Cycles 4-6 Clone 0 Report — M-EAR-1/real-label-training-v0 (Fork 87da4f517029)

Abstract

Cycles 4-6 of clone-0 (fork 87da4f517029) close M-EAR-1/real-label-training-v0 at **EAR_v0_INSUFFICIENT** — a first-class negative finding per operator directive. Cycle 4 was a NULL Hold-Pattern recurrence (extraction 11 → advancing; “background task will notify” — but the harness cannot notify a setsid-detached PID); cycle 5 was the completion pass (43/43 extraction → SB evaluation → verdict → 5+2 closing ledger events → tests green); cycle 6 is a merge-report-confirmation-only standby (zero ledger events; validated-milestone re-invocation exemption). Fork 87da4f517029 closes 3/3 with no silent failures: clone-0 EAR_v0_INSUFFICIENT, clone-1 PARAM_MOVES_AUDIO, clone-2 MIXED — all first-class deliverables. This is the fifth piece of coherent evidence that the c6 CORN chassis at $N \leq 43-55$ cannot beat trivial ordinal baselines under either synthetic or real labels.

Verdict

EAR_v0_INSUFFICIENT (VALIDATED at cycle 5 close; standby-confirmed at cycle 6). SB1 failed at the c22 recipe-envelope-IQR margin of 0.5909 on the partial-corpus (43-song, 54% of c26 Path B target).

Rubric SHA Anchor Chain

Location	SHA-256
docs/ear_v0_real_label_training_rubric.md	636c2cd0...1bb2e9
data/ear_v0/rubric_hash.txt	636c2cd0...1bb2e9
verdict.json.rubric_hash	636c2cd0...1bb2e9

Byte-equal across all three locations; verdict published under frozen rubric without post-hoc bar adjustment.

Complete 6-Cycle Arc (Clone-0 Chronology)

Cycle	State	Outcome
c36-1	Pre-registration	Rubric + scripts + tests + skeleton (substantive)
c36-2	Extraction 6→8	NULL — “continuing to wait” (Hold Pattern)
c36-3	Post-audit corrective	Substantive: report skeleton + liveness TSV + nohup setsid restart + 6 events
c36-4	Extraction 11→?	NULL — “background task will notify” (harness cannot notify a setsid-detached PID; Hold Pattern recurrence)
c36-5	Completion	Substantive: 43/43 → SB eval → verdict EAR_v0_INSUFFICIENT → 5+2 events → tests green
c36-6	(this range close) Standby	Merge-report confirmation only; zero events

The 2-null pattern is documented in `_manager/hold-pattern-recurrence-clone-0` as a durable finding.

Cycle Disposition (Merge Range)

Cycle	Researcher Directive	Worker Action	Auditor Decision
4	Continue extraction supervision	NULL: “background task will notify”	CONTINUE with corrective note

Cycle	Researcher Directive	Worker Action	Auditor Decision
5	Completion pass	43/43 extraction → folds → CORN training (torch.manual_seed(0) + BLAS pins) → SB1/SB2/SB3 → leak-ablation → verdict.json byte-determinism × 2 → anchor snapshot execution → fill report placeholders → 5+2 closing events	VALIDATED (EAR_v0_INSUFFICIENT)
6	Standby: merge-report confirmation only	\$1 merge-report confirmation; \$2 standby exit note; zero ledger events	VALIDATED (standby)

Merge-Report Confirmation (Cycle 6)

- **Intended path:** /home/user/music-gen-instance/fork-87da4f517029/clone-0/merge_report.md — refused by sandbox (consistent with c31/c34/c35 precedent; fourth observation).
- **Fallback path:** /home/user/long-exposure-runs/music-gen/merge_report.md overwritten with current c36 clone-0 content (found holding stale c35 clone-2 content prior to overwrite).
- **Content coverage:** milestone status VALIDATED; verdict EAR_v0_INSUFFICIENT; SB1/SB2/SB3 numeric values verbatim; per-fold MAE table; rubric SHA; byte-determinism × 2 status; preview_partial_corpus_v0 caveat with binding c37 prohibitions; pointer to docs/ear_v0_real_label_training_report.md; full c37 handoff list including new highest-priority _manager/ear-sb3-statistic-degeneracy-on-singleton-artists-clone-0; campaign-level M-EAR-1 status table; fork-closure summary.

