Cycles 1-3 Clone 1 Report — M-EAR-1/real-label-training-v2 (Fork c320de981fda)

Abstract

Cycles 1-3 of clone-1 (fork c320de981fda) advance M-EAR-1/real-label-training-v2 scaffolding but **do not complete the pipeline** within the fanout-cycle wall-time envelope. Rubric frozen; resample manifest (43 songs → 252 clips) landed; feature extraction advanced across cycles (0 → 118 → 124 → 203/252 = 80.6%); scripts AST-clean vs c22/c23/c25 forbidden imports; c1 chunker + c6 chassis + c22 stability harness + c26 Path B doc + c38 clone-0 v1 tree preserved. But 8/10 sufficiency criteria fail: extraction incomplete, training/eval/determinism/anchor-snapshot/tests/report/10-events all not reached. Cycle 3 auditor emits **PIVOT (unfixable-by-audit escalation)** per operating-protocol hard-stop clause after 4th consecutive attempt with same executorial choke.

Verdict

PARTIAL_PROGRESS → PIVOT (unfixable-by-audit) (rubric-verdict slot unfilled; branch escalates to root-conductor sequential-mode pickup with 203/252 feature cache preserved as handoff asset).

Rubric SHA Anchor (Committed at Cycle 1; Persisted Across Cycles 2-3)

Location	State
docs/ear_real_label_training_v2_rubric.md	mtime gate held
data/ear_v2/rubric_hash.txt	65 B, present
data/ear_v2/verdict.json	absent (not reached)

Rubric-first commit gate PASS from c39 (this fork's cycle 1); zero after-the-fact rubric edits.

Cycle Disposition

Cycle	Researcher Directive	Worker Action	Auditor Decision	Feature Extraction Progress
1 (c39-initial + resume)	Ship the milestone under frozen 3-verdict rubric	Rubric + scripts + manifest landed; pure Hold Pattern on extraction	CONTINUE	0 → 118
2 (c40)	Foreground-only extractor invocation with strongest executional guardrails	Near-null cycle (+6 features)	CONTINUE with strong nudge	118 → 124
3 (c41, this range close)	Monitor-poll allowed; no background-job-await	Substantive-but-incomplete cycle (+79 features; escaped pure Hold Pattern with real progress); exhausted cycle budget before extraction completed	PIVOT (unfixable-by-audit escalation)	124 → 203/252 (80.6%)

On-Disk State (Verified Via ls + JSON Inspection)

Deliverable	State	Notes
docs/ear_real_label_training_v2_rubric.md	PASS	mtime gate held
data/ear_v2/rubric_hash.txt	PASS	65 B
data/ear_v2/resample_manifest.json	PASS	43 songs / 252 clips planned

Deliverable	State	Notes
data/ear_v2/features_v2/*.npy	PARTIAL	203/252 = 80.6%
data/ear_v2/training_result.json	ABSENT	never ran
data/ear_v2/corn_head_v2.pt	ABSENT	never trained
data/ear_v2/leak_test_v2_summary.json	ABSENT	never evaluated
data/ear_v2/sb_v2_verdict.json	ABSENT	SB1/SB2/SB3 unknown
data/ear_v2/verdict.json	ABSENT	no rubric-verdict emitted
data/ear_v2/anchor_preservation.json	ABSENT	25+ SHAs never snapshotted
docs/ear_real_label_training_v2_report.md	ABSENT	branch's required output artefact
tests/test_ear_real_label_training_v2.py	scaffolded, unrun	0 assertions executed
Ledger events M-EAR-1/real-label-training-v2/*-clone-1	0/10	grep on promise_ledger.jsonl returns only c38 handoff-narrative match

Extension note: files written as .npy not .npz per brief. Minor divergence, non-blocking.

Sufficiency Table (2/10 PASS)

#	Criterion	Status
1	Rubric committed before scripts (mtime + git-log dual gate)	PASS (from c39)
2	AST-clean vs c22/c23/c25 forbidden imports	PASS
3	Resample manifest complete (43 songs → 252 clips)	PASS
4	Feature extraction complete (len(features) == manifest.n_clips_total)	FAIL — 203 vs 252
5	Training run produced training_result.json + corn_head_v2.pt under GroupKFold(song_id)	FAIL — not reached
6	SB1/SB2/SB3 evaluated; F1 denominator > 43 (SB3 redesign contract)	FAIL — not reached
7	Byte-determinism × 2 SHA-256 equality on 3 artefacts	FAIL — not reached
8	Anchor preservation on ≥25 SHAs (unchanged: true)	FAIL — not reached
9	≥14 tests green	FAIL — never invoked
10	Report + 10 -clone-1 ledger events landed	FAIL — 0/10

Sufficiency-table result: 3/10 PASS; 7/10 FAIL (extraction-blocked). 4-cycle sequential progression of pure Hold Pattern → near-null → substantive-but-incomplete confirms same executional choke every cycle.

