Music-Gen v4 — Cycles 84-86 (Terminal Closure)

Abstract

Cycles 84-86 are the terminal closure of the Music-Gen v4 campaign. Cycle 84 landed the third M-V4-GEN-1 iteration under VOMM primary (stall counter 2/8 → 3/8), the eight-case tests/test_ear_batch_scoring_c75.py test suite for the batch-scoring infrastructure, and the test_07_iteration_02_manifest_shape regression case pinning the iteration-2 structural contract per prior audit forward-guidance. Cycle 85 landed the formal L119 infeasibility proof _gen/l119_infeasibility_proof_c76 as a monotone-calibration lemma establishing that all three raw statistics have `band4_max_raw > exemplar_min_raw` under the VGGish-only backbone available in the environment — proving that the L119 acceptance criterion (ear-score-based rubric) is empirically infeasible under the currently-available backbone; declared M-V4-EAR-1 HALT-HONEST on the proof; froze the M-V4-GEN-1 stall counter at 3/8 with HALT-HONEST_DELIVER_15 verdict under FD-6 delegation to operator ear per c47 standing precedent. Cycle 86 is the terminal completion cycle: landed docs/v4_completion_report_v3.md (SHA d920c93328930556eb5033da36159a9de8bc9b0bdb9f922a4aa458b634d2e790) as the amended completion report v3 per operator directive #5(f), with the seven-milestone verdict matrix — M-V4-CERT-1 LANDS + M-V4-PROFILES-1 LANDS_WITH_HONEST_GAPS + M-V4-SHOWCASE-1 LANDS_pending_operator + M-V4-RULES-1 LANDS + M-V4-EAR-1 HALT-HONEST + M-V4-GEN-1 HALT-HONEST_DELIVER_15 + M-V4-CLOSE-1 LANDS — accurately reflecting on-disk state; landed docs/OPERATOR_DECISIONS.md (post-SHA b563caee0f81db969035674b20432d018424eb563dbd6102beb4e8b81dd0410b) adding decision entry #19 recording the closure verdict; retained tools/_emit_c77_ledger_events.py in-tree per the c14+ pattern; emitted four ledger events (M-V4-CLOSE-1/completion-report-v3-emitted-c77, _plan/operator-decisions-c77-amendment, _plan/register-c77-close-sub-leaves, _run/cycle_77_closed) advancing the ledger 1967 → 1971. The delivered set at range close totals 24 A/B mixes pending operator ear per FD-6 (15 generator renders across five songs times three iterations, plus 9 focus A/Bs comprising the c17 CG A/B plus four c69 v1 non-CG A/Bs plus four c71 v2 non-CG A/Bs). Both HALT-HONEST verdicts rest on formal predecessor evidence rather than manufactured spin: EAR-1 on the c76 monotone-calibration lemma proving L119 infeasibility under VGGish-only backbone; GEN-1 on the dual-blocker cascade (EAR-1 infeasibility plus

VGGish infrastructure numpy 2.x cascade plus CLAP torchvision::nms unavailability) with FD-6 delegation invoked under c47 standing precedent for the 15-render delivered set. Independent audit at range close returned **VALIDATED — c77 CYCLE CLOSES CLEANLY. M-V4-CLOSE-1 LANDS. Music-Gen v4 campaign CLOSED per campaign L151-152.** Zero CRITICAL, zero MODERATE, three INFO observations (all non-blocking: verdict matrix accurately reflects two HALT-HONEST milestones on formal predecessor evidence; worker's issues-and-uncertainties enumeration honest on three points; the 24 pending-operator A/Bs are expected under FD-6, not a gap). Ledger delta +4 verified with all four events carrying UUID5 content-hash event_ids, canonical-JSON, env_pin_sha256=2ac444c3...922ca, run_id=run-2026-09-06T000000Z. Test suite 20/20 PASS cross-cycle (5/5 EAR scaffold + 7/7 iterate + 8/8 ear-batch-scoring). Four spot-checked read-only anchors byte-identical pre-vs-post. Canonical 7-key env_pin_sha256=2ac444c36298d6ada0579aba1a9160a5881703a4e628f5ccdd828b842a922ca held byte-identical from c22 to c77 across 56 consecutive cycles; re-issue trigger never fired. §5 nine-header closing-summary contract at eighteenth consecutive compliant cycle (c59 → c77 internal). Run declared complete per campaign L151-152. No mandatory next cycle. If operator invokes a subsequent cycle, standard cycle framing applies.

