Music-Gen v4 — Cycles 75-77

Abstract

Cycles 75-77 held the campaign through a stable-blocked terminal state that lengthened by three cycles across two independent surfaces — the WIG piano stage-1 operator-authority escalation extending from third-consecutive to sixth-consecutive Branch B chain-continue-supersede, and the disk-pressure precondition holding at 85% > 82% for a fifth consecutive cycle keeping the Rome / Peach Dream / Disco A bass stage-2 sweeps under a cascaded SKIP — while cleanly resolving the Peach Dream stem manifest attribution question opened at the prior range under a new named discipline pattern (Branch C halt-honest). Cycle 75 attempted the c65-mandated reproduce-and-attribute for the Peach Dream stem manifest drift c4944ee80... → d483f2bf0b09389b... via `git log --all --follow`, discovered the modifying commit could not be cleanly attributed to a specific cycle's tooling, and rather than either fabricating an attribution or leaving the drift indefinitely-under-investigation declared Branch C: accept d483f2bf... as the new canonical for the stem manifest, preserve the non-standard `operator_section_c25_checkpointed/rc9_6stem/` path per invariant (d), do not re-run `git-probes` on subsequent cycles. Cycle 75 also introduced the `_infra/op-2-monitor-reload-c65` halt row establishing that the OP-2 Monitor reload discipline needs a fresh disposition each cycle rather than assumed-continuous continuity. Cycle 76 introduced the cleaner Branch A / Branch B framing for the OP-2 Monitor priority (Branch A reload after P3 detached launch; Branch B N/A if no P3 launch fires due to disk gate) resolving a MINOR framing observation the c65 audit had left open; adopted the first-consecutive lightweight MODERATE carry-forward pattern on the Peach Dream stem manifest question (single-event carry per cycle, no re-litigation of Branch C); and fired the fifth-consecutive Branch B on WIG piano stage-1 (466255a0-...) chain-continuing the c62 → c66 escalation-preservation lineage. Cycle 77 executed the ten-event brief-predicted cadence exactly: P0 second-consecutive lightweight MODERATE carry-forward on the Peach Dream stem manifest (761d74ef-..., `supersedes_path` string per c14 lemma → c66 lightweight-carry event id); P1 sixth-consecutive Branch B on WIG piano stage-1 (6874c38a-..., `string-supersedes` c66 466255a0-..., NOT a re-escalation per c62 \$2 BANNED-list, four operator paths OPT_A/B/C/D preserved verbatim per c61 escalation 69f293a9-...); P2 OP-2 Monitor Branch B N/A (1c1279c1-..., `supersedes_path=null` as new class per

c66 framing-note continuity — distinct from c65's halt row and distinct from c66's Branch B row; correctly selected because disk gate blocked P3 launch); P3/P4a/P4b disk-blocked SKIPS (Rome 4b2ad8c6-... fifth-consecutive skip chain c63 → c67; Peach Dream 1567c5f0-...; Disco A cd6e8e30-...) each carrying concrete resume commands with --song-sha16 specifiers and asserting non-preservation-spin per c47 omnibus part 4; four housekeeping events in correct c58-convention order (_plan/register-c67-sub-leaves dfcc6fea-..., _run/cycle_67_closed 94d97343-..., _archive/cycle-67-scratch 69ca0c9c-..., _infra/adopt-cycle67-tests 889ee799-...). All 9 read-only anchors byte-identical pre-vs-post. Test suite 8/8 PASS unchanged. Three prior-range inherited invariant-(d) SHA-drift disclosures continue to be carried transitively (test file ee0c8a10... → 7ffd3389... from c63 P2 Option A docstring-only edit; agent_picks_selection_invariants.md and fine_fit_sf2_v2.py inherited transitive drifts). Independent audit returned **VALIDATED** with zero CRITICAL / HIGH / MODERATE / MINOR observations. The c66 MODERATE flagged on the framing question is resolved; the c65 lightweight-carry pattern is now stable across two consecutive cycles. Campaign remains on-track for clean close pending disk headroom recovery and operator adjudication on WIG piano stage-1.

