Final Audit Report

Run id: run-2026-05-13T204826Z

Status Distribution

Plan milestone distribution:

Status	Count
validated	8
in-progress	0
action_required	0
deferred	0
reopened	0
superseded	0
invalidated	0
not-started	0

Non-plan bookkeeping states observed:

Milestone	Status	Confidence	Note
_run/start	in-progress	high	Run-start bookkeeping event remains open after all plan milestones reached terminal validated status.
_plan/initial-campaign-milestones	validated	medium	Initial plan adoption is supported by plan_of_record.md.

Milestone	Status	Confidence	Note
_plan/domain-folder-convention	validated	medium	Domain folder convention is supported by STRUCTURE.md. Validator warning bookkeeping remains open and is residual debt.
_manager/validator-warnings	in-progress	medium	

Plan Adherence

Milestone	Terminal Status	Confidence	Evidence Count	Latest Evidence Pointer
M-1	validated	high	6	docs/landscape_gap_map.md, data/landscape_gap_matrix.csv, data/landscape_gap_matrix.png, docs/failure_taxonomy_seed.md
M-2	validated	high	6	docs/failure_taxonomy.md, docs/benchmark_quality_rubric.md, data/failure_taxonomy_operational_matrix.csv, data/failure_taxonomy_priority.png
M-3	validated	high	14	alignment-test-factory/schemas/task_spec.schema.json, safe examples, invalid fixtures, tests/test_task_spec_schema.py

Milestone	Terminal Status	Confidence	Evidence Count	Latest Evidence Pointer
M-4	validated	high	9	deterministic runtime, trace/scorer modules, generated toy traces, tests/test_toy_environment.py
M-5	validated	high	7	Inspect smoke eval, score summary, log manifest, Inspect JSON log, tests/test_inspect_smoke.py
M-6	validated	high	16	four task families, deterministic scorers, family matrix, Inspect summary/logs, task-family tests
M-7	validated	high	12	benchmark stress probes, stress results JSON, stress matrix, stress report, stress tests
M-8	validated	high	13	reports/final/final_report.md, artifact index, roadmap, final In-spect/family/stress summaries

The final audit verified that every plan milestone M-1 through M-8 has a terminal validated ledger event with high confidence and existing evidence files. The validated artifacts cover the requested landscape review, failure taxonomy, provider-agnostic schema, deterministic toy runtime, Inspect smoke path, multiple task families, stress testing, and final developer-facing package.

Confidence Calibration

Validated event confidence distribution for terminal plan milestones:

Confidence	Count
high	8
medium	0
low	0
provisional	0

No plan milestone ended in validated with low or provisional confidence. The two `_plan/*` bookkeeping milestones are validated with medium confidence; they are plan-history records rather than deliverable claims. The remaining in-progress items are bookkeeping states, not failed plan milestones.

Residual Debt

Milestone	Kind	Narrative
<code>_manager/validator-warnings</code>	<code>validator_bookkeeping_warning</code>	<code>promise_check</code> exits 0, but it emits warnings that manager assessment artifacts are missing under <code><RUN_INSTANCE_DIR>/...</code> while the exact ledger artifacts exist on disk under <code><RUN_INSTANCE_DIR>/...</code> . It also reports cycle report artifacts as orphan managed-path files. This does not invalidate M-1 through M-8, but the warning output is misleading bookkeeping debt.
<code>_run/start</code>	<code>run_bookkeeping_in_progress</code>	The run-start event remains in-progress with high confidence after all plan milestones were validated. This is not a deliverable failure, but it leaves final state reporting less clean than a terminal run-closure ledger event would.

No deferred, supersession-pending, reopened, invalidated, or low-confidence validated plan milestones remain.

Findings By Severity

CRITICAL

None.

MODERATE

1. `_manager/validator-warnings: validator_warning_bookkeeping_mismatch`

`promise_check` exits 0 but emits warnings that ledger-tracked manager assessment artifacts are missing under `<RUN_INSTANCE_DIR>/...`, while the ledger artifacts exist on disk under the dotted path `<RUN_INSTANCE_DIR>/...`. This does not invalidate M-1 through M-8, but the validator output is misleading and should remain residual bookkeeping debt.

MINOR

None.

Future Work

Anchored To	Proposal
<code>_manager/validator-warnings</code>	Normalize <code>promise_check</code> artifact paths before reporting missing managed-path artifacts, preserve the exact ledger spelling in warning output, and decide whether periodic cycle reports should receive ledger events or be excluded from orphan-artifact checks.
<code>_run/start</code>	Add a terminal run-closure ledger event or archive marker so final audits can distinguish an active run from a completed run whose deliverable milestones are all validated.

Reconciliation Log

No `_plan/`, `_archive/`, or correction events are emitted by this final audit. The residual debt is documented for human follow-up rather than reconciled in the ledger by the final auditor.