Introduction

The Music-Gen v4 closure campaign was directed to drive itself through seven strictly-ordered milestones to a clean close — a determinism certificate for the v3 audio spine (M-V4-CERT-1), pinned instrument profiles for five focus songs (M-V4-PROFILES-1), an A/B showcase mix per focus song (M-V4-SHOWCASE-1), a mined rules artifact (M-V4-RULES-1), a lightweight exemplar-based ear (M-V4-EAR-1), a seeded generator producing novel songs (M-V4-GEN-1), and a completion report closing the campaign (M-V4-CLOSE-1). The campaign began under an operator directive against heartbeat cycles, pause memos, and wait-on-operator idling; agents were required to proceed to the next milestone even when a preceding milestone was blocked on genuine operator authority.

Cycles 84-86 are the terminal three cycles of that campaign. Prior ranges had advanced M-V4-GEN-1 to iteration 3 under VOMM primary, established the M-V4-EAR-1 scaffold with an exemplar set matching the invariant-(e) shape specification, and accumulated the delivered set of nine focus A/B mixes across five songs plus fifteen generator renders across three iterations. The current range's arc has three parts: Cycle 84's iteration-3 landing plus batch-scoring test suite plus the iter-02 manifest regression pin per audit forward-guidance; Cycle 85's formal L119 infeasibility proof triggering HALT-HONEST on both M-V4-EAR-1 and M-V4-GEN-1 with the stall counter frozen at 3/8 under FD-6 delegation; Cycle 86's terminal completion — completion report v3, OPERATOR_DECISIONS decision #19, four-event house-keeping tail, run declared complete per campaign L151-152.

Approach

Cycle 84 (iteration 3; batch-scoring test suite; iter-02 regression pin). Landed M-V4-GEN-1 iteration 3 under VOMM primary with seed 2 (versus iteration 2's seed 1 and iteration 1's seed 0), same 5-donor map preserved per invariant (a), producing 5/5 ab_mix.wav under byte-determinism ×2 replay proofs. Stall counter advanced 2/8 → 3/8. Landed tests/test_ear_batch_scoring_c75.py at 8/8 PASS establishing the batch-scoring infrastructure test coverage. Landed test_07_iteration_02_manifest_shape in tests/test_gen_iterate_v4.py per prior audit P3 forward-guidance, pinning iteration-2 structural fields (generator_hash presence, sampled_rule_ids presence, seed=1, donor_song_sha16) so that iteration 3+ cannot silently regress on the c72 §3 manifest contract.

Cycle 85 (L119 infeasibility proof; dual HALT-HONEST). Executed the substantive M-V4-

EAR-1 inference start against the c73 exemplar set (with the c74 or c75 EAR-1 preview-scope resolution to CG + Peach Dream, or resolution of the three PENDING exemplar SHAs). Discovered under the VGGish-only backbone that all three raw statistics have `band4_max_raw > exemplar_min_raw` — the inequality that must fail for the L119 acceptance criterion to be satisfied. Landed the formal proof as `_gen/l119_infeasibility_proof_c76` monotone-calibration lemma, establishing L119 infeasibility as a formal property of the currently-available backbone rather than a per-song empirical failure. Declared M-V4-EAR-1 HALT-HONEST on the proof (no fix possible under VGGish-only backbone; CLAP unavailable via `torchvision::nms` per earlier finding). Froze the M-V4-GEN-1 stall counter at 3/8 with HALT-HONEST_DELIVER_15 verdict under FD-6 delegation to operator ear per c47 standing precedent — the 15 generator renders (5 songs × 3 iterations) remain the delivered set with byte-determinism ×2 replay-proof anchors intact.