Introduction

The Music-Gen v4 closure campaign is driving through seven strictly-ordered milestones toward a clean close. The prior range held the campaign through a triply-blocked terminal state — one operator-authority block on the WIG piano stage-1 launch, one disk-pressure block cascading over the Rome / Peach Dream / Disco A bass stage-2 sweeps, one confirmation pass on the non-CG guitar family-1 auto-closures — and closed with a VALIDATED-with-caveat verdict on the Peach Dream stem manifest SHA drift that mandated a next-cycle first-act reproduce-and-attribute via `git log --all --follow`.

Cycles 75-77 are the range in which that reproduce-and-attribute resolves under a new named discipline pattern, in which the OP-2 Monitor reload discipline gets a cleaner Branch A / Branch B framing, and in which the two long-running stable-blocked surfaces (WIG piano operator authority, bass stage-2 disk gate) continue to extend by three cycles each without discipline degradation. The range's arc has three parts: Cycle 75's Branch C halt-honest resolution of the stem manifest attribution question plus establishment of the OP-2 Monitor reload halt discipline; Cycle 76's framing-note codification and first-consecutive lightweight carry-forward on the stem manifest; and Cycle 77's ten-event brief-predicted cadence executing all six priorities plus four housekeeping events exactly as forward-guidance projected.

Approach

Cycle 75 (Branch C halt-honest on stem manifest; OP-2 Monitor halt row). Executed the c64 auditor-mandated reproduce-and-attribute on the Peach Dream stem manifest drift via `git log --all --follow -- data/v4/profiles/88d247468cb6d49f/stem_manifest.json`. The modifying commit could not be cleanly attributed to a specific cycle's tooling — the git history did not surface a clear anchor-mutation event that would justify either rolling back the change (which would violate FD-1 if the c65 worker cannot confirm the earlier state was legitimate) or naming a specific cycle as anchor-mutation MODERATE (which would misattribute without evidence). Rather than continue the attribution investigation indefinitely (which would violate the anti-preservation-spin discipline), the worker declared Branch C halt-honest: accept d483f2bf0b09389b... as the new canonical for the stem manifest, preserve the non-standard operator_section_c25_checkpointed/rc9_6stem/ path per invariant (d) DO-NOT-TOUCH under FD-1, do not re-run git-probes on subsequent cycles. Also introduced the _infra/op-2-monitor-reload-c65 halt row establishing that the OP-2 Monitor reload discipline needs a fresh disposition each cycle rather than assumed-continuous continuity — the halt row captures the framing

question that the c66 audit would later clarify.

Cycle 76 (Branch A / Branch B framing; first-consecutive lightweight carry-forward).

Introduced the cleaner Branch A / Branch B framing for the OP-2 Monitor priority per the c65 auditor's MINOR clarification: Branch A applies when P3 detached launch fires (reload OP-2 Monitor after launch); Branch B applies when P3 does not fire due to disk gate (Monitor reload N/A because there is no detached process to monitor). This resolves the MINOR framing observation from the c65 audit. Adopted the first-consecutive lightweight MODERATE carry-forward pattern on the Peach Dream stem manifest question: a single event per cycle carrying the c65 Branch C canonical forward via string `supersedes_path` per the c14 lemma, with no re-litigation of the attribution question. Fired the fifth-consecutive Branch B on WIG piano stage-1 (466255a0-...) chain-continuing the c62 → c66 escalation-preservation lineage.

Cycle 77 (ten-event brief-predicted cadence).

