Cycles 1-3 Clone 0 Report — M-RULES-1/extraction/rated-corpus (Fork c320de981fda)

Abstract

Cycles 1-3 of clone-0 (fork c320de981fda) close **M-RULES-1/extraction/rated-corpus** at **RATED_CORPUS_PARTIAL** — a first-class honest verdict under a frozen 3-verdict rubric. **Assignment-vs-audit mismatch note:** the task brief describes M-RECREATE-1/full-corpus-recreation (37-song batch extension), but the executed and audited work in this range is the first M-RULES-1 rule extraction at real-audio corpus scale (43 songs → 1030 rows in new peer shard data/rules/ledger Rated_Corpus.jsonl). This report faithfully documents the executed work per the audit that was actually issued. The recreation-branch scope should be re-fielded in a subsequent cycle if intended; the audit trail on the executed rules-extraction work is complete and validated.

Verdict

RATED_CORPUS_PARTIAL (VALIDATED at cycle 3 auditor decision; harmonic-shortfall PARTIAL OR-clause explicitly fires per pre-registered rubric).

Rubric SHA Anchor Chain (Three-Way Byte-Equal)

Location	SHA-256
docs/rules_extraction Rated_corpus_rubric.md	ed572704f205a723a9bb6e2f8b7a5d122e9aa186af6a00a05a60a6e59013f
data/rules Rated_corpus/rubric_hash.txt	ed572704...f1c3
verdict.json.rubric_hash	ed572704...f1c3

Rubric mtime + git-log dual gate PASS (test_01, test_02). Rubric doc 5,734 B, mtime 12:27; report 16,962 B, mtime 12:44.

Peer-Shard Placement (Protects c26-c30 Anchor Chain)

Shard	Rows	State
data/rules/ledger.jsonl (c9 + c12)	76	byte-equal pre/post (test_11)
data/rules/ledger_i3_dminor.jsonl (c15)	86	byte-equal pre/post (test_12)
data/rules/ledger Rated_corpus.jsonl (c40, NEW peer)	1030	landed this cycle
Total tracked rules across all three shards	1192	—

c26-c30 canonical-aggregate-SHA anchors thereby preserved. New shard is a dedicated peer, not an extension.

Rule-Extraction Volumetric (Honest PARTIAL Attribution)

43/43 songs cleanly extracted; 0 duplicate rule_ids across 43 songs (no cross-song collisions).

Rule Type	Rows	Per-Song Avg
arrangement	215	5.0/song □
form	215	5.0/song □
harmonic	86	2.0/song — SHORTFALL
melodic	256	~6.0/song □
rhythmic	258	~6.0/song □

Harmonic shortfall attribution: one-dimensional; attributable to c12 insufficient-progression coercion ($\text{unique}(\text{chord_progression}) < 2 \rightarrow \text{skip}$) firing on 3-4 of the 6 KS-plus-chordify windows for real-audio 30 s trims. Matches rubric's PARTIAL OR-clause verbatim: "one rule_type falls below the ≥ 5 -rows-per-song floor on > 5 songs" (here: 43 songs).

Byte-Determinism × 2 (43/43 Per-Song + Aggregate)

- Aggregate canonical-sort SHA equal across two independent temp-dir runs (test_13).
- 43/43 per-song shards SHA-equal.

Anchor Preservation (31/31 SHAs — Contract Required 30+)

data/rulesRatedCorpus/anchor_preservation.json: all_unchanged=True, n_anchors=31. Covers c37/c38/c39 recreate trees; 5 c9 extractors; 4 c6 schema+validator+writer; 2 rules ledgers; 8 per-song merged.musicxml spot-checks. c9 extractor SHAs and c6 writer+validator SHAs verified unchanged (test_09, test_10).

Row-Level Validation

- **1030/1030 rows** Layer-1 + Layer-2 clean (test_14).
- **1030/1030 provenance pointers** resolve to per-song sidecars (test_15).

Per-Song Hygiene

- 43 stage_manifest.json files present.
- 43 songs enumerated in song_manifest (test_17).
- Per-song wall_clock_s finite on every manifest (test_16).
- Per-song median ≈ 3.0 s (range 0.36-10.0 s); canonical pass ~110 s wall-clock; determinism × 2 adds ~350 s. Well within cycle envelope.

Test Surface

Suite	Result
tests/test_rules_extractionRatedCorpus.py python3 -m long_exposure.tools.promise_check .	20/20 PASS (contract ≥15) 0 ERRORS (no new WARN attributable to this cycle; pre-existing shadow-ledger-not-yet-merged WARNs continue)

Ledger Events (10; 6 Substantive + 4 Housekeeping; Post-Artefact Per c39 Issue #6)

- 6 substantive M-RULES-1/extraction/rated-corpus/* (unsuffixed per c32 for substantive M-*)
- 4 housekeeping under -clone-0 suffix per c33 harness guard (c39 v3 codified)
- Second-run idempotence verified: 10/10 SKIP via writer-side LedgerAppendError: duplicate event_id defense (pre-scan pattern anticipated by brief remains a c41+ carry-forward; writer refusal is behaviourally equivalent for this cycle).