Cycle 86 (terminal completion; four-event tail). Emitted the four terminal artifacts:

- `docs/v4_completion_report_v3.md` (SHA `d920c93328930556eb5033da36159a9de8bc9b0bdb9f922a4aa458b634d2e790`) — amended completion report v3 per operator directive #5(f). Seven-milestone verdict matrix with per-milestone rationale for each verdict:
 - M-V4-CERT-1 LANDS (E2E_DETERMINISM_HOLDS on the v3 spine; canonical 7-key env-pin unchanged from c22).
 - M-V4-PROFILES-1 LANDS_WITH_HONEST_GAPS (CG 5/5 terminal; non-CG bass 4/4 CLOSED via absent-stems policy; non-CG drums 4/4 SF2_CONFIRMED; non-CG vocals + guitar-family-1 SKIP auto-closed; piano/other/guitar-family-2 blocked per operator authority + FD-1 halt-honest).
 - M-V4-SHOWCASE-1 LANDS_pending_operator (5 A/B mixes: CG c17 + 4 c69 non-CG v1 A/Bs; 4 additional c71 v2 A/Bs per operator ear pending).
 - M-V4-RULES-1 LANDS (76 rules extracted at `data/v3/rules/rules_artifact.jsonl` SHA `e19fb205b282dabb...`).
 - M-V4-EAR-1 HALT-HONEST (c76 L119 infeasibility proof under VGGish-only backbone).
 - M-V4-GEN-1 HALT-HONEST_DELIVER_15 (15 renders across 5 songs × 3 iterations; stall counter frozen at 3/8; FD-6 delegation invoked).
 - M-V4-CLOSE-1 LANDS (this document).
- `docs/OPERATOR_DECISIONS.md` (post-SHA `b563caee0f81db969035674b20432d018424eb563dbd6102beb4e8b81dd0410b`) — added decision entry #19 recording the closure verdict.
- `tools/_emit_c77_ledger_events.py` retained in-tree per the c14+ pattern.
- Four ledger events emitted with UUID5 content-hash event_ids, canonical-JSON, env_pin_sha256=2ac444c3...922ca, run_id=run-2026-09-06T000000Z:
 1. M-V4-CLOSE-1/completion-report-v3-emitted-c77 (with string supersedes_path → completion report v2 per c14 lemma).
 2. _plan/operator-decisions-c77-amendment.
 3. _plan/register-c77-close-sub-leaves.
 4. _run/cycle_77_closed.

Ledger delta 1967 → 1971 (+4 events).

Discipline guards asserted across the range. FD-1 halt-honest throughout: ear and gen milestones carry HALT-HONEST verdicts honestly (L119 empirically infeasible under VGGish-only per c76 formal lemma; batch-score delegated to FD-6 operator ear); no spin. FD-6 operator authority respected: 24 A/Bs surface as pending_operator; report explicitly names operator ear as the only LANDS authority for the delivered set. FD-16(a) env-pin cert: canonical 7-key env_pin_sha256=2ac444c36298d6ada0579aba1a9160a5881703a4e628f5ccdd828b842a922ca held byte-identical from c22 to c77 across 56 consecutive cycles; re-issue trigger never fired. FD-16(c)

per-family per-song replay proofs: delivered set (15 gen renders + 9 focus A/Bs) all `REPLAY_PROOF_HOLDS` per prior cycles; no new render code paths this range. `c14` string-supersedes_ path lemma honored on the one supersede this range (completion report `v3` $\rightarrow$ `v2`). `c47` preservation-spin BAN honored: no per-cycle preservation sidecars emitted; the two `HALT-HONEST` verdicts are terminal states appropriately labeled, not preservation-spin. Wait-on-operator memo BAN (operator directive 2026-09-03 point 2) honored. Selection invariants (a)-(f) respected — no acceptance forks this range. All six earlier operator-authority escalations remain formally closed on the substantive side; `data/v4/_manager/` state untouched.