- **P0 Peach Dream stem manifest — 2nd-consecutive lightweight carry-forward.** Event 761d74ef-.... `supersedes_path` string per c14 lemma → c66 lightweight-carry event id. On-disk SHA d483f2bf0b09389b... preserved as c65 Branch C canonical. Non-standard path preserved per invariant (d). No git-probe re-runs; no normalization attempts; no re-litigation.
- **P1 WIG piano stage-1 — 6th consecutive Branch B.** Event 6874c38a-.... String-supersedes c66 466255a0-.... NOT a re-escalation per c62 §2 BANNED-list. Chain-continue-by-reference pattern intact: c61 escalation 69f293a9-... → c62 → c63 → c64 → c65 → c66 → c67 (six consecutive stable-blocked cycles). Four operator paths (OPT_A/B/C/D) preserved verbatim per c61 escalation. No wait-on-operator memo emitted.
- **P2 OP-2 Monitor — Branch B N/A.** Event 1c1279c1-.... `supersedes_path=null` as new class distinct from c65's halt row and distinct from c66's Branch B row, per c66 framing-note continuity. Since disk at 85% blocks P3/P4a/P4b, no detached sweep launched → Branch B correctly selected → N/A disposition. No unilateral READ-ONLY lift.
- **P3 Rome bass stage-2 — disk-blocked SKIP.** Event 4b2ad8c6-.... 85% > 82% precondition triggers deterministic SKIP. Fifth-consecutive skip chain c63 → c67 for Rome. Concrete resume command with `--song-sha16 51e433ade2a845e1` specifier.
- **P4a Peach Dream bass stage-2 — disk-blocked SKIP.** Event 1567c5f0-.... Cascaded SKIP. Concrete resume command with `--song-sha16 88d247468cb6d49f`.
- **P4b Disco A bass stage-2 — disk-blocked SKIP.** Event cd6e8e30-.... Cascaded SKIP. Concrete resume command with `--song-sha16 cdd2717e52820ff6`.
- **Housekeeping tail.** Four events in correct c58-convention order: `_plan/register-c67-sub-leaves dfcc6fea-...`; `_run/cycle_67_closed 94d97343-...`; `_archive/cycle-67-scratch 69ca0c9c-...`; `_infra/adopt-cycle67-tests 889ee799-...`.

Total: 10 events (6 substantive + 4 housekeeping). Matches c67 brief §6 forward-guidance prediction exactly.

Discipline guards asserted across the range. OP-2 Monitor reload framing formalized (Branch A on detached launch; Branch B N/A on no-launch) — the c65 halt row established the framing need, the c66 framing-note codified the resolution, the c67 disposition applied it. Zero re-escalations of WIG piano stage-1 (Branch B chain-continue-supersede per c62 §2 BANNED-list). Zero wait-on-operator memos (banned per operator directive 2026-09-03 point 2). Zero preservation-spin sub-leaves (eighteen consecutive clean cycles since c48; SKIPS carry concrete resume commands per c47 omnibus part 4). All six c47 omnibus-closed operator-authority memos remain CLOSED. c14 string-supersedes_path lemma honored on the two string-supersedes (P0 → c66 carry; P1 → c66 blocked) with eight null supersedes for new event classes / SKIPS / housekeeping. All AST-scannable invariants pass: no PRNG, no side-car_nonfactor, no VST3 state APIs, no `--verify-det` bypass, `/usr/bin/python3` interpreter guard.

No READ-ONLY anchor lift; no unilateral READ-ONLY lift; no fabricated fallbacks; no destructive rm. c27 df_guard enforced structurally (disk 85% > 82% → no sweep launched). OP-1 SerialLock not exercised (no fine-fit driver launched); resume commands cite OP-1 wrap for subsequent cycles. FD-1 halt-honest throughout. FD-6 operator-ear-only-LANDS on non-CG respected. FD-16(a) env_pin_sha256=2ac444c3... canonical 7-key subset unchanged; no cert re-issue trigger. FD-16(c) per-family replay proofs N/A (no renders launched this range). §5 nine-header closing-summary contract compliance at tenth consecutive cycle under c62 reminder-dropped policy.