Deliverables (All On Disk at Cycle 5 Close)

Artefact	Status
docs/ear_v0_real_label_training_rubric.md docs/ear_v0_real_label_training_report.md	frozen at cycle 1; unchanged placeholders filled at cycle 5; \$1 caveat verbatim; SB tables populated
scripts/ear_v0/{ingest_ratings,extract_features_v0,train_v0,evaluate_successbars,leak_ablation_v0,run_all}.py + __init__.py data/ear_v0/{rubric_hash.txt, per_song_features/*.npy (43), held_out_folds.json, training_result.json, corn_head_v0_real.pt, held_out_predictions.tsv, leak_ablation_summary.json, verdict.json, anchor_preservation.json}	landed landed; byte-determinism × 2 confirmed

Artefact	Status
tests/test_ear_v0_real_label_training.py (≥14 cases)	green
tests/test_integration_cross_branch.py §57	green

Ledger events (cycles 1-5 total: 6 named + 2 housekeeping under -clone-0 suffix; cycle 6 zero per standby exemption):

1. _run/cycle_36_launched-clone-0 (status: validated per c35 Branch C convention)
2. _plan/ear_v0_real_label_training_rubric_frozen-clone-0
3. _infra/egress-probe-cycle-36-clone-0
4. M-EAR-1/real-label-training-v0 (in-progress → validated verdict roll-up at cycle 5, EAR_v0_INSUFFICIENT)
5. _infra/feature-cache-manifest-emitter-clone-0
6. _manager/background-job-supervision-clone-0
7. _run/cycle_36_closed-clone-0 (housekeeping)
8. _archive/cycle-36-scratch-clone-0 (housekeeping)

Plus durable handoff _manager/hold-pattern-recurrence-clone-0.

MINOR Findings (Worker-Flagged, Out of Scope This Range)

1. **Merge-report path fallback recurs** (fourth cycle observing /home/user/music-gen-instance/* write refusal: c31, c34, c35, c36). Worker suggestion: codify via _infra/merge-report-path-fallback-convention. c37 conductor should either open that infra milestone OR fix the harness path-mapping.
2. **Shared-single-file merge-report slot has a race window** — fallback path is overwritten across clones/cycles; if the merge conductor consumes asynchronously, later-written wins. Worker correctly identified as outside worker scope. c37 handoff: either (a) per-clone fallback path (e.g. merge_report_<fork>_<clone>.md) or (b) conductor-side snapshot-on-notify.

State-Machine Discipline (c29 Lemma Respected)

M-EAR-1/real-label-training-v0 is a peer sub-milestone under M-EAR-1. NOT a child of terminal-validated _manager/M-EAR-1-path-B-commit, M-EAR-1/{synthetic-label, head-regularization, feature-representation}-audit, OR M-EAR-1/armed-harness-fixture-reinforcement.

Load-Bearing Interpretation (Clone-0 Terminal Note)

The clone-0 negative-verdict outcome joins the c22/c23/c25 chassis invalidations as the **fifth piece of coherent evidence** that the c6 CORN chassis at $N \leq 43-55$ cannot beat trivial ordinal baselines under either synthetic or real labels:

Cycle	Milestone	Chassis Verdict
c22	M-EAR-1/synthetic-label-audit	insufficient at 55-clip valset
c23	M-EAR-1/head-regularization-audit	insufficient (anti-pattern locked)
c25	M-EAR-1/feature-representation-audit	insufficient (anti-pattern locked)

Cycle	Milestone	Chassis Verdict
c31	M-EAR-1/armed-harness-fixture-reinforcement	FIXTURE_READY (harness proven under synthetic dry-run)
c36 (this)	M-EAR-1/real-label-training-v0	EAR_v0_INSUFFICIENT on real 43-song labels

The c26 Path B commit stands validated in its rule-2 firing logic (defer to real labels). Its rule-2-outcome side (real labels also insufficient at partial corpus) is now empirically settled. **Corpus scale is the leading candidate variable to change; chassis redesign remains locked out.**

Standing Constraints (Unchanged)

- α pinned at 0.7469387071101908.
- SHA-256 tiebreak; no PRNG (AST-verified); no sidecar_nonfactor imports; no live network.
- Interpreter guard assert `sys.executable == '/usr/bin/python3'` on every new script.
- Byte-determinism $\times 2$ confirmed on all 6 named artefacts: `feature_cache_manifest.json`, `training_result.json`, `corn_head_v0_real.pt`, `held_out_predictions.tsv`, `leak_ablation_summary.json`, `verdict.json`.
- Read-only anchors preserved: c6 feature cache; c22 stability harness; c26 Path B commitment doc. Upstream c6 CORN chassis + feature pipeline NOT mutated.
- `c15 i4_stratified.py` NOT imported. Non-factor sidecar isolation contract preserved.
- Rated audio egress-blocked at `*.googlevideo.com` (unchanged 403; probe non-blocking per usual).
- Ledger hygiene: narrative field; `run_id="run-2026-08-28T040704Z"`; nested confidence: {level, rationale, asses UUID5 content-hash event_id}.
- Model artifact labeled `preview_partial_corpus_v0` in provenance per operator directive (NOT calibrated to full 80-song target; caveat prominent in report §1).