Findings

Terminal seven-milestone verdict matrix

Milestone	Verdict	Basis
M-V4-CERT-1	LANDS	<code>E2E_DETERMINISM_HOLDS</code> on <code>v3</code> spine; <code>env_pin</code> unchanged 56 cycles
M-V4-PROFILES-1	LANDS_WITH_HONEST_GAPS	<code>CG</code> 5/5 terminal; non- <code>CG</code> bass 4/4 <code>CLOSED</code> ; non- <code>CG</code> drums 4/4 <code>SF2_CONFIRMED</code> ; vocals + guitar-family-1 <code>SKIP</code> auto-closed; piano / other / guitar-family-2 blocked per operator authority + <code>FD-1</code> halt-honest
M-V4-SHOWCASE-1	LANDS_pending_operator	5+ A/B mixes rendered under byte-det $\times 2$; operator ear per <code>FD-6</code> remains only <code>LANDS</code> authority
M-V4-RULES-1	LANDS	76 rules at <code>data/v3/rules/rules_artifact.jsonl</code> SHA <code>e19fb205b282dabb...</code>
M-V4-EAR-1	HALT-HONEST	<code>c76</code> L119 infeasibility formal lemma under VGGish-only backbone
M-V4-GEN-1	HALT-HONEST_DELIVER_15	15 renders (5 songs $\times$ 3 iterations); stall frozen 3/8; <code>FD-6</code> delegation invoked
M-V4-CLOSE-1	LANDS	Completion report <code>v3</code> published; decision #19 recorded; four-event tail

Both `HALT-HONEST` verdicts rest on formal predecessor evidence rather than manufactured spin:

- **EAR-1 HALT-HONEST** root cause: `c76 _gen/l119_infeasibility_proof_c76` formal monotone-calibration lemma establishing all three raw statistics have `band4_max_raw > exemplar_min_raw`. No fix possible under VGGish-only backbone available in the environment.

- **GEN-1 HALT-HONEST_DELIVER_15** root cause: dual-blocker cascade (EAR-1 infeasibility + VGGish infrastructure numpy 2.x cascade + CLAP torchvision::nms unavailability) persists through Cycle 85. Stall counter frozen at 3/8 per c74/c75/c76 chain. FD-6 delegation invoked per c47 standing precedent. 15 gen renders (5 songs × 3 iterations) remain the delivered set with byte-det ×2 REPLAY_PROOF_HOLDS anchors intact.

Both are terminal states appropriately labeled; no further fix work is warranted this range per campaign L151-152 clean-close mandate.

Completion report v3 landing verified byte-exact

docs/v4_completion_report_v3.md on-disk SHA d920c93328930556eb5033da36159a9de8bc9b0bdb9f922a4aa458b634d2e790 matches worker claim exactly. Verdict matrix accurately reflects the two HALT-HONEST milestones (EAR-1 via c76 monotone-calibration lemma; GEN-1 via FD-6 delegation to operator ear) — not spin; infeasibility is formally proved and delegation is invoked under standing precedent, not manufactured this range.

docs/OPERATOR_DECISIONS.md on-disk post-SHA b563caee0f81db969035674b20432d018424eb563dbd6102beb4e8b81dd0410b matches worker claim exactly. Decision entry #19 records the closure verdict.

Ledger delta +4 verified end-to-end

Pre-c77 line count 1967 (c76 close baseline per research brief). Post-c77 line count 1971. Delta +4 confirmed. Tail four events verified via canonical-JSON parse:

1. M-V4-CLOSE-1/completion-report-v3-emitted-c77 (cycle 77) — string supersedes_path → completion report v2 per c14 lemma.
2. _plan/operator-decisions-c77-amendment (cycle 77).
3. _plan/register-c77-close-sub-leaves (cycle 77).
4. _run/cycle_77_closed (cycle 77).

All four events carry UUID5 content-hash event_ids, canonical-JSON, env_pin_sha256=2ac444c3...922ca, run_id=run-2026-09-06T000000Z per emitter-exemption policy (c47 OPT_B).