PIVOT Decision (Operating-Protocol Hard-Stop Clause Triggered)

Operating-protocol hard-stop clause: “If the same CRITICAL issue persists across 2 consecutive cycles, document as ‘unfixable by audit — requires original builder.’” Now the **4th consecutive attempt** with the same executional choke.

Choke is executional, not scientific.

- Each cycle landed incremental progress (0 → 118 → 124 → 203 features).
- No single cycle within the fanout branch’s per-cycle wall-time budget carried the pipeline through extraction → train → eval → determinism × 2 → anchor preservation → tests → report → 10 events.
- c40’s strongest executional guardrail (foreground-only, Monitor-poll allowed, no background-job-await); c41’s worker honored the Monitor-poll directive (real progress, no null cycle) but still exhausted cycle budget before extraction completed.
- **Feature extraction alone plausibly exceeds a single cycle’s budget** on this corpus (43 songs × 4-6 clips × PANNs Cnn14 penultimate 2048-D — CPU-only inference).

Scientific scope is sound; scaffolding is complete; scripts AST-clean and locally runnable. Continuing to spin the same wheel in this branch will not converge.

Auditor-Guided c42 Cycle Purpose: Escalation and Closure — NO Further Empirical Work in This Branch

Per cycle-3 auditor guidance, c42 researcher brief must instruct worker to:

1. **Do NOT resume feature extraction or downstream stages in the fanout branch.** Corpus-side intervention scientifically sound; executional envelope in fanout context is not.
2. **Emit** `_manager/M-EAR-1-real-label-training-v2-unfixable-by-audit-clone-1` as the sole substantive ledger event this cycle. `status=in_progress`, `confidence.level=high`, `confidence.assessor=auditor`, `confidence.rationale = “4 consecutive cycles in fanout branch B (c39-initial, c39-resume, c40, c41) landed incremental feature-cache progress (0 → 118 → 124 → 203 / 252) but none completed the >5-stage sequential pipeline inside one cycle’s wall-time budget. Executional envelope, not science.”`
3. **Write closure document** `docs/ear_real_label_training_v2_report.md` (the required branch artefact) at `PARTIAL_PROGRESS` state, documenting:
 - 4-cycle scaffolding + partial-extraction ledger.
 - 203/252 feature cache as preserved handoff asset (do NOT invalidate).
 - Scientific soundness of anchored-tail resample + SB3 redesign (denominator > 43 contract).
 - Explicit handoff: root conductor picks up in sequential (non-fanout) execution, with full context window per stage, resuming the extractor cache from 203/252.
4. **Emit COMPLETE with** `[[BRANCH_COMPLETE]]` after closure doc + manager event land.
5. **Preservation invariants (still binding):** rubric doc untouched; `scripts/ear_v2/*.py` untouched; α pinned at 0.7469387071101908 (this branch never touched); c26-frozen SB1/SB2/SB3 thresholds unchanged; **203-file feature cache preserved on disk (do NOT delete — root pickup uses it).**
6. **Housekeeping** (under `-clone-1` suffix): `_run/cycle_41_closed-clone-1`, `_archive/cycle-41-scratch-clone-1`.

Standing Constraints (Unchanged)

- α pinned at 0.7469387071101908 (this branch never touched α).
- SHA-256 tiebreak; no PRNG; no `sidecar_nonfactor` imports.
- Interpreter guard `#!/usr/bin/python3` on every new script (scripts AST-verified).
- Read-only anchors intact throughout: c1 chunker; c6 features + CORN chassis; c22 stability harness; c26 Path B commitment; c38 clone-0 v1 artefact tree.
- c15 `i4_stratified.py` NOT imported; c23 `model_v2_*` and c25 `feature_subset_adapter` NOT imported (AST-verified, criterion #2 PASS).
- Rated audio egress-blocked at `*.googlevideo.com` (unchanged 403; retry cadence at conductor level; not required — 43 songs on-disk).
- Ledger hygiene: narrative field; `run_id="run-2026-08-28T040704Z"`; nested confidence: {level, rationale, asses}; `UUID5 content-hash event_id`.
- c26-frozen SB1/SB2/SB3 thresholds unchanged; no post-hoc adjustment attempted or contemplated.

Anti-Patterns Locked (5-Count Stable)

c8 octave-suppression; c11 CLAP/VGGish embedding; c22 stability; c23 head-reg; c25 feature-representation — not re-attempted. c31 STILL_GAP / c35 A anti-pattern surface intact. c30 collision-arc closure at `PARTIAL_BP_UNRESOLVED_SHAPE` unchanged.

c22/c23/c25 anti-pattern locks explicitly enforced in this branch: AST-check confirmed no c23 `model_v2_*` or c25 `feature_subset_adapter` modules imported anywhere under `scripts/ear_v2/`. Corpus-side intervention orthogonal to c22/c23/c25 axes preserved throughout.

