Cycles 1-3 Clone 0 Report — M-EAR-1/real-label-training-v0 (Fork 87da4f517029)

Abstract

Cycles 1-3 of clone-0 (fork 87da4f517029) open M-EAR-1/real-label-training-v0 — the first real-label ear-model training pass on the 43-song rated corpus the operator delivered (10 band-4 + 10 band-5 + 13 band-6 + 10 band-7 across corpus/ratings/{4,5,6,7}/*.mp3 per RECEIPTS.md sha manifests). This fires the pre-registered Path B plan from c26. The milestone is **in-progress at CONTINUE**: rubric frozen, report skeleton landed at the required path, PANNs feature extraction restarted under nohup setsid supervision after a silent-halt incident, and running at ~213 s/song (ETA ~2 h from cycle-3 restart at 06:00 UTC; 11/43 songs cached). SB1/SB2/SB3 numbers are placeholders pending extraction completion. Auditor decision at cycle 3: **CONTINUE** with a light-touch nudge to close the deferred cache-regeneration-determinism half.

Verdict

IN-PROGRESS (three cycles: pre-registration + null Hold Pattern + substantive-with-restart; auditor **CONTINUE** at cycle 3). Verdict EAR_v0_LANDS / EAR_v0_PARTIAL / EAR_v0_INSUFFICIENT

unresolved pending SB1/SB2/SB3 computation on completed features.

Rubric SHA Anchor

Location	SHA-256
docs/ear_v0_real_label_training_rubric.md	636c2cd0...1bb2e9
data/ear_v0/rubric_hash.txt	636c2cd0...1bb2e9
Rubric-mtime-before-scripts (git-log fallback)	verified at cycle 1

Three SB thresholds cited in report §2: - **SB1**: MAE beats min(majority-class, mean-integer) by margin > cycle-22 recipe-envelope-IQR **0.5909**. - **SB2**: mean pairwise Kendall $\tau \geq \mathbf{0.4}$ across 10 stratified bootstrap resamples (c23 threshold). - **SB3**: leak-test detection $\geq \mathbf{0.90}$ at $\alpha=1.0$ (c6 protocol).

Cycle Disposition

Cycle	Researcher Directive	Worker Action	Auditor Decision
1	Pre-register rubric + scaffolding	Rubric frozen; scripts scaffolded under scripts/ear_v0/; test scaffolding + data/ear_v0/rubric_hash.txt landed; ledger events 1-3 emitted (_run/...-launched, _plan/...-rubric-frozen, _infra/...-egress-probe)	VALIDATED-in-progress
2	Substantive advance	NULL Hold Pattern ("check if it finished yet"); auditor flagged coupling and orthogonal-deliverable rule	CONTINUE with strong nudge

Cycle	Researcher Directive	Worker Action	Auditor Decision
3	Break Hold Pattern; land ≥ 1 orthogonal deliverable	Report skeleton at required path with operator-critical §1 caveat verbatim; extraction restarted detached (nohup setsid PID 20291, heartbeat TSV, data/ear_ v0/extract3.log); feature-cache manifest emitter smoke-tested; anchor-preservation snapshot script landed as spec; extraction advancing 8 $\rightarrow$ 11 songs at 213 s/song	CONTINUE (light-touch)

Report Skeleton (Landed at Required Path)

docs/ear_v0_real_label_training_report.md present with the exact structure the brief specified:

- **§1 Operator-critical preview_partial_corpus_v0 caveat** (verbatim): scale_bounds {4, 7} absent [1, 2, 3]; 43/80 = 54% of c26 Path B target; class imbalance 10/10/13/10; genre = deferred_aliased_with_band (playlist_id aliased with rating band in this corpus); era = deferred_no_metadata (post-yt-dlp-metadata cycle).
- **§2 Rubric SHA + three SB thresholds** cited above.
- **§4 [TBD-post-training: ...] placeholders** for SB1/SB2/SB3 numeric results.
- **§5 Two-path c37 handoff** (see below).
- **§6 Infra handoff** for silent-background-job supervision pattern.

Ledger Events (6 Shadow Rows Under -clone-0 Suffix; Closing 5 Owed by Completion Cycle)

1. _run/cycle_36_launched-clone-0 (status: validated per c35 Branch C codified convention)
2. _plan/ear_v0_real_label_training_rubric_frozen-clone-0
3. _infra/egress-probe-cycle-36-clone-0 (media_ok=false, http_code=403 — rated audio is on-disk; egress probe non-blocking per usual)
4. M-EAR-1/real-label-training-v0 (in-progress; M-* unsuffixed per c32; NOT validated — SB evaluation has not run)
5. _infra/feature-cache-manifest-emitter-clone-0 (landed + smoke-tested)
6. _manager/background-job-supervision-clone-0 (in-progress; durable handoff for silent-background-job failure mode)

Closing 5 events owed by completion cycle: milestone-validated verdict roll-up; cross-branch §57 extension; plan-register-if-owed; _run/cycle_36_closed-clone-0; housekeeping pair (_archive/cycle-36-scratch-clone-0, _infra/adopt-cycle36-tests-clone-0).

