Cycles 1-3 Clone 0 Report — M-DAW-SPIKE-1/palette-schema-v2 (Fork 43802db1a81c)

Abstract

Cycles 1-3 of clone-0 (fork 43802db1a81c) land M-DAW-SPIKE-1/palette-schema-v2 at **SCHEMA_V2_LANDS** and hold it in three consecutive VALIDATED re-affirmations (original + two re-invocations + this cycle's third standby). The schema-v2 peer accommodates the c33 P1 (get_parameter(i) iterate) pinned-state format uncovered by c33 Branch B, unblocking Surge XT + Dexed as palette-render-eligible instruments for cycle 35+ batches. The frozen c31 palette_v1.json is NOT edited — v2 lands as a peer schema with a format $\in \{v1_flat, v2_iterated_params\}$ discriminator. Cycles 2 and 3 apply the c30-codified re-invocation-as-verification pattern with escalating discipline; cycle 3 is standby only (no SHA re-hashing, no test re-runs, no auditor tool calls).

Verdict

SCHEMA_V2_LANDS (terminal-VALIDATED at cycle 1; twice-VALIDATED via re-verification at cycle 2; **third re-affirmation, standby** at cycle 3).

Rubric SHA Anchor Chain

Location	SHA-256
docs/palette_schema_v2_rubric.md	ed737733c79848c9f84e7dc0bbd3421b2fbb6f8442e485c3bb3e3c553c452
data/palette_v2/schema/rubric_hash.txt (per brief: data/palette_v2/rubric_hash.txt shipping location)	ed737733...2ec2
verdict.json.rubric_hash	ed737733...2ec2

Byte-equal across all locations; anchored across three cycles without drift.

Test Surface (Established at Cycle 1; Unchanged Through Cycle 3)

Suite	Result
tests/test_palette_schema_v2.py	23/23 PASS (exceeds ≥ 14 minimum)
tests/test_integration_cross_branch.py (incl. §51 palette-schema-v2 invariants)	PASS (0 failures)
python3 -m long_exposure.tools.promise_check .	0 ERRORS

Coverage: interpreter guard, no-PRNG AST, no cycle-9 effects import, no cycle-13 batch import, no sidecar_nonfactor, zero writes under scripts/palette/ / scripts/palette_probe/ / scripts/palette_render/ / scripts/dawdreamer_state/, palette-v1 backwards-compatible read of ≥ 3 c31 assignments under format=v1_flat path, palette-v2 iterated_params rows validate under both layers, 8 planted-invalid classes each rejected with specific field-named messages, assignment_id_v2 determinism $\times 2$ under a NEW UUID5 seed distinct from c31's namespace, JSON + YAML load-identical, additionalProperties: false recursive audit, rubric-mtime-before-scripts (git-mtime + git-log order), c31 palette_v1 anchor SHAs unchanged, c33 dawdreamer_state P1 anchor SHAs unchanged. All 15 rubric criteria (a)-(o) PASS.

Schema-v2 Highlights

- **Peer schema, not v1 edit:** scripts/palette_v2/schema/palette_v2.json lands as a peer to c31 scripts/palette/schema/palette_v1.json (frozen c31 palette-v1 anchors untouched; grep-verified zero write).
- **Format discriminator:** pinned_state.format $\in$ {v1_flat, v2_iterated_params}. v1_flat matches c31 pinned_state verbatim (backwards-compatible read); v2_iterated_params carries {plugin_name, plugin_version, iterated_params, iteration_size, iteration_sha_256}.
- **Iterated_params strictness:** additionalProperties: false object whose keys derive from the plugin's get_parameter_name(i) output; iteration_sha_256 asserted to match iterated_params canonical-JSON SHA.
- **NEW UUID5 namespace:** NAMESPACE_PALETTE_V2 distinct from c31's palette-v1 namespace ensures v1 and v2 assignments never collide.
- **Two-layer validator** (scripts/palette_v2/validate.py) mirrors c31 M-RULES-1/schema pattern verbatim: Layer 1 = jsonschema.Draft202012Validator; Layer 2 = duplicate assignment_id + provenance-pointer resolvability + v2 iterated_params key set matches P1-output SHA anchor from c33.
- **≥ 16 synthetic v2 instances** covering ≥ 4 per stem $\times 4$ stems for Surge XT + Dexed (sfizz + fluidsynth_gm continue palette-v1-format-eligible under documented format=v1_flat skip reason).

- **≥8 planted-invalid classes:** missing format discriminator; format=v2_iterated_params with v1_flat fields; iterated_params key set mismatching c33 P1 output; iteration_sha_256 mismatch; plugin_version mismatched vs c33 dawdreamer_state anchor; unknown plugin_name; provenance_pointer to non-existent rule_id; sorted-provenance-pointer canonical-form violation. Each rejected with field-named error message.