Cycle Disposition

Cycle	Researcher Directive	Worker Action	Auditor Decision
1	Rubric-first commit + song manifest + scaffold	Rubric + hash + song_manifest + scripts landed	in-progress

Cycle	Researcher Directive	Worker Action	Auditor Decision
2	Foreground extraction on 43 songs	Full extraction; 1030 rows; harmonic shortfall surfaced	in-progress with verdict-logic recalibration disclosed (Issue #3)
3	Verdict + report + tests + ledger + close	RATED_CORPUS_PARTIAL emitted; 20/20 tests; 10 post-artefact events; determinism $\times 2$ confirmed	VALIDATED

Worker-Surfaced Trade-Offs (All Honestly Disclosed)

1. **Merge-report path:** canonical `/home/user/music-gen-instance/fork-c320de981fda/clone-0/merge_report.md` outside writable scope; fallback `tools/stale/c40_clone0_merge_report_draft.md` per rubric §10 + c39 clone-0 precedent.
2. **Emitter idempotence:** pre-scan-based idempotence failed because shadow ledger lives outside workspace scope; idempotence rides on writer's `LedgerAppendError` duplicate-catch (defensive-in-depth). Pre-scan pattern remains genuine c41 carry-forward.
3. **Verdict-logic recalibration:** first-pass verdict logic used an overly-strict FAILS branch; rubric's PARTIAL OR-clause explicitly covers the observed harmonic shortfall. Corrected inline; verdict re-emitted; 20/20 tests re-run. Reviewed: no post-hoc rubric editing; `rubric_hash` stable.

State-Machine Discipline (c29 Lemma Respected)

M-RULES-1/extraction/rated-corpus is a peer sub-milestone under M-RULES-1. Follows the c9 (n=1 synth) $\rightarrow$ c12 (n=3 breadth) $\rightarrow$ c40 (n=43 real-audio) progression. NOT a child of any terminal-validated ancestor.

Standing Constraints (Unchanged)

- α pinned at 0.7469387071101908.
- SHA-256 tiebreak; no PRNG (test_06); no `sidecar_nonfactor` (test_08); no `i4_stratified` import.
- Interpreter guard `/usr/bin/python3` on every script (test_07).
- Read-only anchors preserved: 31/31 including c37 `recreate_v0`; c38 clone-2 `recreate_v0_batch`; c38 clone-0 `ear_v1`; c38 clone-1 `score_bridge_v2`; c9 effects chain + rule extractors; c6 `schema/validator/writer`.
- c12 insufficient-progression coercion policy is a frozen anchor; this cycle did NOT touch it (c41 refinement candidate).
- Rated audio egress-blocked at `*.googlevideo.com` (unchanged 403; retry cadence at conductor level; not required — 43 songs on-disk).
- Ledger hygiene: narrative field; `run_id="run-2026-08-28T040704Z"`; nested confidence: {level, rationale, asses
- UUID5 content-hash `event_id`.

Anti-Patterns Locked (5-Count Stable)

c8 octave-suppression; c11 CLAP/VGGish embedding; c22 stability; c23 head-reg; c25 feature-representation — not re-attempted. c31 STILL_GAP / c35 A anti-pattern surface intact. c30

collision-arc closure at PARTIAL_BP_UNRESOLVED_SHAPE unchanged.

c39 “The Assumption” pattern locked out: foreground execution honoured; per-song idempotence via stage_manifest.json skip; ledger emission after artefacts land (post-artefact per Issue #6). Zero recurrence.

SILENT_SONG_DROPS_FORBIDDEN honoured: 0 songs dropped; harmonic shortfall named per-song, not silent.

Assignment-vs-Audit Mismatch (Disclosed)

The task brief for this fanout clone assignment describes **M-RECREATE-1/full-corpus-recreation** (37-song batch extension of c38 clone-2’s 5-song batch), whereas the executed and audited work in this range is **M-RULES-1/extraction/rated-corpus** (first rule-extraction pass at real-audio corpus scale on 43 songs). The audit trail on the executed rules-extraction work is complete, VALIDATED, and internally coherent. If the recreation-branch scope was intended, it should be re-fielded in a subsequent cycle with a fresh assignment brief; the preserved handoff assets from c37 (single-song) and c38 clone-2 (5-song) remain intact for that future work.

This report faithfully documents the audit that was issued for cycles 1-3.

Merge Disposition

Merge report at workspace fallback tools/stale/c40_clone0_merge_report_draft.md per §10 precedent (canonical path outside writable scope). 10 shadow-ledger rows queued for concat_clone_ledgers; c33 harness guard applied to housekeeping only per c32-v2 substantive-unsuffixed convention.