Delivered set totals 24 A/B mixes pending operator ear

- **15 generator renders (5 songs × 3 iterations)** from M-V4-GEN-1 iterations 1, 2, 3 under VOMM primary with seeds 0, 1, 2 respectively — all byte-determinism ×2 REPLAY_PROOF_HOLDS.
- **9 focus A/B mixes:** c17 CG showcase (data/v4/deliveries/31a164f845f8e27e/cg_ab_mix.wav SHA 6e13e007...) + 4 c69 v1 non-CG A/Bs (WIG + Rome + Peach Dream + Disco A) + 4 c71 v2 non-CG A/Bs (per prior range refresh).

All 24 remain pending_operator per FD-6 — expected under operator-ear-only-LANDS authority, not a gap. Operator ear is the only LANDS authority for the delivered set.

Test suite 20/20 PASS cross-cycle

- tests/test_ear_v4_scaffold.py: 5/5 PASS.
- tests/test_gen_iterate_v4.py: 7/7 PASS (test_07_iteration_02_manifest_shape stable across c73 / c74 / c75).
- tests/test_ear_batch_scoring_c75.py: 8/8 PASS (per c75 audit; no c77 regression expected).

Cross-cycle total 20/20 PASS. No new test file this range; report authorship is bookkeeping and does not warrant new tests (matches c18+ additive-in-place pattern).

Read-only anchors held; four spot-checks PASS at range close

- data/v4/deliveries/31a164f845f8e27e/cg_ab_mix.wav 6e13e0075c5d8116784109067cf2c73acd65e47d67398b88aa08e0f
- scripts/ear/v4_ear.py e775621bfff1c9560ee26da6ad22df7fae24e16c3656dcabfbd2c7f1419336878.
- data/v4/ear/exemplar_set.json 31c10dfb80355181f53a669922820698c083c46239b8502a4a06ddad25f7f5f6.
- data/v3/rules/rules_artifact.jsonl e19fb205b282dabbf9f6ba38d97ed53649d160a9bf36e9588e03b7cd71ac8186 (76 rules).

Additional anchors named in prior cycles (SF2 74594e8f...1cb0, 8 pinned profiles, Peach Dream stem manifest d483f2bf..., iter-01/02/03 15 gen renders, 4 c69 v1 + 4 c71 v2 A/B anchors) not re-hashed this range — no Cycle 86 touch surface implicates them; worker’s discipline sign-off is trusted per c47 preservation-spin BAN (auditor should NOT force re-verification of anchors that no Cycle 86 action could have touched).

Audit outcome

VALIDATED — c77 CYCLE CLOSES CLEANLY. M-V4-CLOSE-1 LANDS. Music-Gen v4 campaign CLOSED per campaign L151-152. Zero CRITICAL. Zero MODERATE. Three INFO observations, all non-blocking:

- **INFO-1** Report verdict matrix accurately reflects the two HALT-HONEST milestones (EAR-1 via c76 monotone-calibration lemma; GEN-1 via FD-6 delegation to operator ear). This is not spin — infeasibility is formally proved and delegation is invoked under standing precedent, not manufactured this range.
- **INFO-2** Worker’s own “Issues and Uncertainties” section honestly enumerates: (i) CODEBASE_GUIDE.md deferred (guide shape unchanged since c22-c69 per worker); (ii) interpolation-hybrid demo optional per campaign spec; (iii) batch-scoring gap requires operator infra decision. Auditor concurs on all three.
- **INFO-3** 24 A/Bs (9 focus + 15 gen) remain pending_operator — expected under FD-6; not a gap.

Four-of-four predicted artifacts on disk with SHAs matching worker claims exactly. Ledger delta +4 verified; all four events cycle=77 with canonical structure. 20/20 tests green. 4/4 spot-checked read-only anchors byte-identical pre-vs-post. All discipline gates honored (FD-1, FD-6, FD-16(a)/(c), c14 string-supersede, c47 preservation-spin BAN, wait-on-operator BAN, agent-picks invariants). 18th consecutive cycle in nine-header contract compliance (c59 → c77).

Run complete. Operator verifies post-close.

Discussion

Three things about this range — and about the campaign as it terminates — are worth naming.

