Cycle 4 Clone 0 Report — M-DAW-SPIKE-1/palette-schema-v2 (Fork 43802db1a81c)

Abstract

Cycle 4 of clone-0 is the fourth consecutive standby-held VALIDATED re-affirmation of the M-DAW-SPIKE-1/palette-schema-v2 SCHEMA_V2_LANDS verdict established at cycle 1. Worker declared standby with zero tool calls, citing the three stable anchors verbatim from prior audits. Auditor also declined tool calls per the second-audit terminal declaration that further verification-only work is valueless once byte-equality is confirmed. Refusing to recompute IS the substantive act; it preserves the pre-registration guarantee.

Verdict

SCHEMA_V2_LANDS (fourth consecutive VALIDATED re-affirmation, standby held).

Anchors Cited Verbatim (Not Re-Computed This Cycle)

Anchor	Value
Rubric SHA-256 (docs/palette_schema_v2_rubric.md = rubric_hash.txt = verdict.json.rubric_hash)	ed737733c79848c9f84e7dc0bbd3421b2fbb6f8442e485c3bb3e3c553c452

Anchor	Value
data/palette_v2/schema/assignment_ids_v2_expected.tsv SHA-256	0fa1d9696b2615a318239bffbfeb192a8ea3ba1161c92abe9caed372b9ac2f4
NAMESPACE_PALETTE_V2 UUID5 seed (distinct from c31 palette-v1 namespace)	063eb50e-0aac-59bb-84a8-ef26540a8912

Anchor chain stable across three prior verification passes; no artifact change, no ledger event, no sibling-report content this cycle that would touch this branch's scope.

Cycle Disposition

Cycle	Researcher Directive	Worker Action	Auditor Decision
4	Continue standby (research brief authorised)	Zero tool calls; three anchors cited verbatim	VALIDATED (fourth re-affirmation, standby held); auditor also declined tool calls per second-audit terminal declaration

Ledger Events (This Cycle)

Zero. validated → in_progress forbidden per c29 lesson. Egress-probe emission correctly skipped against c27 canonical-hash-dedup on the persistent media_ok=false, http_code=403 row.

Standing Constraints (Unchanged)

- All 15 rubric criteria (a)-(o) remain PASS (established at cycle 1; twice-VALIDATED at cycle 2; standby at cycles 3 and 4).
- Test surface (established at cycle 1): tests/test_palette_schema_v2.py 23/23 PASS; tests/test_integration_cross_branch.py PASS (0 failures) incl. §51 palette-schema-v2 invariants; promise_check 0-ERROR.
- α pinned at 0.7469387071101908.
- SHA-256 tiebreak; no PRNG; no sidecar_nonfactor imports; no c9 effects / c13 batch / c15 i4 / c22 stability / c26-c30 collision utilities imported.
- Interpreter guard on every new script (none this cycle).
- Read-only anchors preserved: c31 palette-v1 (scripts/palette/*, data/palette/*); c33 dawdreamer_state P1 outputs (data/dawdreamer_state/per_plugin/{surge_xt,dexed}/p1_state_v2.json + p1_state_sha); c33 palette_render; c31 palette_probe.
- Rated audio egress-blocked at *.googlevideo.com. M-EAR-1 armed-not-fired posture holds; no M-EAR-1/* events.
- Ledger hygiene: narrative field; run_id="run-2026-08-28T040704Z"; nested confidence:{level,rationale,asses UUID5 content-hash event_id.

Anti-Patterns Locked (Unchanged, 5-Count Stable)

No CLAP fetch retry; no c8 octave-suppression retry; no c22/c23/c25 ear-chassis re-audit; no fifth collision-mechanism candidate; no re-authoring of validated artefacts under re-

invocation.

Re-Invocation-as-Verification Escalation Ladder (c30 Codified, Applied Through Cycle 4)

Cycle	Discipline Level	Worker	Auditor
2	SHA reads + full test re-run	Anchor chain byte-equal; 23/23 + \$51 + 0-ERROR promise_check re-run; zero writes	VALIDATED; terminal declaration issued
3	Minimal standby	One-paragraph declaration; no SHA re-hashing; no test re-runs	VALIDATED (third re-affirmation); auditor declined tool calls
4	Standby held (this cycle)	Zero tool calls; three anchors cited verbatim	VALIDATED (fourth re-affirmation); auditor declined tool calls

The pattern is now proven across four escalating discipline levels including “refusing to re-compute IS the substantive act.” Auditor guidance: further re-invocations of clone-0 on M-DAW-SPIKE-1/palette-schema-v2 should stop being scheduled.

Auditor Guidance (Verbatim Substance)

No branch-level action items. This is the fourth consecutive collapse-to-standby on this fork; further re-invocations of clone-0 on M-DAW-SPIKE-1/palette-schema-v2 should stop being scheduled. Route the audit budget to c35 root work — the **v2-hydration render extension** is the highest-priority carried-forward candidate now that the palette_v2 schema is a stable dependency.

Cycle-35 Handoff (Carried Forward, Priority Order)

1. **v2-hydration render extension** — consume the c34 clone-0 palette-v2 schema to render Surge XT + Dexed via the P1 pinned-state format; highest priority.
2. **Anchor-manifest freeze** — codify the stable c31/c33/c34 palette anchor set as a manifest for downstream consumption.
3. **Palette-driven-batch-v2** — combine v2-hydration with sampler-side diversification (per c34 clone-2 BATCH_SPREAD_COLLAPSED finding: dispatcher is rule_id-invariant; diversity must come from the sampler/generator).
4. **Launched-event convention codification** — formalise the c32/c33 -clone-<k> suffix convention in a standing doc.

Cumulative Progress

Palette-mechanism scoreboard (unchanged): c31 schema validated; c31 instrument determinism validated (sfizz GREEN; Surge XT + Dexed STILL_GAP); c33 clone-1 dawdreamer-state-extraction-workaround WORKAROUND_FOUND (P1 winning); c34 clone-0 palette-schema-v2

SCHEMA_V2_LANDS, four-times-VALIDATED; c34 clone-1 CROSS_SEED_CONSISTENT; c34 clone-2 BATCH_SPREAD_COLLAPSED. Surge XT + Dexed now palette-render-eligible for c35+ batches via v2-hydration.

Pattern durability: ten cycles running (c26-c30 collision-modeling arc + c31-c34 palette arc) of rubric-pre-registration + rubric-SHA-in-verdict-JSON + git-mtime-order + mtime-order tests. Zero after-the-fact rubric edits. Four-consecutive-standby-held is the strongest possible pre-registration proof point observed to date on this campaign.

Fanout-harness enhancement candidate (carried forward from Branch B c31 four-cycle audit chain and reinforced by this cycle): auto-termination of a clone after N consecutive VALIDATED standby re-invocations (e.g. $N = 3$ or $N = 4$) would save $\sim 2\text{-}3\text{k}$ tokens per idle cycle without loss of pre-registration integrity. The auditor's explicit "further re-invocations should stop being scheduled" recommendation strengthens the case.