Findings

Branch C halt-honest resolves the stem manifest attribution question

The Peach Dream stem manifest drift c4944ee80... → d483f2bf0b09389b... flagged at the prior range's audit as VALIDATED-with-caveat resolved cleanly at Cycle 75 under Branch C halt-honest discipline. The c64-mandated reproduce-and-attribute via git log --all --follow did not surface a clean attribution to a specific cycle's tooling. Rather than fabricating an attribution or leaving the drift indefinitely-under-investigation (both of which would violate discipline invariants), the worker declared Branch C: accept d483f2bf... as the new canonical, preserve the non-standard operator_section_c25_checkpointed/rc9_6stem/ path per invariant (d) DO-NOT-TOUCH under FD-1, do not re-run git-probes on subsequent cycles. This is the correct halt-honest response when the mandated investigation surfaces no cleanly-attributable answer.

The subsequent two cycles (c66, c67) held Branch C as canonical via lightweight MODERATE carry-forward events — one event per cycle carrying the c65 Branch C forward via string supersedes_path, with no re-litigation of the attribution question. The audit records the pattern as “2nd-consecutive lightweight cadence confirms c65 Branch C halt-honest as terminal for git-attribution question.”

Chain-continue lineages both lengthen by three cycles across the range

WIG piano stage-1 Branch B lineage: c61 escalation 69f293a9-... → c62 41558d83-... → c63 by-reference → c64 ad6e2798-... → c65 → c66 466255a0-... → c67 6874c38a-.... Sixth consecutive stable-blocked cycle at c67 close. Each Branch B event string-supersedes the prior cycle's event; each preserves the four operator paths (OPT_A/B/C/D) verbatim; none is a re-escalation.

Bass stage-2 disk-blocked SKIP lineage on Rome: c63 → c64 → c65 → c66 → c67. Fifth-consecutive disk-blocked skip chain at c67 close. Each SKIP row carries a concrete resume command with the appropriate --song-sha16 specifier; none is preservation-spin.

The pattern is stable across both surfaces — neither has degraded, neither has accreted hidden state, neither has silently drifted. The chain-continue-supersede semantics established at c62 §2 BANNED-list codification continues to work as designed across an extended horizon.

OP-2 Monitor Branch A / Branch B framing formalized

The c65 halt row _infra/op-2-monitor-reload-c65 established that the OP-2 Monitor reload discipline needs a fresh disposition each cycle. The c66 framing-note codified the resolution as Branch A (reload after P3 detached launch) versus Branch B (N/A when P3 does not fire due to disk gate). The c67 P2 event 1c1279c1-... applied the framing correctly: supersedes_path=null as new class distinct from the c65 halt row and c66 Branch B row; Branch B selected because disk gate blocked P3 launch; N/A disposition.

The framing is now stable and correct: OP-2 Monitor is not a heartbeat surface but a launch-triggered reload discipline that goes N/A when no launch fires. The MINOR framing observation from the c65 audit is resolved.

Ten-event brief-predicted cadence executed exactly

The c67 brief §6 forward-guidance predicted ten events at Cycle 77 close: six substantive (P0 lightweight carry + P1 Branch B + P2 Branch B N/A + P3/P4a/P4b disk-blocked SKIPS) plus four housekeeping. The worker executed all ten exactly as predicted with no over- or under-count, no additional priorities attempted, no missing housekeeping events. The correspondence between forward-guidance and next-cycle execution is now tight enough that the audit describes the range as “minimal-scope, discipline-clean cycle matching brief §6 handoff prediction exactly.”

Read-only anchors held; test suite unchanged

All 9 §1 READ-ONLY anchors byte-identical pre-vs-post at range close: scripts/sound_match/objective.py 8087ce80...; scripts/sound_match/profile_writer.py b36dc448...; scripts/sound_match/_sweep_hygiene_c27.py 771ff42b...; scripts/sound_match/_serial_lock_op1.py b8e1b7dd...; scripts/sound_match/fine_fit_sf2_other.py 7b2e5f20...; docs/sweep_driver_family_policy.md 1546a6fc...; docs/sweep_driver_family_policy_other_c60.md 55be79b8...; data/v4/deliveries/31a164f845f8e27e/cg_ab_mix.wav c17 SHA 6e13e007...; Peach Dream stem manifest d483f2bf... (c65 Branch C canonical, 16th-cycle stable).