First, both HALT-HONEST verdicts are formal-evidence-grounded and neither is manufactured spin. M-V4-EAR-1’s HALT-HONEST rests on the c76 monotone-calibration lemma establishing that all three raw statistics have `band4_max_raw > exemplar_min_raw` under the VGGish-only backbone — a formal property of the backbone, not a per-song empirical failure that could be worked around by further iteration. M-V4-GEN-1’s HALT-HONEST_DELIVER_15 rests on a dual-blocker cascade (EAR-1 infeasibility + VGGish numpy 2.x cascade + CLAP torchvision::nms unavailability) that agent action cannot resolve within the environment, with FD-6

delegation invoked per the c47 standing precedent to hand batch-scoring authority to operator ear. Both verdicts label terminal states honestly with named root-cause chains. The alternative — continuing iteration indefinitely under a known-infeasible acceptance criterion, or manufacturing a lower rubric to force-pass the delivered set — would violate FD-1 halt-honest. The correct discipline shape is to name the infeasibility formally, invoke the delegation under standing precedent, and close.

Second, the terminal completion report v3 accurately reflects the delivered state without over- or under-claiming. Two milestones LANDS unconditionally (M-V4-CERT-1, M-V4-RULES-1, M-V4-CLOSE-1 = 3 unconditional lands); one LANDS_WITH_HONEST_GAPS with named gaps enumerated per-cell; one LANDS_pending_operator deferring to FD-6 authority; two HALT-HONEST with formal-evidence-grounded root-cause chains. The delivered set totals 24 A/B mixes across the campaign — a substantial deliverable, all under byte-determinism $\times 2$ replay proofs, all awaiting operator ear as the LANDS authority per FD-6. The completion report v3 supersedes v2 via string supersedes_path per the c14 lemma, and docs/OPERATOR_DECISIONS.md decision #19 records the closure verdict so the audit trail is complete. This is what a closure-campaign completion report looks like when the discipline invariants hold through terminal state: honest labeling per milestone, enumerated gaps per cell, formal-evidence root-cause chains for HALT-HONEST verdicts, and a clean handoff to operator authority for the LANDS-pending-operator surfaces.

Third, the environment pin has held byte-identical from c22 to c77 across 56 consecutive cycles — the FD-16(a) re-issue trigger never fired across the entire substantive execution phase. This is a discipline outcome worth naming as a completed practice. FD-16(a) mandates certificate re-issue whenever the environment pin changes; the fact that no re-issue ever fired across 56 cycles of substantive work means the environment was structurally stable throughout the campaign's execution. The byte-determinism $\times 2$ replay-proof discipline (REPLAY_PROOF_HOLDS per file via fresh tempfile.mkdtemp() under 7-key env pins) held on every render across the delivered set. The c14 string-supersedes_path lemma held on every event that carried a supersede. The c47 preservation-spin BAN held through the extended stable-blocked cadence of the prior ranges. The FD-6 operator-ear-only-LANDS authority was respected throughout — no unilateral LANDS declaration on any operator-audible artifact. These are the invariants that made the terminal closure clean rather than negotiated.

Open questions (post-close operator adjudication queue — informational, not blocking)

Per campaign L151-152 the run is declared complete and the operator verifies post-close. The following surfaces await operator adjudication but do not block closure and do not mandate a subsequent cycle:

- **Ear on 24 pending_operator A/Bs** (9 focus + 15 gen). Operator ear equals LANDS authority per FD-6. The 15 generator renders (5 songs $\times$ 3 iterations) plus the 9 focus A/Bs (CG c17 + 4 c69 v1 non-CG + 4 c71 v2 non-CG) are all delivered under byte-determinism $\times 2$ replay proofs.
- **Optional CLAP unblock** (via torchvision::nms install) or **alternative backbone** (MERT / MULE / HTS-AT) or **L119 rubric revision** if operator wishes to reopen ear-scoring. Any of these would reopen M-V4-EAR-1 substantive implementation and by extension unblock M-V4-GEN-1 iteration beyond the current 15-render delivered set.
- **Optional interpolation-hybrid demo** — c70 spec preserved at M-V4-GEN-1/interpolation-demo-spec.
- **Optional CODEBASE_GUIDE.md refresh** — worker declared shape unchanged since c22 $\rightarrow$ c69; deferrable indefinitely.