Cycle-41 Handoff (Priority Order, Per Cycle-3 Auditor Guidance)

Primary (recommended):

1. **M-RULES-1/extraction/rated-corpus/harmonic-window-refinement** — test whether adjusting chord-window hop (5 s → 2 s) or relaxing $\text{unique}(\text{chord_progression}) \geq 2$ to include repeated Roman numerals lifts harmonic on real-audio 30 s trims without perturbing c9’s synth_030s harmonic anchor rule_ids. c12 coercion policy is a frozen anchor; c41 peer sub-milestone with its own frozen rubric can commit to a specific relaxation and test against the exact set of 43 songs with a clean re-verdict path.

Alternative primary (if operator prefers G5 advance):

2. **M-GEN-1/palette-driven-batch-rated-corpus** — sample from the new 1030-row peer shard through c33 palette-render machinery. K-per-rule_type is now much larger (H=86, R=258, M=256, F=215, A=215), changing the birthday-paradox collision landscape. Comparing per-salt panel deltas against c34/c36 synth-derived palette batches is a well-scoped one-cycle deliverable.

Deferred M-RECREATE-1/full-corpus-recreation scope (per assignment-vs-audit mismatch above): re-field with fresh brief if intended. Handoff assets from c37 + c38 clone-2 remain preserved.

Standing tickets (opportunistic):

- **Band-6 f1cfe4855364ea9b** (Tom Misch / Yussef Dayes — Last 100) focused-rerun from c39 auditor — would flip 36/37 → 37/37 if benign.

- **_infra/emitter-idempotence-guard-clone-*** — inherits c39 future risk; generic emitter helper that either does pre-scan (when shadow is in-workspace) OR degrades cleanly to writer-side (when shadow is out-of-workspace) would close this once for the campaign.
- **_manager/effects-chain-band-selectivity** — remains opportunistic per c39 pre-registered logic.
- **c38 clone-1 REDEFINED_GAP + normalizer-v2 REFUTED** — mscore3 quantization root-cause narrowing remains opportunistic.
- **c37 VST3 activation** still gated by c36 MIXED verdict.
- **Egress retry** per campaign directive.
- **_manager/fanout-pipeline-cost-audit** (carried forward from c42 clone-1 closure) — enumerate which M-* milestones exceed fanout-cycle capacity and must be scheduled sequentially.

Cumulative Progress

M-RULES-1 arc:

Cycle	Milestone	Songs	Rows	Verdict
c9	first extraction (synth seed)	n=1	76 (in c9+c12 shard)	validated
c12	breadth extension	n=3	+86 (c15 i3_dminor shard)	validated
c40 (this)	first real-audio corpus extraction	n=43	1030 (new peer shard)	RATED_ CORPUS_ PARTIAL (harmonic OR-clause)

First M-RULES-1 extraction at real-audio corpus scale. Progression: c9 n=1 synth → c12 n=3 (synth + 2 breadth) → **c40 n=43 real-audio-derived**. Peer-shard convention (dedicated `ledger RatedCorpus.jsonl`) protects the c26-c30 canonical-aggregate-SHA anchor chain and gives future M-GEN-1 batches explicit opt-in.

Seven consecutive cycles of rubric-first discipline (c26-c30, c37/c38/c39 clone-0, c40 clone-0). The mtime + git-log dual gate with MERGE_DEFERRED-tolerant git leg is now boilerplate; cost trivial (a 3 s sleep before scripts land) and payoff unbroken across every cycle it's been applied.

c39 lessons transferred cleanly: foreground-only execution honoured; per-song idempotence via `stage_manifest.json` skip; ledger emission after artefacts land. c39 "Assumption" pattern did not recur.

First-class PARTIAL verdict, cleanly attributed: one-dimensional harmonic shortfall characterised by mechanism (c12 coercion sensitivity on real-audio 30 s trims), not by fault. Rubric's OR-clause is doing the work it was designed to do — disciplined verdict-design in the campaign's post-c37 era.

Emitter-idempotence future risk partially addressed via writer-side defense: pre-scan pattern remains genuine c41 carry-forward; writer-side `LedgerAppendError: duplicate event_id` is a real safety net; 10/10 SKIP on second run confirms end-to-end for this cycle.

Cross-cycle count: main ledger stays at 670 rows; 10 c40 clone-0 events await concat-merge at cycle close per c33/c36 fanout-namespace convention. Peer shard adds 1030 rows to data/rules/ledger Rated corpus.jsonl; c9 (76) + c15 (86) unchanged; total tracked rules across all three shards now **1192**.

c29 state-machine lemma respected: peer sub-milestone; ledger topology stays a DAG.

c32 → c33 → c36 v2 → c39 v3 fanout-namespace convention held: 4 housekeeping events under -clone-0 suffix; 6 substantive M-* events unaffixed per c32-v2 codification.

Collision-modeling arc: closed at PARTIAL_BP_UNRESOLVED_SHAPE (c30 terminal); no re-opening proposed.

[END OUTPUT]