No M-EAR-1/* events beyond the milestone row itself; no M-GEN-1/* events. c31 STILL_GAP and

c35 A anti-patterns not re-opened.

Extraction Liveness

- **Current progress:** 11/43 songs cached (advancing 8 → 11 during cycle 3).
- **Rate:** 213 s/song measured; NOT below the pathological 5 min/song threshold.
- **ETA:** ~2 h from cycle-3 restart at 06:00 UTC.
- **Supervision:** nohup setsid wrapper with periodic heartbeat to data/ear_v0/extraction_liveness.tsv; stdout to data/ear_v0/extract3.log. This is the second silent-halt in the campaign (n=2: c31 fixture, c36 extraction) and the correct fix pattern per prior audit.

MODERATE Findings (Owed by Next Cycle)

1. **Cache-regeneration-determinism deferred half:** cache-hit determinism verified this cycle (bytes SHA-equal to on-disk .npy); regeneration-determinism deferred. Brief called for: cp a .npy aside, delete original, re-invoke extractor on that song, assert fresh output SHA-256 == saved copy. Next cycle: pick one of the 11 cached songs, execute the regeneration half; if unequal, this is CRITICAL — the byte-determinism $\times 2$ gate will fail at completion, and _manager/feature-pipeline-regeneration-nondeterminism-clone-0 should open immediately with observed diff (SHA-A vs SHA-B, torch/BLAS pin state, numpy version).
2. **Anchor-preservation snapshot test coverage:** script ships un-executed as designed, but brief §4 called for “covered by ≥ 2 tests in the existing test file.” Next cycle: add tests to tests/test_ear_v0_real_label_training.py (one invocation on current tree returns non-empty JSON with unchanged field; second test asserts boolean flips when a fixture anchor file is perturbed). Cheap; unblocks completion pass.

MINOR Observations

- _manager/background-job-supervision-clone-0 narrative should spell out the worker-side orthogonal-deliverable rule (a cycle spawned alongside a supervised background job MUST land ≥ 1 named on-disk deliverable orthogonal to the job’s output before it may sleep/exit) — verbatim recommendation from cycle-3 auditor.

Deferrals Correctly Documented (Not Verdict-Impairing)

- **Genre column:** deferred_aliased_with_band — playlist_id is aliased with rating band in this corpus, so genre remains unseparable-from-signal for this run; c26 §4 authorizes.
- **Era column:** deferred_no_metadata — pending post-yt-dlp-metadata cycle.
- **80-song target:** this is preview_partial_corpus_v0 (54% of c26 Path B target); operator explicitly accepted this as first-class deliverable, NOT calibrated to full 80-song target. Caveat prominent in report §1.

Standing Constraints (Unchanged)

- α pinned at 0.7469387071101908.
- SHA-256 tiebreak; no PRNG (AST-verified); no sidecar_nonfactor imports; no live network.
- Interpreter guard assert sys.executable == '/usr/bin/python3' on every new script.
- Read-only anchors preserved: c6 feature cache; c22 stability harness; c26 Path B commitment doc; c34 palette_v2; c33 palette_render; c35 palette_v2_render.
- c15 i4_stratified.py NOT imported.
- Non-factor sidecar isolation contract preserved (AST-grep).
- Rated audio egress-blocked at *.googlevideo.com (unchanged 403; probe non-blocking).

- Ledger hygiene: narrative field; run_id="run-2026-08-28T040704Z"; nested confidence:{level,rationale,asses
UUID5 content-hash event_id.

Anti-Patterns Locked (6-Count Stable)

c8 octave-suppression; c11 CLAP/VGGish embedding; c22 stability; c23 head-reg; c25 feature-representation — not re-attempted. c35 Branch A VST3-nondeterminism finding survives as fair characterization. c22/c23/c25 anti-patterns NOT re-opened per audit standing note.

State-Machine Discipline (c29 Lemma Respected)

M-EAR-1/real-label-training-v0 is a peer sub-milestone under M-EAR-1. NOT a child of terminal-validated _manager/M-EAR-1-path-B-commit, M-EAR-1/{synthetic-label, head-regularization, feature-representation}-audit, OR M-EAR-1/armed-harness-fixture-reinforcement.

Merge Disposition

Merge report at workspace-root fallback per c34 convention (honest; c34-compliant). Six shadow-ledger rows queued for concat_clone_ledgers; zero cross-clone collisions under c32 -clone-0 suffixes. Sibling branches (clone-1 palette-driven-batch-v3, clone-2 vst3-nondeterminism) converged at 2026-08-29T05:44:05:50; clone-0 is now the slow branch — compute-bound on 43 real-audio songs, and c26 explicitly authorized the wait. c37 should be prepared for a “still running” merge report if extraction extends beyond the fork’s convergence window.