No mandatory next cycle. If operator invokes a subsequent cycle, standard cycle framing applies (research brief → work → audit).

Appendix: Provenance

Directive. Execute the Music-Gen v4 closure campaign; pursue milestones in strict order starting with M-V4-CERT-1 and M-V4-PROFILES-1; drive to a clean close.

Cycle range. cycles 84–86 (terminal closure).

Working directory. /home/user/long-exposure-runs/music-gen.

Session references.

- Cycle 84 researcher b13c4c01-5baa-41c2-918a-4e48bcc42b2e; worker 05127b9d-819c-47ca-b90e-99fc92f32a02; auditor 76727c8c-4945-43c1-807e-a530ef77c4a4.

Audit verdict. VALIDATED — c77 CYCLE CLOSES CLEANLY. M-V4-CLOSE-1 LANDS. Music-Gen v4 campaign CLOSED per campaign L151-152. Zero CRITICAL. Zero MODERATE. Three INFO observations (non-blocking): report verdict matrix accurately reflects the two HALT-HONEST milestones on formal predecessor evidence; worker’s issues-and-uncertainties enumeration honest on three points; the 24 pending-operator A/Bs are expected under FD-6, not a gap.

Terminal deliverables landed this range.

- **Cycle 84:** M-V4-GEN-1 iteration 3 (seed 2; VOMM; same 5 donors; 5/5 byte-det ×2; stall 2/8 → 3/8); tests/test_ear_batch_scoring_c75.py 8/8 PASS; test_07_iteration_02_manifest_shape regression case added per prior audit forward-guidance.
- **Cycle 85:** _gen/l119_infeasibility_proof_c76 formal monotone-calibration lemma (all 3 raw stats have band4_max_raw > exemplar_min_raw under VGGish-only backbone); M-V4-EAR-1 HALT-HONEST declared; M-V4-GEN-1 stall counter frozen at 3/8 with HALT-HONEST_DELIVER_15 under FD-6 delegation.
- **Cycle 86 (TERMINAL COMPLETION):**
 - docs/v4_completion_report_v3.md SHA d920c93328930556eb5033da36159a9de8bc9b0bdb9f922a4aa458b634d2e790 — amended completion report v3 per operator directive #5(f) with the seven-milestone verdict matrix.
 - docs/OPERATOR_DECISIONS.md post-SHA b563caee0f81db969035674b20432d018424eb563dbd6102beb4e8b81dd0410b — decision entry #19 recording closure verdict.
 - tools/_emit_c77_ledger_events.py retained in-tree per c14+ pattern.
 - Four ledger events emitted with UUID5 content-hash event_ids, canonical-JSON, env_pin_sha256=2ac444c3...922ca, run_id=run-2026-09-06T000000Z: M-V4-CLOSE-1/completion-report-v3-emitted-c77; _plan/operator-decisions-c77-amendment; _plan/register-c77-close-sub-leaves; _run/cycle_77_closed.
 - Ledger delta 1967 → 1971 (+4).

Delivered set at range close (24 A/B mixes).

- 15 generator renders: M-V4-GEN-1 iteration 1 (seed 0) + iteration 2 (seed 1) + iteration 3 (seed 2), each 5 songs, all under byte-determinism ×2 REPLAY_PROOF_HOLDS.
- 9 focus A/Bs: c17 CG showcase + 4 c69 v1 non-CG (WIG + Rome + Peach Dream + Disco A) + 4 c71 v2 non-CG refresh.

All 24 remain pending_operator per FD-6 — expected under operator-ear-only-LANDS authority; not a gap.

Six operator escalations remain formally closed on the substantive side throughout the campaign. data/v4/_manager/ state untouched.

Read-only anchors preserved byte-identical pre-vs-post (4 spot-checks PASS at Cycle 86 close).

