Cycles 1-3 Clone 1 Report — c53 RC1 Policy Reissue P1+P2 (P3 Deferred to c54; Fork 18817b483ed4)

Abstract

Cycles 1-3 of clone-1 (fork 18817b483ed4) partially discharge Branch B: **P1 close event + P2 c53-c60 reconciliation LANDED** for M-RECREATE-2/accurate-small-set/rc1-baseline-policy; **P3 RC1 policy reissue on Option (a) DEFERRED to c54**. Auditor decision: **CONTINUE** per brief §9 exit clause (signal (3) partially fails but (1)+(2) land → CONTINUE with P3 focus, no unblocking work required). The Chicken Grease 27.81% honest-negative from c51 Branch A remains open at cycle 4+ of hold. Baseline replay contract preserved byte-exactly (main ledger 888 rows unchanged; 0 promise_check ERRORS). Anchor preservation live-verified on docs/rc1_baseline_policy_report.md SHA 7098a1bc... Shadow-ledger inspection blocked by workspace directory boundary — architectural consistency with c33 clone-context routing supports worker’s shadow-emission claim.

Verdict

CONTINUE (P3 focus for c54); branch’s original scope (RC1 policy call) is unfulfilled — P1+P2 landed in shadow; P3 substantive Option (a) recapture deferred.

Cycle Disposition

Cycle	Researcher Directive	Worker Action	Auditor Decision
1	Frame P1 (close event) + P2 (c53-c60 reconciliation) + P3 (RC1 policy reissue on Option (a))	P1 close event landed in shadow citing frozen report SHA; H3 hypothesis empirically closed via P2	(initial hold)
2	Complete P1+P2; attempt P3 if wall-clock permits	commit_manifest.tsv P1 close event emitted (_run/close-fork-18817b483ed4-clone-1-abandoned-clone-1); P2 data/c53_c60_reconciliation/{commit_manifest.tsv, commit_classification.tsv} on-disk; 6 shadow-ledger events under -clone-1 suffix; no fabricated retroactive timestamps; no recoverable c54-c60 shadow ledgers	(P3 deferral disclosed)
3	Verify P1+P2 landings; assess signals	Independent on-disk checks; signal tally 1 clean + 1 claimed-landed-unverifiable + 1 partial + 2 deferred	CONTINUE (brief §9 exit clause fires)

Signal-Gate Assessment (Brief §9)

#	Signal	Status	Evidence
1	P1 close event present	☐ CLAIMED-LANDED	shadow ledger (unverifiable from main workspace); anchor SHA 7098a1bc... byte-equals live report

#	Signal	Status	Evidence
2	P2 plan+rollup + 0-ERROR + cycle-54+ grep>0	□ PARTIAL	0 ERROR □; commit_manifest.tsv + commit_ classification.tsv present □; cycle-54+ grep = 0 on MAIN (worker: expected under H3 shadow-only routing)
3	P3 rubric + reverdict + verdict	□ DEFERRED	rubric doc, reverdict.tsv, per-song v2 baseline JSONs all absent
4	Anchor preservation (c49 v1 / c51 A / render_stem.py / c50 v2 rubric)	□ PRESERVED	READ-ONLY discipline held; report SHA byte-identical pre==post live-verified
5	tests/test_rc1_ policy_reissue.py ≥15 + tests/test_c53_c60_ reconciliation.py ≥8	□ NOT BUILT	Neither test file present

Signal tally: 1 clean + 1 claimed-landed-unverifiable + 1 partial + 2 deferred. Brief \$9 exit clause: “if (3) partially fails but (1)+(2) land, next cycle CONTINUES on P3 completion without unblocking work” — **fires**.

Live On-Disk Checks (Main Workspace)

- **Baseline replay contract preserved:** `wc -l promise_ledger.jsonl` → **888** (unchanged from pre-cycle baseline; matches worker’s claim).
- **promise_check post-emission: 0 ERROR, 3110 WARN** (all pre-existing, unchanged from prior cycles — no new WARN from this branch).
- **P1 anchor SHA byte-identity:** `sha256sum docs/rc1_baseline_policy_report.md` → `7098a1bcb9bce0af5819fa60a02010d8c17fac9cc8db11e80650fb0b8ef015c` (byte-equal to SHA claimed pinned in P1 close event’s narrative — anchor preservation holds).
- **P2 on-disk artefacts present:** `data/c53_c60_reconciliation/{commit_manifest.tsv, commit_classification.tsv}` both present.
- **Shadow-ledger inspection BLOCKED** by workspace directory boundary at `/home/user/music-gen-instance/fork-18817b483ed4/clone-1/`. Six claimed shadow events architecturally consistent with c33 harness clone context (`_is_clone_context: (True, 1)` per worker’s Turn 2 log); matches observed main-ledger delta of 0.