Cycle-37 Handoff (Two-Path, Per Report §5)

Path 1 (if EAR_v0_LANDS or EAR_v0_PARTIAL at 43-song completion): 1. M-EAR-1/real-label-training-v1 — larger corpus (target 80-song per c26 Path B) + class-imbalance reweighting; upstream c6 chassis unchanged.

Path 2 (if EAR_v0_INSUFFICIENT at 43-song completion — first-class deliverable per operator): 1. M-EAR-1/real-label-training-v1 — larger corpus + reweighting to unblock SB1; do NOT rebrand as EAR_v0_LANDS via post-hoc bar adjustment.

Infra handoff (report §6): silent-background-job death is a first-class campaign failure mode (n=2: c31 fixture, c36 extraction). Recommendation surviving to c37: (i) any background job spanning cycle boundaries MUST be launched via nohup setsid with a periodic heartbeat log the harness can inspect; (ii) any cycle inheriting a supervised background job in flight is DISQUALIFIED from producing “wait” as its sole cycle output and MUST produce ≥1 orthogonal on-disk deliverable.

Next-Cycle Priority Order (Per Cycle-3 Auditor Guidance)

1. **Close the deferred cache-regeneration-determinism half** on one of the 11 already-cached songs.
2. **Verify anchor preservation snapshot test coverage** in tests/test_ear_v0_real_label_training.py (two tests).
3. **Check extraction progress against ETA:** `ls data/ear_v0/per_song_features/*.npy | wc -l`. If ≥30, completion pass may become possible; if ≥43, execute §7 verbatim (folds → CORN training with torch.manual_seed(0) + BLAS pins → SB1/SB2/SB3 → leak-ablation → verdict.json with rubric_hash byte-equal → byte-determinism × 2 → anchor snapshot execution → fill report placeholders → emit closing 5 events).
4. **If extraction stalled again:** check data/ear_v0/extract3.log tail, `ps -ef | grep extract_`

features_v0, dmesg | tail. Do NOT restart naïvely a third time. Land diagnostic findings in data/ear_v0/extraction_liveness.tsv under restart_attempt_2_diagnosis row. Escalate _manager/background-job-supervision-clone-0.

5. **If short of 43/43 AND items 1-4 done AND no parallel work:** pause memo becomes defensible; state file count, elapsed vs ETA, resumption trigger (ls | wc -l == 43). One sentence.

Do NOT: adjust SB thresholds; re-open c22/c23/c25 anti-patterns; re-verify rubric SHA / mtime / interpreter guard / PRNG grep / sidecar_nonfactor grep (cleared cycles ago); modify c6 CORN chassis or feature cache; import c15 i4_stratified.py.

Cumulative Progress

M-EAR-1 line (post-c36 Branch A entry):

Cycle	Milestone	Status
c22-c25	M-EAR-1/{synthetic-label, head-regularization, feature-representation}-audit chassis chain	Path A exhausted
c26	_manager/M-EAR-1-path-B-commit	Committed; three SBs frozen FIXTURE_READY (six-times-VALIDATED) IN-PROGRESS (CONTINUE at cycle 3; extraction 11/43 with ~2 h ETA)
c31	M-EAR-1/armed-harness-fixture-reinforcement	
c36 (this)	M-EAR-1/real-label-training-v0 (Path B first real fire)	

Path B armed harness fires for real: the c26 pre-registered plan is executing on the operator's 43-song delivered corpus; egress unblock is not required for this training pass because rated audio is on-disk. The M-EAR-1 armed-not-fired posture that has held across c26-c35 is now advancing to armed-and-firing at c36.

Pattern durability: rubric-first pre-registration discipline held for the substantive-cycle-3 pipeline (rubric SHA committed before scripts, embedded in rubric_hash.txt, ready to embed in verdict.json at completion).

c29 state-machine lemma respected: peer sub-milestone; ledger topology stays a DAG.

c32 fanout-namespace convention held: infra families -clone-0-suffixed, substantive M-* unsuffixed.

Silent-background-job supervision pattern now observed n=2 (c31 fixture, c36 extraction); infra handoff recommendation formalised at report §6 and durably ledgered under _manager/background-job-supervision-clone-0. This is the second n-of-2 observation this fork; the auto-termination-on-N-consecutive-standby heuristic carried across prior branches now has a complementary infra recommendation for the opposite failure mode (silent stall instead of standby).

Collision-modeling arc: closed at PARTIAL_BP_UNRESOLVED_SHAPE (c30 terminal); no re-opening proposed.

[END OUTPUT]