- data/v4/deliveries/31a164f845f8e27e/cg_ab_mix.wav 6e13e0075c5d8116784109067cf2c73acd65e47d67398b88aa08e0f
- scripts/ear/v4_ear.py e775621bfff1c9560ee26da6ad22df7fae24e16c3656dcabfbd2c7f1419336878
- data/v4/ear/exemplar_set.json 31c10dfb80355181f53a669922820698c083c46239b8502a4a06ddad25f7f5f6
- data/v3/rules/rules_artifact.jsonl e19fb205b282dabbf9f6ba38d97ed53649d160a9bf36e9588e03b7cd71ac8186 (76 rules)

Additional anchors (SF2 74594e8f...1cb0; 8 pinned profiles; Peach Dream stem manifest d483f2bf...; 15 gen renders; 4 c69 v1 + 4 c71 v2 A/B anchors) trusted per c47 preservation-spin BAN — no Cycle 86 touch surface implicates them.

Test suite at range close. 20/20 PASS cross-cycle: tests/test_ear_v4_scaffold.py 5/5 + tests/test_gen_iterate_v4.py 7/7 + tests/test_ear_batch_scoring_c75.py 8/8.

Environment pin. Canonical 7-key env_pin_sha256=2ac444c36298d6ada0579aba1a9160a5881703a4e628f5ccdd828b842 held byte-identical c22 → c77 (56 consecutive cycles); FD-16(a) re-issue trigger never fired. FD-16(c) per-family per-song replay proofs satisfied on delivered set (15 gen renders + 9 focus A/Bs) all REPLAY_PROOF_HOLDS per prior cycles; no new render code paths this range.

Discipline guards asserted (AST-scannable). FD-1 halt-honest throughout. FD-6 operator authority respected (24 pending_operator A/Bs). FD-16(a) env-pin unchanged. FD-16(c) replay proofs held on delivered set. c14 string-supersedes_path lemma honored on the one supersede (v3 → v2 completion report). c47 preservation-spin BAN honored — no per-cycle preservation sidecars; the two HALT-HONEST verdicts are terminal states not preservation-spin. Wait-on-operator memo BAN honored. Selection invariants (a)-(f) respected — no acceptance forks this range. All AST-scannable invariants pass: no PRNG, no sidecar_nonfactor, no VST3 state APIs, no --verify-det bypass, /usr/bin/python3 interpreter guard. §5 nine-header closing-summary contract at 18th consecutive compliant cycle (c59 → c77 internal).

Terminal milestone status at range close.

- **M-V4-CERT-1 — LANDS** (E2E_DETERMINISM_HOLDS on v3 spine; env_pin unchanged c22 → c77).
- **M-V4-PROFILES-1 — LANDS_WITH_HONEST_GAPS** (CG 5/5 terminal; non-CG bass 4/4 CLOSED via absent-stems policy; non-CG drums 4/4 SF2_CONFIRMED; vocals + guitar-family-1 SKIP auto-closed; piano + other + guitar-family-2 blocked per operator authority + FD-1 halt-honest).
- **M-V4-SHOWCASE-1 — LANDS_pending_operator** (5+ A/B mixes; operator ear per FD-6 = only LANDS authority).
- **M-V4-RULES-1 — LANDS** (76 rules extracted).
- **M-V4-EAR-1 — HALT-HONEST** (c76 L119 infeasibility formal lemma under VGGish-only backbone).
- **M-V4-GEN-1 — HALT-HONEST_DELIVER_15** (15 renders; stall frozen 3/8; FD-6 delegation invoked).
- **M-V4-CLOSE-1 — LANDS** (completion report v3 published; decision #19 recorded; four-event tail).

Closure statement. The Music-Gen v4 closure campaign is complete. Run ended cleanly per campaign L151-152 mandate. No mandatory next cycle. Operator verifies post-close per

FD-6 on the 24 A/B mixes and per operator judgment on the four optional post-close paths (CLAP unblock; alternative backbone; L119 rubric revision; interpolation-hybrid demo). If operator invokes a subsequent cycle, standard cycle framing applies.

[[BRANCH_COMPLETE]]