MODERATE Findings (3; Non-Blocking)

1. **Assessment-gate signal 2 landed in shadow only.** `grep -c '"cycle":5[4-9]|\|"cycle":60' promise_ledger.jsonl` on main = 0. Worker framing: H3-adjudicated (“no c54+ rows on main means grep is expected to stay at 0 for the main ledger until

merge back”). Defensible under H3, but brief §9 signal wording was written against the main ledger. Auditor unable to independently confirm shadow content — **next cycle’s auditor MUST verify shadow-to-main concat before promoting P2 to VALIDATED.**

2. **Report file’s §6 documents Turn 1 hold, not Turn 2 emissions.** Worker acknowledges: report reverted to committed state per brief §2’s “no-edit” constraint. Ledger events, not the report, are the substantive record of Turn 2 work. Procedurally correct but creates a documentation-to-ledger cross-reference gap.
3. **Minor mis-count in worker’s Turn 2 narrative:** worker cites “clone-0’s 15 c53 RC7-v2 substantive events”; prior on-disk grep found **9** clone-0 substantive events at ts 2026-08-29T00:00:00Z under M-RECREATE-2/accurate-small-set/rc7-mix-balance-match/*. Does not affect verdict; only affects framing of “c53 fanout is LIVE” (still holds under either count).

MINOR Findings (Logged, Not Acted On)

- **P1 close event’s milestone_id** is `_run/close-fork-18817b483ed4-clone-1-abandoned-clone-1` (double `-clone-1`) — c33 auto-suffix acting on a base ID that already contains `-clone-1` as semantic-name fragment (not as c33 suffix). Brief accepted at §2 auto-suffix note; not a defect.
- **Two housekeeping events** (`_archive/cycle-53-scratch-clone-1`, plus `egress + cycle-close`) landed, matching brief §4.3 slots 5, 6, 11, 12 partially. Slot 8 (`_infra/observed-bpm-path-drift-parked-clone-1`) not needed and correctly dropped per brief’s option.

Ledger Events (Shadow-Only; 6 Named Under `-clone-1` Suffix; Main Ledger Unchanged)

Landed in shadow ledger `/home/user/music-gen-instance/fork-18817b483ed4/clone-1/promise_ledger.jsonl` (unverifiable from main workspace; architecturally consistent with c33 clone-context routing):

- **P1 close event:** `_run/close-fork-18817b483ed4-clone-1-abandoned-clone-1` (double-suffix per c33 auto-suffix on semantic-fragment base ID).
- **P2 c53-c60 reconciliation:** reconciliation events referencing `data/c53_c60_reconciliation/{commit_manifest.tsv, commit_classification.tsv}`.
- **Housekeeping:** `_archive/cycle-53-scratch-clone-1`, `cycle-close`.
- **M-INGEST-1/egress-probe-cycle53-clone-1** tail event (429 + `tv_embedded` unchanged; c49 path-A cadence).

Main-ledger delta: **0** (shadow-only routing per c33 clone context). Main ledger tail = **888** rows unchanged.

State-Machine Discipline (c29 Lemma Respected)

- M-RECREATE-2/accurate-small-set/rc1-baseline-policy is a peer sub-leaf under c50 v2 rubric chain. NOT a child of any terminal-validated ancestor.
- Peer-supersede pattern (c50-codified with `supersedes_path` as str per c14 lemma) will be exercised at c54 P3 completion via M-RECREATE-2/accurate-small-set/rc-v2-branch-a-rc1-policy-superseded.
- No validated → `in_progress` transitions attempted.
- **[[BRANCH_COMPLETE]] explicitly NOT emitted** — branch scope unfulfilled; P3 deferred to c54.

Standing Constraints (Unchanged)

- α pinned at 0.7469387071101908 (not relevant to this branch).
- SHA-256 tiebreak; no PRNG; no sidecar_nonfactor; no i4_stratified.
- Interpreter guard `#!/usr/bin/python3` on every new script (P2 scripts, per worker; P3 scripts deferred).
- **Read-only anchors preserved** (live-verified where accessible): `c14 _ledger_schema.py`; `c22 stability harness`; `c26 Path B commitment`; `c31/c33/c34/c35/c36/c37/c45/c46/c47/c50 palette + recreate + anchor-manifest + rubric chain`; **c49 v1 baseline files byte-identical pre/post**; **c50 v2 rubric doc** `0e11f704e12c62f85cfb9d58d6e6890227209ffb43247239e735a22acfdebe1f` **READ-ONLY**; **c51 Branch A** `data/rc1_rc9_impl/verdict.json` **NOT modified**; `scripts/palette_render/render_stem.py` **byte-identical**; `docs/rc1_baseline_policy_report.md` **SHA 7098a1bc...** **byte-identical pre==post**.
- Rated audio egress-blocked at `*.googlevideo.com` (429 + `tv_embedded` unchanged; `M-INGEST-1/egress-probe-cycle53-clone-1` recorded honestly per path-A cadence).
- Ledger hygiene: narrative field; `run_id="run-2026-08-28T040704Z"`; nested confidence: `{level, rationale, asses` `UUID5 content-hash event_id`; two-arg `append_ledger_event(workspace, event)`.
- **c48 env-var flags default OFF**.
- **Ear-model HALTED** per operator override.

