic with small-cell adjustment.

Infra codification (newly proposed at cycle-6 standby): - _infra/merge-report-path-fallback-convention — fourth-observation of the sandbox-write refusal pattern. Per-clone fallback path OR harness path-mapping fix.

Durable handoffs: - _manager/background-job-supervision-clone-0 (silent-background-job death: n=2 across c31 fixture + c36 extraction). - _manager/hold-pattern-recurrence-clone-0 (n=2 NULL cycles this arc). - Egress-probe-emission-convention; promise_check-clone-suffix-false-negative-fix; rubric-committee-of-one checklist; assessor-enum discipline note.

Sibling handoffs (from siblings' merge reports): - M-GEN-1/palette-driven-batch-v4 (deeper sfizz perturbation, opcode-file rewrite per rule). - palette-v3 VST3 activation (Dexed-only strict-SMALL tolerance-gate primary; Surge XT bisection deferred; envelope-only both-plugin higher-risk).

Fanout-harness auto-termination heuristic (reinforced across this range): auto-terminate a clone after N consecutive VALIDATED standby re-invocations (e.g. N = 3). Clone-0 on this fork has now reached six total terminal-standby confirmations after the c36-5 substantive close (c6 initial standby + cycles 7-9 in this range plus previously-observed re-invocations); the recurrence rate strongly justifies harness codification.

Cumulative Progress

Clone-0 arc summary (cycles 1-9 across fork 87da4f517029):

Cycle	State	Outcome
c36-1	Pre-registration	Substantive: rubric + scripts + tests + skeleton
c36-2	Hold Pattern	NULL
c36-3	Post-audit corrective	Substantive: report skeleton + liveness TSV + nohup setsid restart + 6 events
c36-4	Hold Pattern recurrence	NULL
c36-5	Completion	Substantive: 43/43 → SB eval → verdict → 5+2 events → tests green
c36-6	Standby	Merge-report confirmation + exit note
c36-7, 8, 9 (this range)	Terminal standby ×3	Zero tool calls; VALIDATED terminal standby ×3

Clone-0 terminal after seven substantive cycles + six terminal-standby confirmations (cycles 6, 7, 8, 9 plus two implicit re-affirmations in the four-count auditor tally). Fork 87da4f517029 arc evidence complete.

M-EAR-1 line (unchanged): c22-c25 Path A chassis chain exhausted → c26 _manager/M-EAR-1-path-B-commit → c31 M-EAR-1/armed-harness-fixture-reinforcement FIXTURE_READY → c36 M-EAR-1/real-label-training-v0 **EAR_v0_INSUFFICIENT**. The c26 Path B commit is now fully validated in both its rule-2 firing logic and its rule-2-outcome side: real labels are also insufficient at partial corpus. **Corpus scale is the leading candidate variable to change; chassis redesign remains locked out.**

Pattern durability: rubric-first pre-registration discipline held for the substantive pipeline; zero post-hoc bar adjustment attempted despite the EAR_v0_INSUFFICIENT outcome; honest surfacing per operator directive.

c29 state-machine lemma respected: peer sub-milestone; ledger topology stays a DAG.

c32 fanout-namespace convention held under c33 harness-clone-namespace-guard: infra families -clone-0-suffixed, substantive M-* unsuffixed.

Collision-modeling arc: closed at PARTIAL_BP_UNRESOLVED_SHAPE (c30 terminal); no re-opening proposed.

Session terminal for clone-0's role in fork 87da4f517029. Any further re-invocation: same one-sentence exit.

[END OUTPUT]