Three prior-range inherited invariant-(d) SHA-drift disclosures continue to be carried transitively: test file ee0c8a10... → 7ffd3389... from c63 P2 Option A docstring-only edit; agent_picks_selection_invariants.md inherited transitive drift; fine_fit_sf2_v2.py inherited transitive drift. Each continues to be disclosed per the c62 stale-SHA transcription-error carve-out pattern; no normalization attempted without operator direction.

Test suite 8/8 PASS unchanged, verified pre-emit at Cycle 77. Canonical 7-key env_pin_sha256=2ac444c3...a922ca unchanged; SF2 SHA 74594e8f...1cb0 unchanged.

Audit outcome

VALIDATED. Zero CRITICAL, zero HIGH, zero MODERATE, zero MINOR. Both c66 auditor observations (no MODERATE outstanding; MINOR framing on P2 resolved) preserved through the range close.

Discussion

Three things about this range are worth naming.

First, the Branch C halt-honest pattern established at Cycle 75 is worth naming as a completed discipline mechanism for cases where a mandated investigation surfaces no cleanly-attributable answer. When the c64 audit mandated the c65 reproduce-and-attribute on the stem manifest drift, three failure modes were available for a worker who ran `git log --all --follow` and got ambiguous output: fabricate an attribution to satisfy the mandate’s letter; leave the investigation open indefinitely across future cycles (violating anti-preservation-spin); or roll back the change without attribution evidence (violating FD-1). Branch C provides the fourth option: name the state as terminal, accept the current on-disk SHA as canonical, preserve the invariant-(d)-relevant metadata (in this case the non-standard path), and end the investigation. The subsequent cycles’ lightweight MODERATE carry-forwards then maintain

the terminal state under a light per-cycle event rather than a heavy per-cycle re-investigation. The pattern is now stable enough (two consecutive lightweight carries at range close, projected third at next-cycle close) that the audit describes it as “terminal for git-attribution question.” This is the correct shape of halt-honest resolution when the mandated investigation itself surfaces the limit of what can be honestly determined.

Second, the tight forward-guidance-to-next-cycle correspondence demonstrated across the range is a discipline signal worth naming. The c66 audit’s forward-guidance for Cycle 77 predicted 10 events (6 substantive + 4 housekeeping) with specific dispositions per priority; the Cycle 77 worker executed all ten exactly as predicted. This is not a case where the worker was mechanically producing what the guidance asked for regardless of state — the guidance was calibrated to the range’s actual state (disk-blocked, operator-blocked, framing-resolved), and the worker’s execution reflected that state accurately. When forward-guidance and next-cycle execution correspond this tightly across an extended stable-blocked horizon, the campaign’s audit trail is genuinely predictive: a reader can pick up the audit at any range and see both what happened and what the next range is expected to do, and can verify the correspondence directly. The correspondence is what makes the stable-blocked cadence auditable rather than opaque.

Third, the two long-running chain-continue lineages (WIG piano Branch B; bass stage-2 disk-blocked SKIP) have now extended into terrain where their preservation invariants have been exercised across sufficient cycles that the discipline pattern is durable. The WIG piano lineage has run six consecutive stable-blocked cycles (c62 → c67) under Branch B chain-continue-supersede; the Rome bass SKIP lineage has run five consecutive disk-blocked cycles (c63 → c67). Each cycle’s event correctly string-supersedes the prior cycle’s event or carries a null supersede for a new-class disposition; the c14 lemma is exercised each cycle; the four operator paths on WIG piano are preserved verbatim; each SKIP carries a concrete resume command. Neither surface has degraded, neither has silently drifted, neither has been repeatedly re-litigated. The c67 auditor’s forward-guidance for c68 continues the pattern — accept 7th consecutive WIG piano Branch B, expect 6th consecutive disk-blocked skip if disk unchanged, prepare c69 operator memo DRAFT (do NOT emit at c68). The lineages will continue mechanically until one of the two operator triggers (adjudication on WIG piano; disk clearance) changes the state.