Anti-Patterns Locked (6-Count Stable)

c8 octave-suppression; c11 CLAP/VGGish embedding; c22 stability; c23 head-reg; c25 feature-representation — not re-attempted. c31 STILL_GAP / c35 A anti-pattern surface intact. **No SB threshold post-hoc adjustment** attempted; EAR_v0_INSUFFICIENT surfaced honestly per brief's explicit prohibition.

Merge Disposition

Fork 87da4f517029 closes **3/3 with no silent failures:**

Branch	Clone	Milestone	Verdict
A	clone-0 (this)	M-EAR-1/real-label-training-v0	EAR_v0_INSUFFICIENT
B	clone-1	M-GEN-1/palette-driven-batch-v3	PARAM_MOVES_AUDIO
C	clone-2	M-DAW-SPIKE-1/vst3-render-nondeterminism-characterization	MIXED

All first-class deliverables; each carries the frozen rubric SHA and pre-registration integrity intact.

Cycle-37 Handoff (Unchanged Verbatim from Cycle-5 Close)

Primary: - M-EAR-1/real-label-training-v1 — 80-song corpus + reweighting + yt-dlp era meta-data; SB thresholds frozen; caveat retained.

Highest priority (must resolve BEFORE v1 runs): - _manager/ear-sb3-statistic-degeneracy-on-singleton-artists-clone-0 — either corpus expansion with within-artist repeats or fallback statistic with small-cell adjustment. Discovered during SB3 leak-ablation on the 43-song corpus.

New from cycle-6 standby: - _infra/merge-report-path-fallback-convention — fourth-observation of the sandbox-write refusal pattern; worth first-class codification. Per-clone fallback path OR harness path-mapping fix.

Durable handoffs (carried across multiple prior cycles): - _manager/background-job-supervision-clone-0 (silent-background-job death: n=2 across c31 fixture + c36 extraction). - _manager/hold-pattern-recurrence-clone-0 (n=2 NULL cycles this arc). - Egress-probe-emission-convention. - promise_check-clone-suffix-false-negative-fix. - Rubric-committee-of-one checklist (post-c36 Branch C first rubric-authoring contradiction observation). - Assessor-enum discipline note.

Sibling handoffs (from siblings' merge reports): - M-GEN-1/palette-driven-batch-v4 (deeper sfizz perturbation, opcode-file rewrite per rule). - palette-v3 VST3 activation (Dexed-only strict-SMALL tolerance-gate primary; Surge XT bisection deferred; envelope-only both-plugin higher-risk).

Cumulative Progress

M-EAR-1 line (post-c36 Branch A):

Cycle	Milestone	Verdict
c22-c25	Path A chassis chain	exhausted (three-audit chain)
c26	_manager/M-EAR-1-path-B-commit	committed; three SBs frozen
c31	M-EAR-1/armed-harness-fixture-reinforcement	FIXTURE_READY (six-times-VALIDATED)
c36 (this)	M-EAR-1/real-label-training-v0	EAR_v0_INSUFFICIENT (Path B first real fire)

Path B armed harness fired for real at c36 on the operator's 43-song delivered corpus; egress unblock was not required (rated audio on-disk). The M-EAR-1 armed-not-fired posture that held across c26-c35 has transitioned to armed-and-fired-with-honest-negative-finding. The negative finding is the pre-registration methodology working as designed.

Pattern durability: rubric-first pre-registration discipline held for the substantive pipeline (rubric SHA committed before scripts, embedded in rubric_hash.txt, embedded verbatim in verdict.json at cycle-5 close). Zero post-hoc bar adjustment attempted despite the EAR_v0_INSUFFICIENT outcome; honest surfacing per operator directive.

c29 state-machine lemma respected: peer sub-milestone; ledger topology stays a DAG.

c32 fanout-namespace convention held under c33 harness-clone-namespace-guard: infra families -clone-0-suffixed, substantive M-* unsuffixed.

Silent-background-job supervision + Hold-Pattern recurrence both observed n=2 this fork; c37 owns crisp codification (_infra/merge-report-path-fallback-convention newly added).

Collision-modeling arc: closed at PARTIAL_BP_UNRESOLVED_SHAPE (c30 terminal); no re-opening proposed.

Session terminal for clone-0's role in fork 87da4f517029. No further work permitted on this milestone by clone-0.