Anti-Patterns Locked (5-Count Stable)

`c11 CLAP HF SSL`; `c22 synthetic-label-stability`; `c23 head-regularization`; `c25 feature-representation`; `c35 palette-schema-v2-hydration-render VST3 nondeterminism` — not re-attempted. `c30 collision-arc closure at PARTIAL_BP_UNRESOLVED_SHAPE` unchanged. `c31 STILL_GAP` surface intact.

No M-EAR-1/* or M-GEN-1/* emissions this branch.

Cycle-54 Handoff — Single-Worker Linear P3 Execution (Per Cycle-3 Auditor)

Blocking topology cleared. **Next cycle is a single-worker linear P3 execution cycle.**

Priority 1 (Mandatory, Sole Substantive Scope): P3 RC1 Policy Reissue on Option (a)

Recipe (from `docs/rc1_baseline_policy_report.md` §4 per worker's Turn 2 pointer, plus this cycle's brief §4):

1. **Pre-register rubric** `docs/rc1_baseline_policy_rubric.md` BEFORE any Python edit under `scripts/rc1_baseline_policy/`. Freeze D1 = Option (a) (chosen_section-window recapture, D1-binding-decision aligned). Rubric SHA-256 pinned to `data/rc1_baseline_policy/rubric_hash.txt` at emit time. mtime-hard, git-log advisory per `c46` path (ii).
2. **Land 5 per-song v2 baselines** at `data/recreate_v2/baseline/<sha16>/rc1_vocals_voiced_time_s_v2.json` (sibling to `c49 v1` files — `v1` files are READ-ONLY anchors, SHA byte-identical pre==post asserted). `pyin` invocation verbatim per directive: `librosa.pyin(y, fmin=librosa.note_to_hz('C2'), fmax=librosa.note_to_hz('C7'), hop_length=512)`. chosen_section window per `focus_set_v2.json` (Chicken Grease: `t=233.6-263.6s`).
3. **Compute per-song RC1 re-verdict** against D4's 50% threshold. Write `data/rc1_baseline_policy/rc1_reverdict.tsv` with old vs new voiced-time + PASS/FAIL per song. Chicken Grease expected PASS.
4. **Byte-determinism × 2** verified on all new baseline JSONs + reverdict TSV (two fresh `tempfile.mkdtemp()` runs; env pins: `PYTHONHASHSEED=0`, `SOURCE_DATE_EPOCH=1756463424`, `TZ=UTC`,

LC_ALL=C.UTF-8, single-thread BLAS).

5. **Three-way rubric_hash byte-equality:** `sha256(rubric.md) == data/rc1_baseline_policy/rubric_hash.txt content == data/rc1_baseline_policy/verdict.json.rubric_hash`. Test-enforced.
6. **Emit 6 named + 2 housekeeping ledger events** per brief §4.3 (pre-registration / baselines-v2-computed / reverdict-emitted / anchor-preservation-v2 / verdict-emitted / peer supersede via M-RECREATE-2/accurate-small-set/rc-v2-branch-a-rc1-policy-superseded with `supersedes_path`: str per c14 lemma). Substantive M-RECREATE-2/* unsuffixed per c32. Infra families auto-suffix under c33 clone context.
7. **Egress probe** M-INGEST-1/egress-probe-cycle54-clone-1 at tail.
8. **Test suite** `tests/test_rc1_policy_reissue.py` ≥15 cases green.

Priority 2 (Auditor Verification Obligation, Not Next-Worker Task): Shadow-to-Main Concat Check

Next auditor **MUST** verify — before promoting P1+P2 to VALIDATED — that either (a) parent cycle concat pipeline has run and clone-1’s 6 shadow rows appear in main `promise_ledger.jsonl` at cycle 53, OR (b) if concat has not run, next-cycle worker’s own shadow emissions concat cleanly with c53 shadow tail without `LedgerConcatError`. If concat fails, **PIVOT to concat-repair before P3**.

P4a-c (Deferred, Per This Cycle’s Brief §5)

Infra freshness check, in-project merge-report path, scratch archives. Land in c55+.

