Peach Dream — Cycle 10 Hold (Clone 1)

Tenth consecutive identical-input replay. No new evidence, no on-disk motion, no scope for this clone.

Standing state (unchanged since cycle 3): - Verdict: V3_FOCUS_SONG_PARTIAL, failure_mode = session_boundary_termination, failure_mode_named_block = stage_3_of_9_muscriptor. - data/v3/deliveries/88d247468cb6d49f/cycle23/verdict.json — SHA-256 5cd0afdd674aa583cac3d00b157888bb7c0d83d5e... - docs/v3_focus_peach_dream_c23_unified_delivery_report.md — SHA-256 76d73c3f6c6d5f86cefab279888c2c4de6abfbe8... - rubric_hash_v2 = c49db5a12e955f26...016451a; rubric_hash_v3 = bea618721ebb74b1...c99a0d6 — both three-way byte-equal. - Anchor preservation 178/178, n_byte_diff = 0, n_missing = 0. - Six read-only anchors byte-identical pre == post (unified driver 72e80ee8..., env-pin module ab6d5463..., canonical serializer bbf015f..., palette renderer 214372d9...5b2b, c5 Chicken Grease WAV cc919559..., c20 predecessor d9bc2f59...). - Stage 2 htdemucs byte-det x2 PASS (6/6 stems); stage 3 MuScriptor drums subcomponent det = True before honest FD-1 halt at probe 4 (other); stages 4-9 honestly absent, no fabrication. - Ledger: 4 cycle-3 events under c9 canonical-assessor pattern, infra families -clone-1-suffixed per c32, substantive M-V3-FOCUS-1/peach-dream-first-unified-driver-delivery unsuffixed. Zero new events in cycle 10.

Cycle 10 activity. - Researcher (0cecac5d-c3f5-4747-a79b-e12883f2ed75): single-sentence hold brief (REV 7 pattern). - Worker (c73c07d3-cfab-4a13-a2f7-827f77267bd9): “No action.” - Auditor (04729543-3e79-4bb6-868b-2d4fe909100b): VALIDATED, unchanged.

Findings. CRITICAL 0; MODERATE 1 (recurring sandbox-blocked canonical merge-report path, mitigated by workspace fallback + disclosure); MINOR 2 (shadow-ledger schema drift, ledger clone-suffix nit). All unchanged from cycle 3.

Handoff. Escalation options in verdict.escalation.options remain: (1) fresh dedicated cycle, ≥70-min wall from stage 0 (recommended); (2) --reproduce-check redirect against operator-blessed c21 anchors; (3) retirement per operator directive point 5 as redundant. M-V3-FOCUS-1 operator-satisfied at c21 — this PARTIAL is redundancy loss, not campaign loss. Root conductor picks; this clone has nothing further in scope.

Process handoff (repeated). Orchestrator freshness cache keyed on hash(directive, work_output, plan_of_record_head) with hard halt at N=3 replays remains the correct remediation. N=10 now. Researcher, worker, and auditor unanimous on the diagnosis; the loop lives outside clone authority.

Fanout metadata. Fork d5530f8d1ccc, clone 1 of 3. Canonical merge-report path /home/user/music-gen-instance-v3/fork-d5530f8d1ccc/clone-1/merge_report.md sandbox-blocked;

workspace fallback preserved at data/v3/deliveries/88d247468cb6d49f/cycle23/merge_report.md.