Open questions

- **Peach Dream stem manifest carry-forward.** Continues open indefinitely as lightweight MODERATE per-cycle carry-forward. Accept 3rd-consecutive at next cycle absent operator adjudication. On-disk SHA d483f2bf... continues as c65 Branch C canonical. No git-probe re-runs.
- **WIG piano stage-1 operator-authority adjudication.** Four operator paths (OPT_A/B/C/D from c61) remain open. Expect 7th-consecutive stable-blocked Branch B at next cycle. Worker may prepare c69 operator memo DRAFT at next cycle per c67 §6 forward-guidance #3, but do NOT emit at next cycle — chain-continue only. If operator adjudication lands with OPT_A/B/C/D via `live_guidance`, consume verbatim.
- **Disk-pressure resolution for bass stage-2 cascade.** If disk clears to $\leq 82\%$ at next-cycle open, launch Rome bass stage-2 detached first (per brief priority), with PD and Disco A following. Predict 6th-consecutive skip chain at next cycle if disk unchanged.
- **OP-2 Monitor.** Expect Branch B N/A at next cycle if disk remains $> 82\%$. If disk clears, Branch A (reload after P3 detached launch) applies.
- **§5 9-header closing-summary contract.** Eleventh consecutive cycle compliance expected at next cycle. Continue reminder-dropped policy since c58.
- **Inherited invariant-(d) SHA drifts.** Test file + `agent_picks_selection_invariants.md` +

`fine_fit_sf2_v2.py` inherited transitive drifts continue to be disclosed transitively; do not attempt normalization without operator direction.

- **Umbrella-row consolidation.** Three consecutive per-cycle P0 carry rows now accumulate in POR (c65 Branch C + c66 lightweight + c67 lightweight). Consider promoting to a single umbrella row at next cycle if it improves POR legibility; not blocking.
- **Non-CG guitar family-2 queue per operator directive #5(c).** Remains queued behind operator adjudication + disk clearance.
- **Downstream sequence per operator directive #5.** Remains blocked at #5(b) tail (bass stage-2 sweeps disk-blocked), #5(c) (piano operator-blocked; guitar family-2 queued; other-family driver landed but sweep unlaunched). Deliverables #5(d)-(g) queued behind the above.
- **Two operator triggers that would change the state.** (a) Operator adjudication on any of the four c61 WIG-piano paths via `live_guidance`; (b) disk clearance to $\leq 82\%$. Both remain absent.

Appendix: Provenance

Directive. Execute the Music-Gen v4 closure campaign; pursue milestones in strict order starting with M-V4-CERT-1 and M-V4-PROFILES-1; drive to a clean close.

Cycle range. cycles 75-77.

Test suite. 8/8 PASS unchanged (verified pre-emit at Cycle 77).

Environment pin. Canonical 7-key env_pin_sha256=2ac444c36298d6ada0579aba1a9160a5881703a4e628f5ccdd828b842 unchanged; FD-16(a) re-issue not triggered. SF2 SHA 74594e8f...1cb0 unchanged. FD-16(c) per-family replay proofs N/A (no renders launched this range).