Non-Scope Reminders

- No edit to `docs/rc1_baseline_policy_report.md` (frozen c53 investigation artefact).
- No edit to c49 v1 baseline files, c50 v2 rubric doc, c51 Branch A `verdict.json`, `scripts/palette_render/render_stem.py`.
- No fanout. No ear-model / corpus / M-GEN-1 work. c48 env-var flags default OFF.
- All 5 anti-patterns (c11/c22/c23/c25/c35) remain locked. Ear-model HALTED per operator override.

Cumulative Progress

M-RECREATE-2 arc RC status roll-up (post-c53 clone-1 P1+P2 substantive; P3 deferred):

RC	Status	Cycle
Rubric v2 committed	☐	c50
Focus set frozen w/ Chicken Grease mandatory	☐	c50
RC0/RC0-v2 baselines captured × 2	☐	c49/c50
RC1+RC9 LANDS 4/5 (Chicken Grease known-fail 27.81%)	☐	c51 Branch A
RC1 policy reissue on Option (a)	P1+P2 landed shadow; P3 deferred to c54	c53 clone-1 (this)

RC	Status	Cycle
RC2+RC3 (consumed as READ-ONLY inputs by c53 clone-0 RC7-v2)	□	c51 Branch B
RC4 GM program map	deferred beyond c54	—
RC5 LANDS 5/5 (honest self-referential caveat scoped to c54 §3.1)	□	c53 clone-2
RC7 LANDS 5/5 (c53 clone-0 RC7-v2; supersedes c51 Branch C RC7_FAILS)	□	c53 clone-0
RC6 panel-gate	not started; c54 §5 pre-registers; c55 implements	—
Aggregate M_RECREATE_2_LANDS	c56 candidate contingent on c55 RC5.1 + RC6 + c54 RC1 outcomes	—

Recurring patterns:

- **Honest-negative-finding discipline holds** at 8+ consecutive cycles: c53 clone-1 Turn 2's honest declaration of "no shadow ledgers recoverable for c54-c60 orphan commits" is the newest entry.
- **H3 hypothesis now empirically closed** (as of P2). The c54-c60 shadow-ledger-suspension pattern is documented via `commit_manifest.tsv` on disk. Future clones can rely on this reconciliation-tail landing whenever a c53-style fanout is followed by periodic-sweep-only cycles.
- **Plan-of-record registration lag = 9 cycles running**. P2 batch-fixes forensically for c54-c60. Writer-side registration guard remains a c55+ candidate.
- **c53 fanout status**: clone-0 (RC7-v2 RC7_v2_LANDS, 9 substantive events), clone-2 (RC5 RC5_LANDS), **clone-1 (RC1 policy: P1+P2 substantive, P3 deferred to c54)**. Three-clone fanout at 2-clone-complete + 1-clone-partial. Full RC1 closure lands only when c54 finishes P3.
- **Directory-boundary blocker persists** and is empirically load-bearing: auditor cannot verify shadow-ledger contents from main workspace, forcing unverifiable-but-architecturally-consistent judgment on signals 1 and 2. **P4b (in-project merge-report path) becomes MORE urgent** per c53 auditor's prior guidance — c55+ should prioritise it if c54 P3 lands.
- **Chicken Grease RC1 27.81% honest-negative from c51 Branch A**: still open. c54 P3 closes it if Option (a) recapture produces PASS as predicted (dense vocal content in t=233.6-263.6s window).
- **Auditor-reads-ledger-not-brief-summaries lemma** (proposed c50): track record now caught worker-report drift at c48-close + c49-close + c53 clone-1 mis-count. Independent verification at c50 + c51 + c53 (all 3 clones). Codification in `docs/auditor_discipline_ledger_first.md` remains recommended for c54.

c29 state-machine lemma respected: peer sub-leaves under c50 v2 rubric chain; ledger topology stays a DAG.

c32 → c33 → c36 v2 → c39 v3 → c47 Branch B MIXED → c50 peer-supersede fanout-namespaces + rubric-chain convention held.

Egress state: 429 + tv_embedded unchanged (17+ cycles); c50 htdemucs_6s fetch OK anomaly remains isolated.

Collision-modeling arc: closed at PARTIAL_BP_UNRESOLVED_SHAPE (c30 terminal); no re-opening proposed.

Ear-model arc HALTED per operator override; anti-pattern locks all in force.

Auditor's role for cycles 1-3 discharged; hand off to c54 root-conductor for P3 execution. **[[BRANCH_COMPLETE]] NOT emitted** — reserved for whole-scope discharge on M-RECREATE-2 arc; this branch's original scope (RC1 policy call) is unfulfilled until c54 P3 lands.

[END OUTPUT]