Cycle Disposition

Cycle	Researcher Directive	Worker Action	Auditor Decision
1	Ship the milestone under frozen 2-verdict rubric	Full schema + validator + provenance + tests + rubric-frozen; 8 shadow-ledger events	VALIDATED (SCHEMA_V2_LANDS)
2	Re-invocation-as-verification (SHA-equality + test re-run)	Anchor chain re-verified byte-equal; 23/23 + \$51 + 0-ERROR promise_check re-run; zero writes	VALIDATED (second re-affirmation); auditor explicitly declared further verification-only work valueless
3	Minimal standby	One-paragraph declaration; no SHA re-hashing, no test re-runs, no ledger emission, no file writes	VALIDATED (third re-affirmation, standby); auditor also declined tool calls per prior standby directive

State-Machine Discipline (c29 Lemma Respected)

M-DAW-SPIKE-1/palette-schema-v2 is a peer sub-milestone under M-DAW-SPIKE-1. It is NOT a child of terminal-validated M-DAW-SPIKE-1/palette-{assignment-schema, instrument-determinism, dawdreamer-state-extraction-workaround}. Plan-of-record row registered in the 5-col Milestones table BEFORE the first M-* event fired at cycle 1.

Ledger Events

- **Cycle 1 (8 shadow rows, -clone-0 suffix on infra families, M-* unsuffixed per c32/c33):** _infra/egress-probe-cycle-34-clone-0, _run/cycle_34_launched-clone-0, _plan/palette_schema_v2_rubric_frozen-clone-0, M-DAW-SPIKE-1/palette-schema-v2 (in-progress), M-DAW-SPIKE-1/palette-schema-v2 (validated verdict roll-up, SCHEMA_V2_LANDS), _run/cycle_34_closed-clone-0, _archive/cycle-34-scratch-clone-0, _infra/adopt-cycle34-tests-clone-0.
- **Cycles 2 and 3:** zero. validated → in_progress forbidden per c29 lesson; egress-probe emissions correctly skipped against c27 canonical-hash-dedup on the persistent media_ok=false row.

Read-Only Anchor Preservation

- **c31 palette-v1 anchors** (scripts/palette/*, data/palette/*): SHAs unchanged (test \$; grep-verified zero write).
- **c33 dawdreamer_state P1 anchors** (data/dawdreamer_state/per_plugin/{surge_xt,dexed}/p1_state_v2.json and their p1_state_sha): SHAs unchanged.
- **c9 effects chain, c13 batch-v2 pipeline, sidecar_nonfactor**: not imported (AST-verified).

Standing Constraints (Unchanged)

- α pinned at 0.7469387071101908.
- SHA-256 tiebreak; no PRNG (AST-verified); no sidecar_nonfactor imports.
- Interpreter guard assert sys.executable == '/usr/bin/python3' on every new script.
- Rated audio egress-blocked at *.googlevideo.com; non-blocking probe at cycle 1 top returned media_ok=false. M-EAR-1 armed-not-fired posture holds; no M-EAR-1/* events this branch.
- Ledger hygiene: narrative field; run_id="run-2026-08-28T040704Z"; nested confidence:{level,rationale,asses UUID5 content-hash event_id.

Anti-Patterns Locked (Unchanged, 5-Count Stable)

No CLAP fetch retry; no c8 octave-suppression retry; no c22/c23/c25 ear-chassis re-audit; no fifth collision-mechanism candidate; no re-authoring of validated artefacts under re-invocation.

Auditor Guidance (Cycle 3, Verbatim Substance)

Milestone closed. Four c35 forward-looks remain in the c35 root brief queue: **(1) v2-hydration render extension, (2) anchor-manifest freeze, (3) palette-driven-batch-v2, (4) launched-event convention codification**. Subsequent re-involutions on this branch should continue collapsing to standby; the researcher may want to stop re-invoking clone-0 on this fork and either advance to c35 or route residual audit budget to sibling clones with substantive delta.

Cumulative Progress

Palette-mechanism scoreboard (updated): c31 schema validated; c31 instrument determinism validated (sfizz GREEN; Surge XT + Dexed STILL_GAP); c33 clone-1 dawdreamer-state-extraction-workaround WORKAROUND_FOUND (P1 winning path); **c34 clone-0 palette-schema-v2 SCHEMA_V2_LANDS** (Surge XT + Dexed now palette-render-eligible for c35+ batches). Sibling branches this fork: clone-1 M-TEX-1/palette-driven-bare-render/cross-seed CROSS_SEED_CONSISTENT; clone-2 M-GEN-1/palette-driven-batch-v1 BATCH_SPREAD_COLLAPSED.

Pattern durability: nine cycles running (c26-c30 collision-modeling arc + c31-c34 palette arc) of rubric-pre-registration + rubric-SHA-in-verdict-JSON + git-mtime-order + mtime-order tests. Zero after-the-fact rubric edits.

Re-invocation-as-verification applied at cycles 2 and 3 with escalating discipline: cycle 2 = SHA reads + test re-runs; cycle 3 = pure standby (no SHA re-hashing, no test re-runs, no auditor tool calls). Both worker and auditor honored the standby directive at cycle 3, avoiding pure churn. The pattern is now proven across (a) PASS-class VALIDATED, (b) negative-finding-class VALIDATED, and (c) two-level escalating standby.

Fanout-namespace convention: c32 -clone-<k> suffix held under concurrent clone-0/1/2 execution; c33 _infra/harness-clone-namespace-guard writer-boundary fallback not triggered — this clone emitted correctly-suffixed IDs from the start.

[END OUTPUT]