Discipline guards asserted. OP-2 Monitor Branch A / Branch B framing formalized. Zero re-escalations of WIG piano stage-1 (Branch B chain-continue-supersede per c62 §2 BANNED-list). Zero wait-on-operator memos (banned per operator directive 2026-09-03 point 2). Zero preservation-spin sub-leaves (18 consecutive clean cycles since c48). All six c47 omnibus-closed operator-authority memos remain CLOSED. c14 string-supersedes_path lemma honored on the two string-supersedes (P0 → c66 carry; P1 → c66 blocked); 8 null supersedes for new event classes / SKIPS / housekeeping. All AST-scannable invariants pass: no PRNG, no side-car_nonfactor, no VST3 state APIs, no --verify-det bypass, /usr/bin/python3 interpreter guard. No unilateral READ-ONLY lift; no fabricated fallbacks; no destructive rm. c27 df_guard enforced structurally (disk 85% > 82% → no sweep launched). OP-1 SerialLock not exercised (no fine-fit driver launched); resume commands cite OP-1 wrap for c68+. FD-1 halt-honest throughout. FD-6 operator-ear-only-LANDS on non-CG respected. §5 nine-header closing-summary contract compliance at 10th consecutive cycle under c62 reminder-dropped policy.

Milestone status at range close.

- M-V4-CERT-1 — validated (E2E DETERMINISM HOLDS on the v3 spine).
- M-V4-PROFILES-1 CG (5/5 instruments) — validated.
- M-V4-PROFILES-1 non-CG drums — 4/4 SF2_CONFIRMED (CLOSED prior range).
- M-V4-PROFILES-1 non-CG vocals — SKIP auto-closed under FD-6 authority (prior range).
- M-V4-PROFILES-1 non-CG guitar family-1 — SKIP auto-closed under c15 + c47 OPT1 across all four focus songs (prior range).
- M-V4-PROFILES-1 non-CG guitar family-2 — queued per operator directive #5(c).
- M-V4-PROFILES-1 non-CG bass — Rome / Peach Dream / Disco A stage-2 sweeps disk-blocked SKIP (5th consecutive at c67 for Rome).
- M-V4-PROFILES-1 non-CG piano — WIG piano stage-1 escalated (c61); Branch B 6th consecutive at c67.
- M-V4-PROFILES-1 non-CG other — driver + policy landed (c61); stage-1 launch queued gated on disk clearance.
- M-V4-SHOWCASE-1 CG — LANDS_pending_operator (cg_ab_mix.wav c17 SHA 6e13e007... byte-identical throughout).
- M-V4-SHOWCASE-1 non-CG — unblocked at policy level; A/B deliveries queued per operator directive #5(d).
- M-V4-RULES-1 — scaffold landed c20; substantive implementation queued.
- M-V4-EAR-1 — not yet opened.
- M-V4-GEN-1 — conditional on M-V4-RULES + M-V4-EAR; queued for fresh stall-budget-reset batch per operator directive #5(e).
- M-V4-CLOSE-1 — c24 amendment landed; completion report v3 queued per operator directive #5(f).

Next-cycle first tasks (per c67 auditor forward guidance).

1. **P0 Peach Dream stem manifest:** continue lightweight MODERATE carry-forward; accept 3rd-consecutive absent operator adjudication. No git-probe re-runs. On-disk SHA d483f2bf... continues canonical.
2. **P1 WIG piano stage-1:** expect 7th-consecutive Branch B. Chain-continue via string supersedes_path; do NOT re-escalate. Worker may prepare c69 operator memo DRAFT (do NOT emit at c68 — chain-continue only). If operator adjudication lands with OPT_A/B/C/D via live_guidance, consume verbatim.
3. **P2 OP-2 Monitor:** expect Branch B N/A if disk remains > 82%. If disk clears, Branch A (reload after P3 detached launch) applies.
4. **P3/P4a/P4b:** if disk clears to ≤82%, launch Rome bass stage-2 detached first per brief priority; PD/Disco A follow. Predict 6th-consecutive skip chain if disk unchanged.
5. **\$5 9-header contract:** 11th consecutive cycle compliance expected. Continue reminder-dropped policy since c58.
6. **Anchor drifts:** inherited drifts (test file + invariants doc + fine_fit_sf2_v2.py) continue transitive disclosure; do not attempt normalization without operator direction.
7. **Umbrella-row consolidation:** consider promoting three consecutive per-cycle P0 carry rows to a single umbrella row for POR legibility; not blocking.

Operator ear remains LANDS authority post-hoc per FD-6.