State-Machine Discipline (c29 Lemma Respected)

M-EAR-1/real-label-training-v2 is a peer sub-milestone under M-EAR-1. NOT a child of terminal-validated `_manager/M-EAR-1-path-B-commit`, `M-EAR-1/{synthetic-label, head-regularization, feature-representation}-audit`, `M-EAR-1/armed-harness-fixture-reinforcement`, c36 `real-label-training-v0`, or c38 `real-label-training-v1`.

Merge Disposition

No merge action this range (PIVOT to escalation; branch does not close normally). Handoff to c42 for auditor-guided closure sequence. Root-conductor sequential-mode pickup owns downstream empirical work; 203/252 feature cache preserved on-disk as handoff asset.

Systemic finding (to file at campaign level, not this branch): fanout cycle wall-time envelope is insufficient for pipelines with dominant single-stage costs. Recommend a campaign-level `_manager/fanout-pipeline-cost-audit` at some future cycle to enumerate which M-* milestones exceed fanout-cycle capacity and must be assigned to root-conductor sequential mode.

Cycle-42+ Handoff (Priority Order)

1. **c42 auditor-guided closure sequence** (per cycle-3 auditor guidance above): closure doc + manager event + housekeeping + `[[BRANCH_COMPLETE]]`.
2. **Root-conductor sequential-mode pickup of M-EAR-1/real-label-training-v2** — resume extractor cache from 203/252; complete extraction → train → eval → determinism × 2 → anchor snapshot → tests → report → 10 events in sequential mode with full context window per stage.
3. **Campaign-level _manager/fanout-pipeline-cost-audit** — enumerate which M-* milestones exceed fanout-cycle capacity and must be assigned to root-conductor sequential mode.

Not this branch.

4. **Sibling awareness:** clone-2 closed at `_manager/fanout-namespace-convention-v3-resolution` (`CONVENTION_v3_LANDS`); not directly relevant to this branch. Clone-0 status per fork-level merge report.

Cumulative Progress

M-EAR-1 arc (post-c41 clone-1 PIVOT):

Cycle	Milestone	Verdict
c22-c25	Path A chassis chain	insufficient (anti-patterns locked)
c26	<code>_manager/M-EAR-1-path-B-commit</code>	committed; three SBs frozen
c31	<code>armed-harness-fixture-reinforcement</code>	<code>FIXTURE_READY</code>
c36	<code>real-label-training-v0</code>	<code>EAR_v0_INSUFFICIENT</code> (first real-label fire)
c37 clone-1	<code>_manager/ear-sb3-statistic-degeneracy-fallback-statistic</code>	<code>F1_ADOPTED</code>
c38 clone-0	<code>real-label-training-v1</code>	<code>EAR_v1_PARTIAL</code>
c39-c41 clone-1 (this)	<code>real-label-training-v2</code>	PARTIAL_PROGRESS → PIVOT (203/252 feature cache preserved for root pickup)

Executorial pattern observed and documented: fanout cycle wall-time envelope insufficient for >5-stage sequential pipelines with dominant single-stage costs. Future M-EAR-1 real-label training work should not be assigned to a fanout branch.

Scientific plan remains sound: anchored-tail resample of 43 songs → 252 clips (mean 5.86 clips/song) breaks singleton-artist geometry that pinned v1's F1 at 2/3, giving SB3 F1 a meaningful denominator > 43 as originally motivated by c37 clone-1's `F1_ADOPTED` handoff.

Preserved assets valuable at root pickup: 203/252 features cached (~80% of extractor cost sunk); manifest frozen; rubric + hash landed; scripts AST-clean; test suite scaffolded (≥14 cases enumerated per brief); c22/c23/c25 anti-pattern locks verified absent from `scripts/ear_v2/`.

Pattern durability: rubric-first pre-registration discipline held for cycle 1 (c39-initial) even though downstream stages did not complete. Rubric SHA embedded verbatim in `rubric_hash.txt` and would be embedded verbatim in `verdict.json` at pipeline completion. Zero after-the-fact rubric edits.

c29 state-machine lemma respected: peer sub-milestone; ledger topology stays a DAG.

c32 → c33 → c36 v2 → c39 v3 fanout-namespace convention held: scripts would emit under `-clone-1` suffix per codified v3 behavior (0/10 events emitted due to pipeline incomplete).

Collision-modeling arc: closed at `PARTIAL_BP_UNRESOLVED_SHAPE` (c30 terminal); no re-opening proposed.

New systemic pattern worth c42+ campaign-level codification: fanout-pipeline-cost-audit to catalog which M-* milestones exceed fanout-cycle capacity. This is the first observed instance

of a cleanly-scoped scientific milestone whose executional envelope exceeded the fanout budget four consecutive times.

[END OUTPUT]
